THE AUTHOR

David H. Ahl is a computer hacker from way back. He learned to program in 1956 on a Burroughs B-200 in Algol and CAL (Cornell Assembly Language) and has worked with such diverse beasts as the Bendix G-15 and G-20, IBM 650, 704, 7090, 1401, 1130, 360/40 and 360/50, CDC 3200 and 3600, GE 115, 235, and 635, HP 2000, NCR Century 50 and 100, DEC PDP-8, 10, 11, 12 and 15 as well as virtually every microcomputer made to the present day.

He wrote his first computer game about a week after learning to program and has been involved ever since in both serious games (Carnegie-Mellon management game, U.S. energy simulation) as well as games for fun.
His career has been intertwined with computers in market research and new product forecasting, educational research, marketing of computers to schools and colleges, teaching, and lecturing. Now, as Publisher of *Creative Computing* magazine he is continuing to pioneer new computer applications for fun and fortune.

ACKNOWLEDGEMENTS

With a book like this one, it's difficult to know where to begin with acknowledgements.
Game Authors. Thank you, each and every one for creating your game in the first place.
Steve North. For working way beyond the call of duty transcribing, modifying, converting, and debugging all the games in MITS BASIC. A truly herculean task!
John Lees. For assisting Steve North in the conversion effort.
Jim West. For listing and playing all the "standard" BASIC games from my timesharing accounts.
Teletype Corporation. For the loan of the 43 Teleprinter to do the listings and runs.
Bob Albrecht. For his continuing contribution to the world of computer games and for setting me straight as to who wrote what.
Dartmouth College. For recognizing games as a legitimate educational tool and allowing them to be written and played on the Dartmouth timesharing system.
Microcomputer Manufacturers. For putting computer games within the reach of every American in the comfort of their own home.

To Derek, the game player ....

The Games 

Acey Ducey

This is a simulation of the Acey Ducey card game. In the game, the dealer (the computer) deals two cards face up. You have an option to bet or not to bet depending on whether or not you feel the next card dealt will have a value between the first two.

Your initial money (Q) is set to $100; you may alter Statement 110 if you want to start with more or less than $100. The game keeps going on until you lose all your money or interrupt the program.

The original program author was Bill Palmby of Prairie View, Illinois.

```
          ACEY DUCEY CARD GAME
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

ACEY-DUCEY IS PLAYED IN THE FOLLOWING MANNER
THE DEALER (COMPUTER) DEALS TWO CARDS FACE UP
YOU HAVE AN OPTION TO BET OR NOT BET DEPENDING
ON WHETHER OR NOT YOU FEEL THE CARD WILL HAVE
A VALUE BETWEEN THE FIRST TWO.
IF YOU DO NOT WANT TO BET, INPUT A 0
YOU NOW HAVE  100  DOLLARS

HERE ARE YOUR NEXT TWO CARDS
 2
 9

WHAT IS YOUR BET? 25
QUEEN
SORRY, YOU LOSE
YOU NOW HAVE  75  DOLLARS

HERE ARE YOUR NEXT TWO CARDS
 4
 10

WHAT IS YOUR BET? 25
 10
SORRY, YOU LOSE
YOU NOW HAVE  50  DOLLARS

HERE ARE YOUR NEXT TWO CARDS
 8
QUEEN

WHAT IS YOUR BET? 0
CHICKEN!!

HERE ARE YOUR NEXT TWO CARDS
 6
 10

WHAT IS YOUR BET? 20
 10
SORRY, YOU LOSE
YOU NOW HAVE  30  DOLLARS

HERE ARE YOUR NEXT TWO CARDS
 9

Animal

Unlike other computer games in which the computer picks a number or letter and you must guess what it is, in this game *you* think of an animal and the *computer* asks you questions and tries to guess the name of your animal. If the computer guesses incorrectly, it will ask you for a question that differentiates the animal it guessed from the one you were thinking of. In this way the computer "learns" new animals. Questions to differentiate new animals should be input without a question mark.

This version of the game does not have a SAVE feature. If your system allows, you may modify the program to save array A$, then reload the array when you want to play the game again. This way you can save what the computer learns over a series of games.

At any time if you reply "LIST" to the question "ARE YOU THINKING OF AN ANIMAL," the computer will tell you all the animals it knows so far.

The program starts originally by knowing only FISH and BIRD. As you build up a file of animals you should use broad, general questions first and then narrow down to more specific ones with later animals. For example, if an elephant was to be your first animal, the computer would ask for a question to distinguish an elephant from a bird. Naturally there are hundreds of possibilities, however, if you plan to build a large file of animals a good question would be "IS IT A MAMMAL."

This program can be easily modified to deal with categories of things other than animals by simply modifying the initial data in Line 530 and the dialogue references to animal in Lines 10, 40, 50, 130, 230, 240, and 600. In an educational environment, this would be a valuable program to teach the distinguishing characteristics of many classes of objects — rock formations, geography, marine life, cell structures, etc.

Originally developed by Arthur Luehrmann at Dartmouth College, Animal was subsequently shortened and modified by Nathan Teichholtz at DEC and Steve North at Creative Computing.

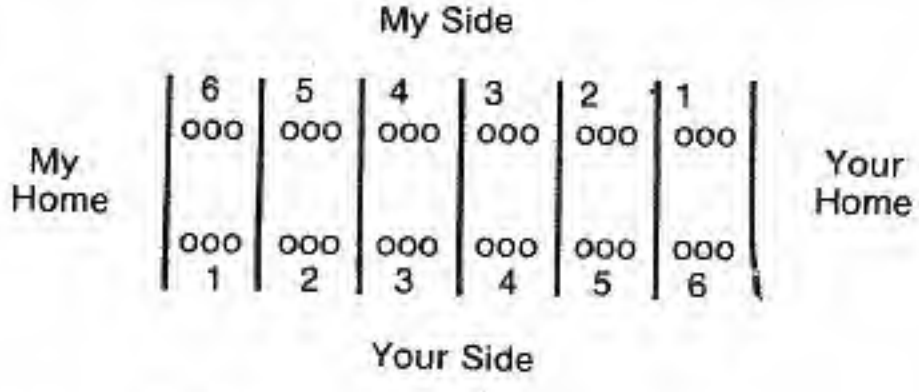
Awari



Awari is an ancient African game played with seven sticks and thirty-six stones or beans laid out as shown above. The board is divided into six compartments or pits on each side. In addition, there are two special home pits at the ends.

A move is made by taking all of the beans from any (non-empty) pit on your own side. Starting from the pit to the right of this one, these beans are 'sown' one in each pit working around the board anticlockwise.

A turn consists of one or two moves. If the last bean of your move is sown in your own home you may take a second move.

If the last bean sown in a move lands in an empty pit, provided that the opposite pit is not empty, all the beans in the opposite pit, together with the last bean sown are 'captured' and moved to the player's home.

When either side is empty, the game is finished. The player with most beans in his home has won.

In the computer version, the board is printed as 14 numbers representing the 14 pits.

```
      3  3  3  3  3  3
0                       0
      3  3  3  3  3  3
```

The pits on your (lower) side are numbered 1-6 from left to right. The pits on my (the computer's) side are numbered from my left (your right).

To make a move you type in the number of a pit. If the last bean lands in your home, the computer types 'AGAIN?' and you then type in your second move.

The computer's move is typed, followed by a diagram of the board in its new state. The computer always offers you the first move. This is considered to be a slight advantage.

There is a learning mechanism in the program that causes the play of the computer to improve as it plays more games.

This version of Awari is adopted from one originally written by Geoff Wyvill of Bradford, Yorkshire, England.

Bagels

In this game, the computer picks a 3-digit secret number using the digits 0 to 9 and you attempt to guess what it is. You are allowed up to twenty guesses. No digit is repeated. After each guess the computer will give you clues about your guess as follows:

PICO	One digit is correct, but in the wrong place
FERMI	One digit is in the correct place
BAGELS	No digit is correct

You will learn to draw inferences from the clues and, with practice, you'll learn to improve your score. There are several good strategies for playing Bagels. After you have found a good strategy, see if you can improve it. Or try a different strategy altogether and see if it is any better. While the program allows up to twenty guesses, if you use a good strategy it should not take more than eight guesses to get any number.

The original authors of this program are D. Resek and P. Rowe of the Lawrence Hall of Science, Berkeley, California.

Banner

This program creates a large banner on a terminal of any message you input. The length of the message may be as long as a string variable permits in your version of BASIC. The letters may be any dimension you wish although the letter height plus distance from left-hand side should not exceed 6 inches. Experiment with the height and width until you get a pleasing effect on whatever terminal you are using. The permissable letters and characters are defined in the data statements 899 through 940.

Many people seem to have trouble getting this program to work, however, after thorough checking we guarantee that the version presented have runs correctly. We suspect the problem is dependent upon the Basic itself and the way it reads and restores data files.

This program was written by Leonard Rosendust of Brooklyn, New York.

Basketball

This program simulates a game of basketball between Dartmouth College and an opponent of your choice. You are the Dartmouth captain and control the type of shot and defense during the course of the game.

There are four types of shots: 1. Long Jump Shot (30 ft.), 2. Short Jump Shot (15 ft.), 3. Lay Up, and 4. Set Shot. Both teams use the same defense, but you may call it: Press (6), Man-to-man (6.5), Zone (7), or None (7.5). To change defense, type "0" as your next shot.

Note: The game is biased slightly in favor of Dartmouth. The average probability of a Dartmouth shot being good is 62.95% compared to a probability of 61.85% for their opponent. (This makes the sample run slightly remarkable in that Cornell won by a score of 45 to 42. Hooray for the Big Red!)

Charles Bacheller of Dartmouth College was the original author of this game.

```
                BASKETBALL
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS IS DARTMOUTH COLLEGE BASKETBALL.  YOU WILL BE DARTMOUTH
  CAPTAIN AND PLAYMAKER.  CALL SHOTS AS FOLLOWS:  1. LONG
  (30 FT.) JUMP SHOT; 2. SHORT (15 FT.) JUMP SHOT; 3. LAY
  UP; 4. SET SHOT.
BOTH TEAMS WILL USE THE SAME DEFENSE.  CALL DEFENSE AS
FOLLOWS:  6. PRESS; 6.5 MAN-TO MAN; 7. ZONE; 7.5 NONE.
  TO CHANGE DEFENSE, JUST TYPE  0  AS YOUR NEXT SHOT.
YOUR STARTING DEFENSE WILL BE? 7

CHOOSE YOUR OPPONENT? CORNELL

Batnum

The game starts with an imaginary pile of objects, coins for example. You and your opponent (the computer) alternately remove objects from the pile. You specify in advance the minimum and maximum number of objects that can be taken on each turn. You also specify in advance how winning is defined: 1. To take the last object or 2. To avoid taking the last object. You may also determine whether you or the computer go first.

The strategy of this game is based on modulo arithmetic. If the maximum number of objects a player may remove in a turn is M, then to gain a winning position a player at the end of his turn must leave a stack of 1 modulo (M+1) coins. If you don't understand this, play the game 23 Matches first, then BATNUM, and have fun!

BATNUM is a generalized version of a great number of manual remove-the-object games. The original computer version was written by one of the two originators of the BASIC language, John Kemeny of Dartmouth College.

```
                  BATNUM
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS PROGRAM IS A 'BATTLE OF NUMBERS'
GAME, WHERE THE COMPUTER IS YOUR OPPONENT

THE GAME STARTS WITH AN ASSUMED PILE OF OBJECTS.
YOU AND YOUR OPPONENT ALTERNATELY REMOVE OBJECTS FROM
THE PILE.  WINNING IS DEFINED IN ADVANCE AS TAKING THE
LAST OBJECT OR NOT.  YOU CAN ALSO SPECIFY SOME OTHER
BEGINNING CONDITIONS.  DON'T USE ZERO, HOWEVER, IN
PLAYING THE GAME.

Battle

BATTLE is based on the popular game Battleship which is primarily played to familiarize people with the location and designation of points on a coordinate plane.

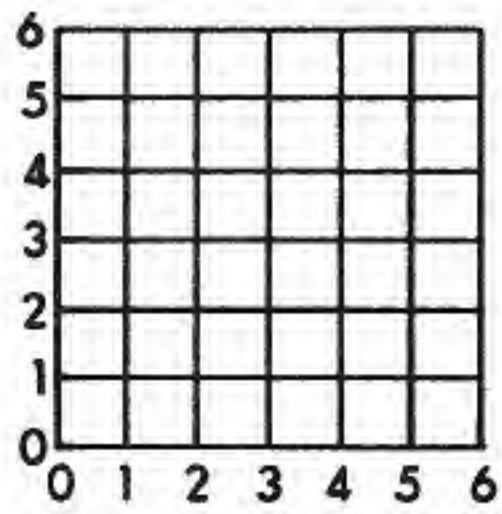
BATTLE first randomly sets up the bad guys' fleet disposition on a 6 by 6 matrix or grid. The fleet consists of six ships: Two destroyers (ships number 1 and 2) which are two units long, two cruisers (ships number 3 and 4) which are three units long and two aircraft carriers (ships number 5 and 6) which are four units long. The program then prints out this fleet disposition in a coded or disguised format (see the sample computer print-out). You then proceed to sink the various ships by typing in the coordinates (two digits, each from 1 to 6, separated by a comma) of the place where you want to drop a bomb, if you'll excuse the expression. The computer gives the appropriate responses (splash, hit, etc.) which you should record on a 6 by 6 matrix. You are thus building a representation of the actual fleet disposition which you will hopefully use to decode the coded fleet disposition printed out by the computer. Each time a ship is sunk, the computer prints out which ships have been sunk so far and also gives you a "SPLASH/HIT RATIO."

The first thing you should learn is how to locate and designate positions on the matrix, and specifically the difference between "3,4" and "4,3." Our method corresponds to the location of points on the coordinate plane rather than the location of numbers in a standard algebraic matrix: the first number gives the column counting from left to right and the second number gives the row counting from bottom to top.

The second thing you should learn about is the splash/hit ratio. "What is a ratio?" A good reply is "It's a fraction or quotient." Specifically, the splash/hit ratio is the number of splashes divided by the number of hits. If you had 9 splashes and 15 hits, the ratio would be 9/15 or 3/5, both of which are correct. The computer would give this splash/hit ratio as .6.

The main objective and primary educational benefit of BATTLE comes from attempting to decode the bad guys' fleet disposition code. To do this, you must make a comparison between the coded matrix and the actual matrix which you construct as you play the game.

The original author of both the program and these descriptive notes is Ray Westergard of the Lawrence Hall of Science, Berkeley, California.



```

Blackjack

This is a simulation of the card game of Blackjack or 21, Las Vegas style. This rather comprehensive version allows for up to seven players. On each hand each player may get another card (a hit), stand, split a hand in the event two identical cards were received or double down. Also, the dealer will ask for an insurance bet if he has an exposed ace.

Cards are automatically reshuffled as the 51st card is reached. For greater realism, you may wish to change this to the 41st card in Line 110. Actually, fanatical purists will want to modify the program so it uses three decks of cards instead of just one.

This program originally surfaced at Digital Equipment Corp.; the author is unknown.

```
                BLACKJACK
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES
THIS IS THE GAME OF 21.  AS MANY AS 7 PLAYERS MAY PLAY THE
GAME.  ON EACH DEAL, BETS WILL BE ASKED FOR, AND THE
PLAYERS' BETS SHOULD BE TYPED IN.  THE CARDS WILL THEN BE
DEALT, AND EACH PLAYER IN TURN PLAYS HIS HAND.  THE
FIRST RESPONSE SHOULD BE EITHER 'D', INDICATING THAT THE
PLAYER IS DOUBLING DOWN, 'S', INDICATING THAT HE IS
STANDING, 'H', INDICATING HE WANTS ANOTHER CARD, OR '/',
INDICATING THAT HE WANTS TO SPLIT HIS CARDS.  AFTER THE
INITIAL RESPONSE, ALL FURTHER RESPONSES SHOULD BE 'S' OR
'H', UNLESS THE CARDS WERE SPLIT, IN WHICH CASE DOUBLING
DOWN IS AGAIN PERMITTED.  IN ORDER TO COLLECT FOR
BLACKJACK, THE INITIAL RESPONSE SHOULD BE 'S'.

Bombardment

BOMBARDMENT is played on two, 5x5 grids or boards with 25 outpost locations numbered 1 to 25. Both you and the computer have four platoons of troops that can be located at any four outposts on your respective grids.

At the start of the game, you locate (or hide) your four platoons on your grid. The computer does the same on its grid. You then take turns firing missiles or bombs at each other's outposts trying to destroy all four platoons. The one who finds all four opponents' platoons first, wins.

This program was slightly modified from the original written by Martin Burdash of Parlin, New Jersey.

```
                BOMBARDMENT
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

 YOU ARE ON A BATTLEFIELD WITH 4 PLATOONS AND YOU
 HAVE 25 OUTPOSTS AVAILABLE WHERE THEY MAY BE PLACED.
 YOU CAN ONLY PLACE ONE PLATOON AT ANY ONE OUTPOST.
 THE COMPUTER DOES THE SAME WITH ITS FOUR PLATOONS.
 THE OBJECT OF THE GAME IS TO FIRE MISSILES AT THE
 OUTPOSTS OF THE COMPUTER.  IT WILL DO THE SAME TO YOU.
 THE ONE WHO DESTROYS ALL FOUR OF THE ENEMY'S PLATOONS
 FIRST IS THE WINNER.

 GOOD LUCK... AND TELL US WHERE YOU WANT THE BODIES SENT!

 TEAR OFF MATRIX AND USE IT TO CHECK OFF THE NUMBERS.

  1     2     3     4     5
  6     7     8     9    10

Bombs Away

In this program, you fly a World War II bomber for one of the four protagonists of the war. You then pick your target or the type of plane you are flying. Depending upon your flying experience and the quality of the enemy defenders, you then may accomplish your mission, get shot down, or make it back through enemy fire. In any case, you get a chance to fly again.

David Ahl modified the original program which was created by David Sherman while a student at Curtis Jr. High School, Sudbury, Massachusetts.

```
          BOMBS AWAY
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

YOU ARE A PILOT IN A WORLD WAR II BOMBER.
WHAT SIDE -- ITALY(1), ALLIES(2), JAPAN(3), GERMANY(4)? 2
AIRCRAFT -- LIBERATOR(1), B-29(2), B-17(3), LANCASTER(4)? 4

YOU'RE BUSTING A GERMAN HEAVY WATER PLANT IN THE RUHR.

HOW MANY MISSIONS HAVE YOU FLOWN? 25

DIRECT HIT!!!!  43 KILLED.
MISSION SUCCESSFUL.

ANOTHER MISSION (Y OR N)? Y
YOU ARE A PILOT IN A WORLD WAR II BOMBER.
WHAT SIDE -- ITALY(1), ALLIES(2), JAPAN(3), GERMANY(4)? 3
YOU'RE FLYING A KAMIKAZE MISSION OVER THE USS LEXINGTON.
YOUR FIRST KAMIKAZE MISSION(Y OR N)? Y

* * * * BOOM * * * *
YOU HAVE BEEN SHOT DOWN.....
DEARLY BELOVED, WE ARE GATHERED HERE TODAY TO PAY OUR
LAST TRIBUTE...

ANOTHER MISSION (Y OR N)? Y
YOU ARE A PILOT IN A WORLD WAR II BOMBER.
WHAT SIDE -- ITALY(1), ALLIES(2), JAPAN(3), GERMANY(4)? 1
YOUR TARGET -- ALBANIA(1), GREECE(2), NORTH AFRICA(3)? 1

SHOULD BE EASY -- YOU'RE FLYING A NAZI-MADE PLANE.

HOW MANY MISSIONS HAVE YOU FLOWN? 200
MISSIONS, NOT MILES...
150 MISSIONS IS HIGH EVEN FOR OLD-TIMERS.
NOW THEN, HOW MANY MISSIONS HAVE YOU FLOWN? 20
```

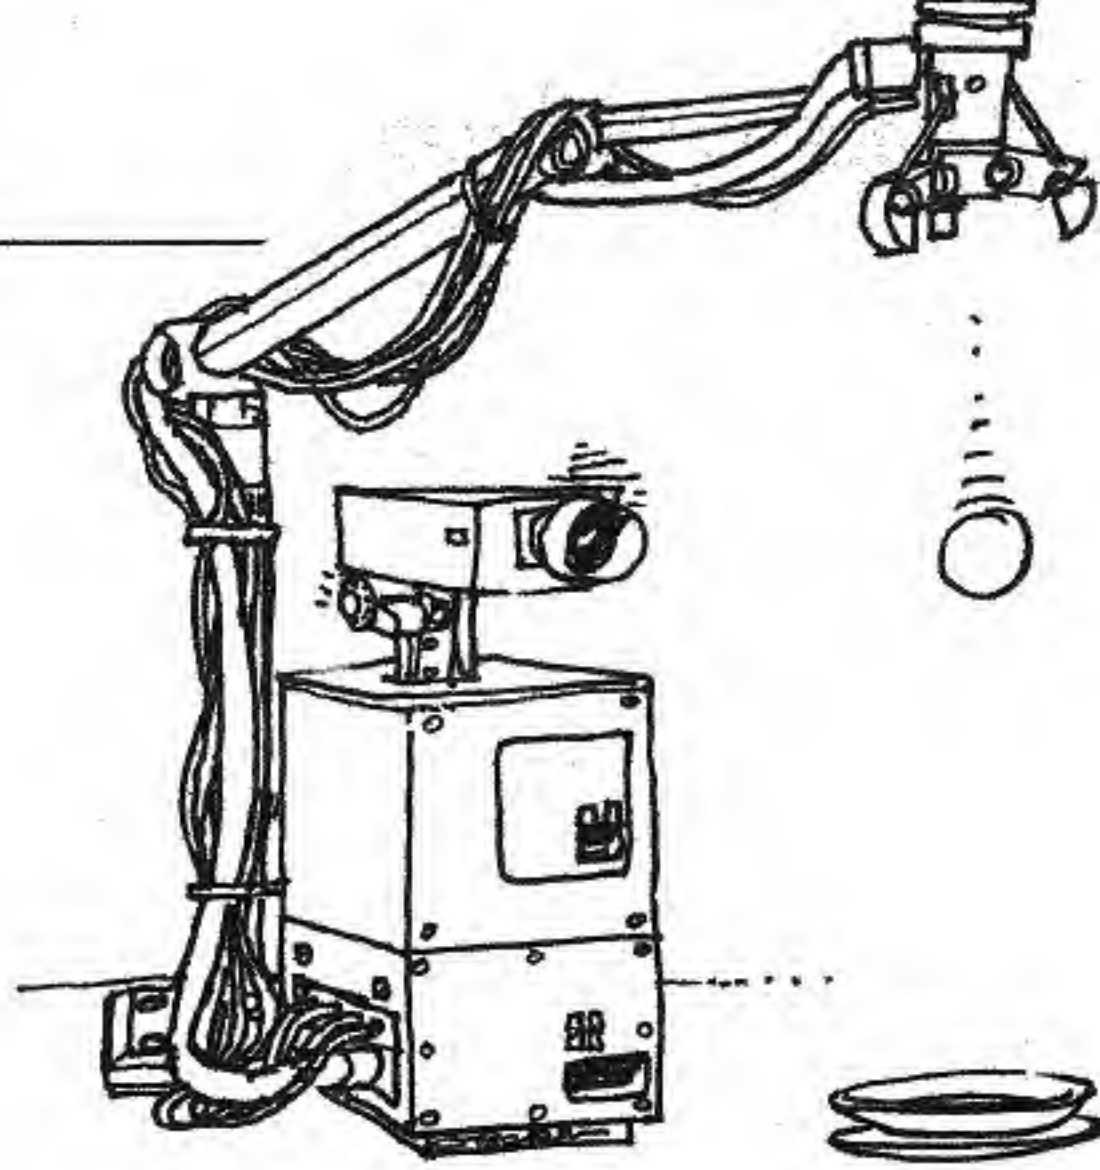
Bounce



This program plots a bouncing ball. Most computer plots run along the paper in the terminal (top to bottom); however, this plot is drawn horizontally on the paper (left to right).

You may specify the initial velocity of the ball and the coefficient of elasticity of the ball (a superball is about 0.85 — other balls are much less). You also specify the time increment to be used in "strobing" the flight of the ball. In other words, it is as though the ball is thrown up in a darkened room and you flash a light at fixed time intervals and photograph the progress of the ball.

The program was originally written by Val Skalabrin while he was at DEC.

```
                BOUNCE
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS SIMULATION LETS YOU SPECIFY THE INITIAL VELOCITY
OF A BALL THROWN STRAIGHT UP, AND THE COEFFICIENT OF
ELASTICITY OF THE BALL.  PLEASE USE A DECIMAL FRACTION
COEFFICIENCY (LESS THAN 1).

YOU ALSO SPECIFY THE TIME INCREMENT TO BE USED IN
'STROBING' THE BALL'S FLIGHT (TRY .1 INITIALLY).

TIME INCREMENT (SEC)? .1

VELOCITY (FPS)? 30

COEFFICIENT? .9

Bowling

This is a simulated bowling game for up to four players. You play 10 frames. To roll the ball, you simply type "ROLL." After each roll, the computer will show you a diagram of the remaining pins ("0" means the pin is down, "+" means it is still standing), and it will give you a roll analysis:

GUTTER
STRIKE
SPARE
ERROR (on second ball if pins still standing)

Bowling was written by Paul Peraino while a student at Woodrow Wilson High School, San Francisco, California.

Boxing

This program simulates a three-round Olympic boxing match. The computer coaches one of the boxers and determines his punches and defenses, while you do the same for your boxer. At the start of the match, you may specify your man's best punch and his vulnerability.

There are approximately seven major punches per round, although this may be varied in Statement 185. The best two out of three rounds wins.

Jesse Lynch of St. Paul, Minnesota created this program.

```
                BOXING
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

BOXING OLYMPIC STYLE (3 ROUNDS -- 2 OUT OF 3 WINS)
WHAT IS YOUR OPPONENT'S NAME? MEATHEAD
INPUT YOUR MAN'S NAME? SUPERMAN
DIFFERENT PUNCHES ARE 1 FULL SWING 2 HOOK 3 UPPERCUT 4 JAB
WHAT IS YOUR MAN'S BEST? 3
WHAT IS HIS VULNERABILITY? 2
MEATHEAD'S ADVANTAGE IS 2 AND VULNERABILITY IS SECRET.
ROUND 1 BEGINS...

SUPERMAN'S PUNCH? 1
SUPERMAN SWINGS AND HE CONNECTS!
SUPERMAN IS ATTACKED BY AN UPPERCUT (OH,OH)...
 AND MEATHEAD CONNECTS...
SUPERMAN'S PUNCH? 4
SUPERMAN JABS AT MEATHEAD'S HEAD SUPERMAN'S PUNCH? 3

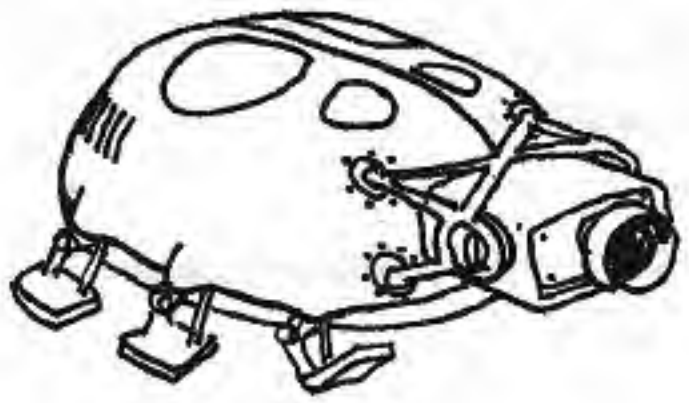
Bug



The object of this game is to finish your drawing of a bug before the computer finishes.

You and the computer roll a die alternately with each number standing for a part of the bug. You must add the parts in the right order; in other words, you cannot have a neck until you have a body, you cannot have a head until you have a neck, and so on. After each new part has been added, you have the option of seeing pictures of the two bugs.

If you elect to see all the pictures, this program has the ability of consuming well over six feet of terminal paper per run. We can only suggest recycling the paper by using the other side.

Brian Leibowitz wrote this program while in the 7th grade at Harrison Jr-Sr High School in Harrison, New York.

```
                BUG
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THE GAME BUG
I HOPE YOU ENJOY THIS GAME.

DO YOU WANT INSTRUCTIONS? YES
THE OBJECT OF BUG IS TO FINISH YOUR BUG BEFORE I FINISH
MINE.  EACH NUMBER STANDS FOR A PART OF THE BUG BODY.
I WILL ROLL THE DIE FOR YOU, TELL YOU WHAT I ROLLED FOR YOU
WHAT THE NUMBER STANDS FOR, AND IF YOU CAN GET THE PART.
IF YOU CAN GET THE PART I WILL GIVE IT TO YOU.
THE SAME WILL HAPPEN ON MY TURN.
IF THERE IS A CHANGE IN EITHER BUG I WILL GIVE YOU THE
OPTION OF SEEING THE PICTURES OF THE BUGS.
THE NUMBERS STAND FOR PARTS AS FOLLOWS:
NUMBER        PART          NUMBER OF PART NEEDED
1             BODY          1
2             NECK          1
3             HEAD          1
4             FEELERS       2
5             TAIL          1
6             LEGS          6

YOU ROLLED A  1
1=BODY
YOU NOW HAVE A BODY.
I ROLLED A 4
4=FEELERS
I DO NOT HAVE A HEAD.

Bullfight

In this simulated bullfight, you are the matador — i.e., the one with the principal role and the one who must kill the bull or be killed (or run from the ring).

On each pass of the bull, you may try:

0 Veronica (dangerous inside move of the cape)
1 Less dangerous outside move of the cape
2 Ordinary swirl of the cape

Or you may try to kill the bull:

4 Over the horns
5 In the chest

The crowd will determine what award you deserve, posthumously if necessary. The braver you are, the better the award you receive. It's nice to stay alive too. The better the job the picadores and toreadores do, the better your chances.

David Sweet of Dartmouth wrote the original version of this program. It was then modified by students at Lexington High School and finally by Steve North of Creative Computing.

```
                  BULL
  CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES
HELLO, ALL YOU BLOODLOVERS AND AFICIONADOS
HERE IS YOUR BIG CHANCE TO KILL A BULL

ON EACH PASS OF THE BULL, YOU MAY TRY
0 - VERONICA (DANGEROUS INSIDE MOVE OF THE CAPE)
1 - LESS DANGEROUS OUTSIDE MOVE OF THE CAPE
2 - ORDINARY SWIRL OF THE CAPE

INSTEAD OF THE ABOVE, YOU MAY TRY TO KILL THE BULL
ON ANY TURN: 4 (OVER THE HORNS), 5 (IN THE CHEST)
BUT IF I WERE YOU,
I WOULDN'T TRY IT BEFORE THE SEVENTH PASS.

THE CROWD WILL DETERMINE WHAT AWARD YOU DESERVE
POSTHUMOUSLY IF NECESSARY
THE BRAVER YOU ARE, THE BETTER THE AWARD YOU RECEIVE

THE BETTER A JOB THE PICADORES AND TOREADORES DO,
THE BETTER YOUR CHANCES ARE

YOU HAVE DRAWN A POOR BULL.

THE PICADORES DID A AWFUL JOB.
 2 OF THE HORSES OF THE PICADORES KILLED.
 1 OF THE PICADORES KILLED.

THE TOREADORES DID A AWFUL JOB.
 2 OF THE TOREADORES KILLED.

PASS NUMBER 1
THE BULL IS CHARGING AT YOU!  YOU ARE THE MATADOR--
DO YOU WANT TO KILL THE BULL? NO
WHAT MOVE DO YOU MAKE WITH THE CAPE? 0

PASS NUMBER 2
THE BULL IS CHARGING AT YOU!  YOU ARE THE MATADOR--
DO YOU WANT TO KILL THE BULL? NO
WHAT MOVE DO YOU MAKE WITH THE CAPE? 1

PASS NUMBER 3
HERE COMES THE BULL.  TRY FOR A KILL? NO
CAPE MOVE? 1

PASS NUMBER 4
HERE COMES THE BULL.  TRY FOR A KILL? NO
CAPE MOVE? 0

PASS NUMBER 5
HERE COMES THE BULL.  TRY FOR A KILL? NO
CAPE MOVE? 2

PASS NUMBER 6
HERE COMES THE BULL.  TRY FOR A KILL? NO
CAPE MOVE? 1

PASS NUMBER 7
HERE COMES THE BULL.  TRY FOR A KILL? NO
CAPE MOVE? 0

PASS NUMBER 8
HERE COMES THE BULL.  TRY FOR A KILL? YES
IT IS THE MOMENT OF TRUTH.
HOW DO YOU TRY TO KILL THE BULL? 5
THE BULL HAS GORED YOU
YOU ARE DEAD

THE CROWD AWARDS YOU
ONE EAR OF THE BULL

ADIOS

DO YOU WANT INSTRUCTIONS? NO

YOU HAVE DRAWN A SUPERB BULL.
GOOD LUCK.  YOU'LL NEED IT.

THE PICADORES DID A SUPERB JOB.

THE TOREADORES DID A SUPERB JOB.

PASS NUMBER 1
THE BULL IS CHARGING AT YOU!  YOU ARE THE MATADOR--
DO YOU WANT TO KILL THE BULL? NO
WHAT MOVE DO YOU MAKE WITH THE CAPE? 2
THE BULL HAS GORED YOU
YOU ARE DEAD

THE CROWD AWARDS YOU
ONE EAR OF THE BULL

ADIOS

Bullseye

In this game, up to 20 players throw darts at a target with 10-, 20-, 30-, and 40-point zones. The objective is to get 200 points.

You have a choice of three methods of throwing:

Throw	Description	Probable Score
1	Fast overarm	Bullseye or complete miss
2	Controlled overarm	10, 20, or 30 points
3	Underarm	Anything

You will find after playing a while that different players will swear by different strategies. However, consider the expected score per throw by always using Throw 3 (program line 220):

Score (S)	Probability (P)	S x P
40	1.00-.95 = .05	2
30	.95-.75 = .20	6
30	.75-.45 = .30	6
10	.45-.05 = .40	4
0	.05-.00 = .05	0
Expected score per throw =		18

Calculate the expected scores for the other throws and you may be surprised!

The program was written by David Ahl of Creative Computing.

IN THIS GAME, UP TO 20 PLAYERS THROW DARTS AT A TARGET
WITH 10, 20, 30, AND 40 POINT ZONES.  THE OBJECTIVE IS
TO GET 200 POINTS.

THROW           DESCRIPTION             PROBABLE SCORE
 1              FAST OVERARM            BULLSEYE OR COMPLETE MISS
 2              CONTROLLED OVERARM      10, 20 OR 30 POINTS
 3              UNDERARM                ANYTHING

HOW MANY PLAYERS? 2

NAME OF PLAYER # 1 ? STEVE
NAME OF PLAYER # 2 ? DARTH

ROUND 1

STEVE'S THROW? 1
30-POINT ZONE!
TOTAL SCORE = 30

DARTH'S THROW? 2
WHEW!  10 POINTS.
TOTAL SCORE = 10

ROUND 2

STEVE'S THROW? 3
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 30

DARTH'S THROW? 1
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 10

ROUND 3

STEVE'S THROW? 1
20-POINT ZONE
TOTAL SCORE = 50

DARTH'S THROW? 1
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 10

ROUND 4

STEVE'S THROW? 2
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 50

DARTH'S THROW? 2
20-POINT ZONE
TOTAL SCORE = 30

ROUND 5

STEVE'S THROW? 1
BULLSEYE!!  40 POINTS!
TOTAL SCORE = 90

DARTH'S THROW? 1
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 30

ROUND 6

STEVE'S THROW? 1
30-POINT ZONE!
TOTAL SCORE = 120

DARTH'S THROW? 2
WHEW!  10 POINTS.
TOTAL SCORE = 40

ROUND 7

STEVE'S THROW? 2
WHEW!  10 POINTS.
TOTAL SCORE = 130

DARTH'S THROW? 3
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 40

ROUND 8

STEVE'S THROW? 1
BULLSEYE!!  40 POINTS!
TOTAL SCORE = 170

DARTH'S THROW? 2
WHEW!  10 POINTS.
TOTAL SCORE = 50

ROUND 9

STEVE'S THROW? 2
20-POINT ZONE
TOTAL SCORE = 190

DARTH'S THROW? 1
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 50

ROUND 10

STEVE'S THROW? 2
20-POINT ZONE
TOTAL SCORE = 210

DARTH'S THROW? 1
MISSED THE TARGET!  TOO BAD.
TOTAL SCORE = 50

WE HAVE A WINNER!!

STEVE SCORED 210 POINTS.

THANKS FOR THE GAME.

Buzzword

This program is an invaluable aid for preparing speeches and briefings about educational technology. This buzzword generator provides sets of three highly-acceptable words to work into your material. Your audience will never know that the phrases don't really mean much of anything because they sound so great! Full instructions for running are given in the program.

This version of Buzzword was written by David Ahl.

```
          BUZZWORD GENERATOR
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS PROGRAM PRINTS HIGHLY ACCEPTABLE PHRASES IN
'EDUCATOR-SPEAK'THAT YOU CAN WORK INTO REPORTS
AND SPEECHES.  WHENEVER A QUESTION MARK IS PRINTED,
TYPE A 'Y' FOR ANOTHER PHRASE OR 'N' TO QUIT.

HERE'S THE FIRST PHRASE:
ABILITY VERTICAL AGE PERFORMANCE

? Y
DIFFERENTIATED CREATIVE FACILITY

? Y
MANIPULATIVE LEARNING ENVIRONMENT

? Y
ABILITY CREATIVE GROUPING

? Y
TAVISTOCK NON-GRADED REINFORCEMENT

? Y
MODULAR MOTIVATIONAL FACILITY

? Y
TAVISTOCK HUMANISTIC REINFORCEMENT

? Y
DISCOVERY MOTIVATIONAL GROUPING

? Y
HETEROGENEOUS VERTICAL AGE PROCESS

? Y
ABILITY LEARNING PROCESS

? Y
FLEXIBLE TRAINING CORE CURRICULUM

? N
COME BACK WHEN YOU NEED HELP WITH ANOTHER REPORT!

Calendar

This program prints out a calendar for any year. You must specify the starting day of the week of the year in Statement 130. (Sunday (0), Monday (-1), Tuesday (-2), etc.). You can determine this by using the program WEEKDAY. You must also make two changes for leap years in Statements 360 and 620. The program listing describes the necessary changes. Running the program produces a nice 12-month calendar.

The program was written by Geoffrey Chase of the Abbey, Portsmouth, Rhode Island.

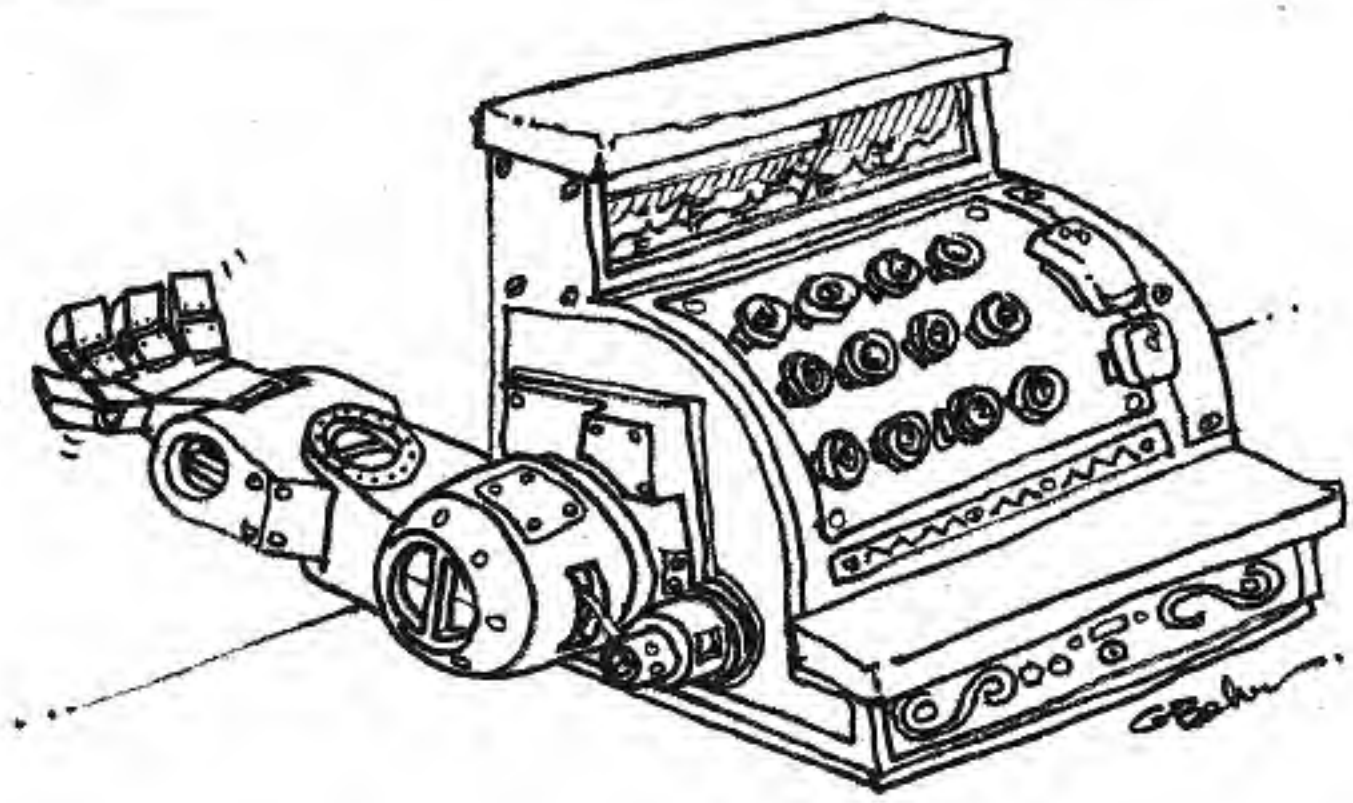
Change



In this program, the computer pretends it is the cashier at your friendly neighborhood candy store. You tell it the cost of the item(s) you are buying, the amount of your payment, and it will automatically (!) determine your correct change. Aren't machines wonderful? Dennis Lunder of People's Computer Company wrote this program.

```
                CHANGE
  CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

I, YOUR FRIENDLY MICROCOMPUTER, WILL DETERMINE
THE CORRECT CHANGE FOR ITEMS COSTING UP TO $100.

COST OF ITEM? 80.80
AMOUNT OF PAYMENT? 100
YOUR CHANGE, $ 19.20
 1 TEN DOLLAR BILL(S)
 1 FIVE DOLLARS BILL(S)
 4 ONE DOLLAR BILL(S)
 1 DIME(S)
 1 NICKEL(S)
 5 PENNY(S)
THANK YOU, COME AGAIN.

COST OF ITEM? .19
AMOUNT OF PAYMENT? 1.00
YOUR CHANGE, $ .81
 1 ONE HALF DOLLAR(S)
 1 QUARTER(S)
 1 NICKEL(S)
 1 PENNY(S)
THANK YOU, COME AGAIN.

COST OF ITEM? 1.01
AMOUNT OF PAYMENT? 5
YOUR CHANGE, $ 3.99
 3 ONE DOLLAR BILL(S)
 1 ONE HALF DOLLAR(S)
 1 QUARTER(S)
 2 DIME(S)
 4 PENNY(S)
```

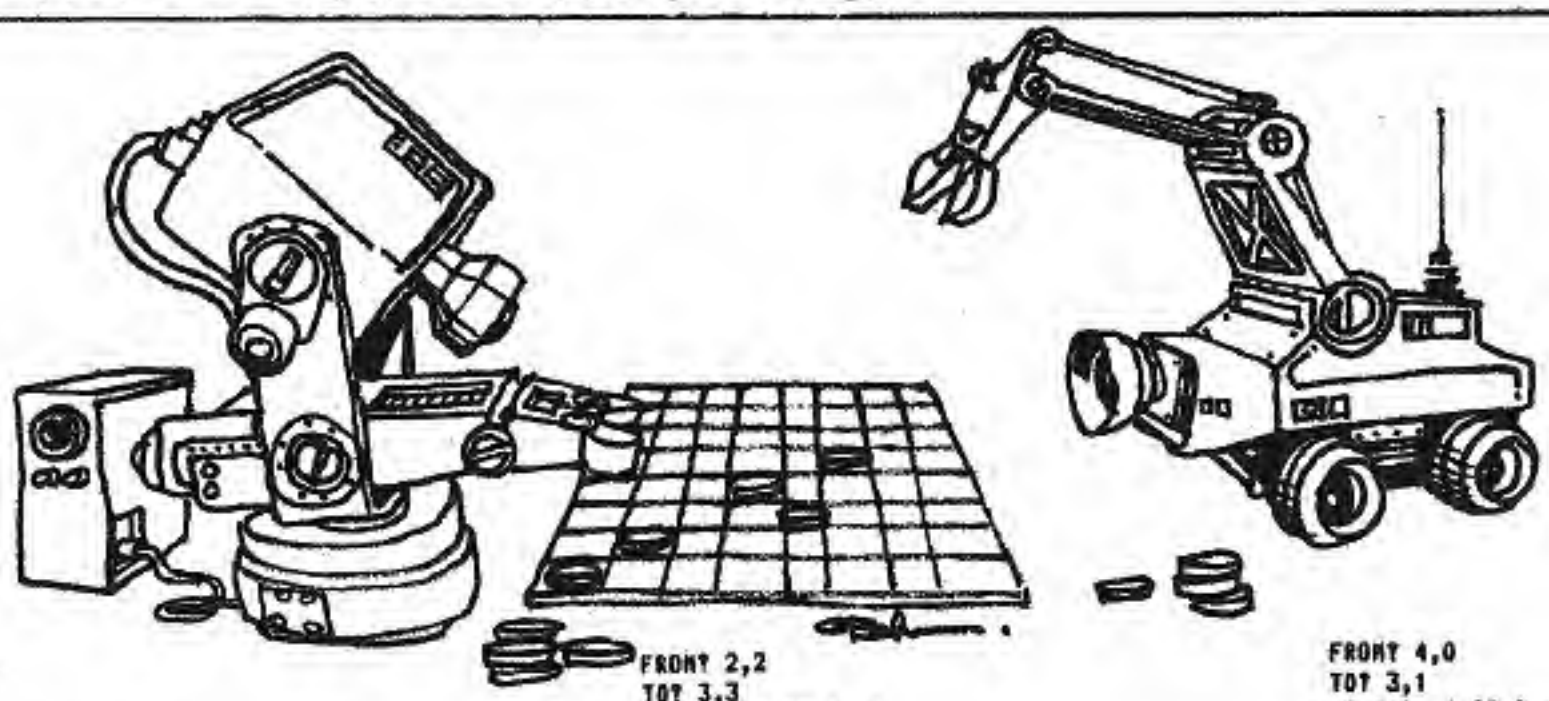
Checkers



This program plays checkers. The pieces played by the computer are marked with an "X", yours are marked "O". A move is made by specifying the coordinates of the piece to be moved (X, Y). Home (O,O) is in the bottom left and X specifies distance to the right of home (i.e., column) and Y specifies distance above home (i.e., row). You then specify where you wish to move to.

The original version of the program by Alan Segal was not able to recognize (or permit) a double or triple jump. If you tried one, it was likely that your piece would disappear altogether!

Steve North of Creative Computing rectified this problem and Lawrence Neal contributed modifications to allow the program to tell which player has won the game. The computer does not play a particularly good game but we leave it to *you* to improve that.

```
                CHECKERS
  CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS IS THE GAME OF CHECKERS.  THE COMPUTER IS X,
AND YOU ARE O.  THE COMPUTER WILL MOVE FIRST.
SQUARES ARE REFERRED TO BY A COORDINATE SYSTEM.
(0,0) IS THE LOWER LEFT CORNER
(0,7) IS THE UPPER LEFT CORNER
(7,0) IS THE LOWER RIGHT CORNER
(7,7) IS THE UPPER RIGHT CORNER
THE COMPUTER WILL TYPE '+TO' WHEN YOU HAVE ANOTHER
JUMP.  TYPE TWO NEGATIVE NUMBERS IF YOU CANNOT JUMP.

Chemist

The fictitious chemical, kryptocyanic acid, can only be diluted by the ratio of 7 parts water to 3 parts acid. Any other ratio causes an unstable compound which soon explodes. Given an amount of acid, you must determine how much water to add for dilution. If you're more than 5% off, you lose one of your nine lives. The program continues to play until you lose all nine lives or until it is interrupted.

It was originally written by Wayne Teeter of Ridgecrest, California.

```
                CHEMIST
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THE FICTITIOUS  CHEMICAL KRYPTOCYANIC ACID CAN ONLY BE
DILUTED BY THE RATIO OF 7 PARTS WATER TO 3 PARTS ACID.
IF ANY OTHER RATIO IS ATTEMPTED, THE ACID BECOMES UNSTABLE
AND SOON EXPLODES.  GIVEN THE AMOUNT OF ACID, YOU MUST
DECIDE HOW MUCH WATER TO ADD FOR DILUTION.  IF YOU MISS
YOU FACE THE CONSEQUENCES.
 32 LITERS OF KRYPTOCYANIC ACID.  HOW MUCH WATER? 77
GOOD JOB! YOU MAY BREATHE NOW, BUT DON'T INHALE THE FUMES!

 11 LITERS OF KRYPTOCYANIC ACID.  HOW MUCH WATER? 27
SIZZLE!  YOU HAVE JUST BEEN DESALINATED INTO A BLOB
OF QUIVERING PROTOPLASM!
HOWEVER, YOU MAY TRY AGAIN WITH ANOTHER LIFE.
 26 LITERS OF KRYPTOCYANIC ACID.  HOW MUCH WATER? 28
SIZZLE!  YOU HAVE JUST BEEN DESALINATED INTO A BLOB

Chief

In the words of the program author, John Graham, "CHIEF is designed to give people (mostly kids) practice in the four operations (addition, multiplication, subtraction, and division).

It does this while giving people some fun. And then, if the people are wrong, it shows them how they should have done it.

CHIEF was written by John Graham of Upper Brookville, New York.

```
                CHIEF
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

 I AM CHIEF NUMBERS FREEK, THE GREAT INDIAN MATH GOD.
ARE YOU READY TO TAKE THE TEST YOU CALLED ME OUT FOR? YES
 TAKE A NUMBER AND ADD 3. DIVIDE THIS NUMBER BY 5 AND
MULTIPLY BY 8. DIVIDE BY 5 AND ADD THE SAME. SUBTRACT 1.
  WHAT DO YOU HAVE? 12
I BET YOUR NUMBER WAS  22  WAS I RIGHT? NO
WHAT WAS YOUR ORIGINAL NUMBER? 32
SO YOU THINK YOU'RE SO SMART, EH?
NOW WATCH.
 32 PLUS 3 EQUALS 35 .  THIS DIVIDED BY 5 EQUALS 7 ;
THIS TIMES 8 EQUALS 56 .  IF WE DIVIDE BY 5 AND ADD 5,
WE GET 16.2 , WHICH, MINUS 1 EQUALS 15.2 .
NOW DO YOU BELIEVE ME? NO
YOU HAVE MADE ME MAD!!!
THERE MUST BE A GREAT LIGHTNING BOLT!

chomp

This program is an adaptation of a mathematical game originally described by Martin Gardner in the January 1973 issue of *Scientific American.* Up to a 9x9 grid is set up by you with the upper left square a poison square. This grid is the cookie. Players alternately chomp away at the cookie from the lower right. To take a chomp, input a row and column number of one of the squares remaining on the cookie. All of the squares below and to the right of that square, including that square, disappear.

Any number of people can play — the computer is only the moderator; it is not a player. Two-person strategies are interesting to work out but strategies when three or more people are playing are a real challenge.

The computer version of the game was written by Peter Sessions of People's Computer Company.

```
                 CHOMP
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS IS THE GAME OF CHOMP (SCIENTIFIC AMERICAN, JAN 1973)
WANT THE RULES (1=YES, 0=NO!)? 1
CHOMP IS FOR 1 OR MORE PLAYERS (HUMANS ONLY).

HERE'S HOW A BOARD LOOKS (THIS ONE IS 5 BY 7):

     1 2 3 4 5 6 7 8 9
 1   P * * * * * *
 2   * * * * * * *
 3   * * * * * * *
 4   * * * * * * *
 5   * * * * * * *

THE BOARD IS A BIG COOKIE - R ROWS HIGH AND C COLUMNS
WIDE. YOU INPUT R AND C AT THE START. IN THE UPPER LEFT
CORNER OF THE COOKIE IS A POISON SQUARE (P). THE ONE WHO
CHOMPS THE POISON SQUARE LOSES. TO TAKE A CHOMP, TYPE THE
ROW AND COLUMN OF ONE OF THE SQUARES ON THE COOKIE.
ALL OF THE SQUARES BELOW AND TO THE RIGHT OF THAT SQUARE
(INCLUDING THAT SQUARE, TOO) DISAPPEAR -- CHOMP!!
NO FAIR CHOMPING SQUARES THAT HAVE ALREADY BEEN CHOMPED,
OR THAT ARE OUTSIDE THE ORIGINAL DIMENSIONS OF THE COOKIE.

HERE WE GO...

HOW MANY PLAYERS? 2
HOW MANY ROWS? 8
HOW MANY COLUMNS? 7

     1 2 3 4 5 6 7 8 9
 1   P * * * * * *
 2   * * * * * * *
 3   * * * * * * *
 4   * * * * * * *
 5   * * * * * * *
 6   * * * * * * *
 7   * * * * * * *
 8   * * * * * * *

PLAYER  1
COORDINATES OF CHOMP (ROW,COLUMN)? 5,6

Civil War

This simulation is based on 14 battles in the Civil War. Facts and figures used are based on the actual occurrence. If you follow the same strategy used in the actual battle, the results will be the same. Generally, this is a good strategy since the generals in the Civil War were fairly good military strategists. However, you can frequently outperform the Civil War generals, particularly in cases where they did not have good enemy intelligence and consequently followed a poor course of action. Naturally, it helps to know your Civil War history, although the computer gives you the rudiments.

After each of the 14 battles, your casualties are compared to the actual casualties of the battle, and you are told whether you win or lose the battle.

You may play Civil War alone in which case the program simulates the Union general. Or two players may play in which case the computer becomes the moderator.

Civil War was written in 1968 by three Students at Lexington High School, Massachusetts: L. Cram, L. Goodie, and D. Hibbard. It was modified into a 2-player game by G. Paul and R. Hess of TIES, St. Paul, Minnesota.

```
          CIVIL WAR
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES

THIS IS A CIVIL WAR SIMULATION.
TO PLAY, TYPE A RESPONSE WHEN THE COMPUTER ASKS.
REMEMBER THAT ALL FACTORS ARE INTERRELATED AND THAT YOUR
RESPONSES COULD CHANGE HISTORY. FACTS AND FIGURES USED ARE
BASED ON THE ACTUAL OCCURRENCE. MOST BATTLES TEND TO RESULT
AS THEY DID IN THE CIVIL WAR, BUT IT ALL DEPENDS ON YOU!!

THE OBJECT OF THE GAME IS TO WIN AS MANY BATTLES AS POSSIBLE.

YOUR CHOICES FOR DEFENSIVE STRATEGY ARE:
        (1) ARTILLERY ATTACK
        (2) FORTIFICATION AGAINST FRONTAL ATTACK
        (3) FORTIFICATION AGAINST FLANKING MANEUVERS
        (4) FALLING BACK
 YOUR CHOICES FOR OFFENSIVE STRATEGY ARE:
        (1) ARTILLERY ATTACK
        (2) FRONTAL ATTACK
        (3) FLANKING MANEUVERS
        (4) ENCIRCLEMENT
YOU MAY SURRENDER BY TYPING A '5' FOR YOUR STRATEGY.
```

```
ARE THERE TWO GENERALS PRESENT (ANSWER YES OR NO)? YES
SELECT A BATTLE BY TYPING A NUMBER FROM 1 TO 14 ON
REQUEST.  TYPE ANY OTHER NUMBER TO END THE SIMULATION.
BUT '0' BRINGS BACK EXACT PREVIOUS BATTLE SITUATION
ALLOWING YOU TO REPLAY IT

NOTE: A NEGATIVE FOOD$ ENTRY CAUSES THE PROGRAM TO
USE THE ENTRIES FROM THE PREVIOUS BATTLE

AFTER REQUESTING A BATTLE, DO YOU WISH BATTLE DESCRIPTIONS
(ANSWER YES OR NO)? YES

WHICH BATTLE DO YOU WISH TO SIMULATE? 3

THIS IS THE BATTLE OF SEVEN DAYS
JUNE 25-JULY 1, 1862.  GENERAL LEE (CSA) UPHELD THE
OFFENSIVE THROUGHOUT THE BATTLE AND FORCED GEN. MCCLELLAN
AND THE UNION FORCES AWAY FROM RICHMOND.

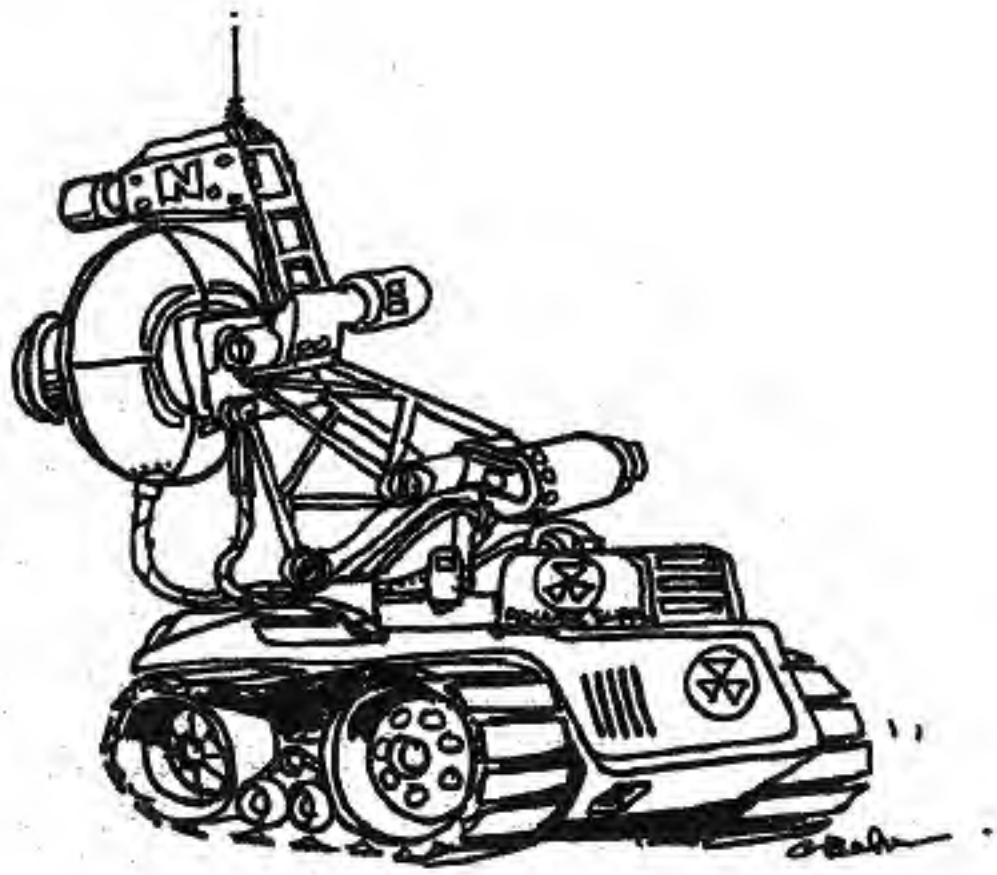
Combat



In this game, you are fighting a small-scale war with the computer. You have 72,000 troops which you first must distribute among your Army, Navy, and Air Force. You may distribute them in any way you choose as long as you don't use more than 72,000.

You then attack your opponent (the computer) and input which service and the number of men you wish to use. The computer then tells you the outcome of the battle, gives you the current statistics and allows you to determine your next move.

After the second battle, it is decided from the total statistics whether you win or lose or if a treaty is signed.

This program was created by Bob Dores of Milton, Massachusetts.

```
                COMBAT
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

I AM AT WAR WITH YOU.
WE HAVE 72000 SOLDIERS APIECE.
DISTRIBUTE YOUR FORCES.
             ME            YOU
ARMY          30000        ? 25000
NAVY          20000        ? 25000
A.F.          22000        ? 22000
YOU ATTACK FIRST. TYPE 1 FOR ARMY  2 FOR NAVY
AND 3 FOR AIR FORCE.
? 3
HOW MANY MEN
? 22000
YOU WIPED OUT ONE OF MY ARMY PATROLS, BUT I DESTROYED
2 NAVY BASES AND BOMBED 3 ARMY BASES.

             YOU           ME
ARMY          6250          20000
NAVY          8333          20000
A.F.          22000         22000
WHAT IS YOUR NEXT MOVE?
ARMY=1  NAVY=2  AIR FORCE=3
? 3
HOW MANY MEN
? 20000
MY NAVY AND AIR FORCE IN A COMBINED ATTACK LEFT
YOUR COUNTRY IN SHAMBLES.

FROM THE RESULTS OF BOTH OF YOUR ATTACKS,
YOU LOST-I CONQUERED YOUR COUNTRY.  IT SERVES YOU
RIGHT FOR PLAYING THIS STUPID GAME!!!
```

Craps

This game simulates the game of craps played according to standard Nevada craps table rules. That is:

1. A 7 or 11 on the first roll wins
2. A 2, 3, or 12 on the first roll loses
3. Any other number rolled becomes your "point." You continue to roll; if you get your point, you win. If you roll a 7, you lose and the dice change hands when this happens.

This version of craps was modified by Steve North of Creative Computing. It is based on an original which appeared one day on a computer at DEC.

```
                CRAPS
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

2,3,12 ARE LOSERS 4,5,6,8,9,10 POINTS

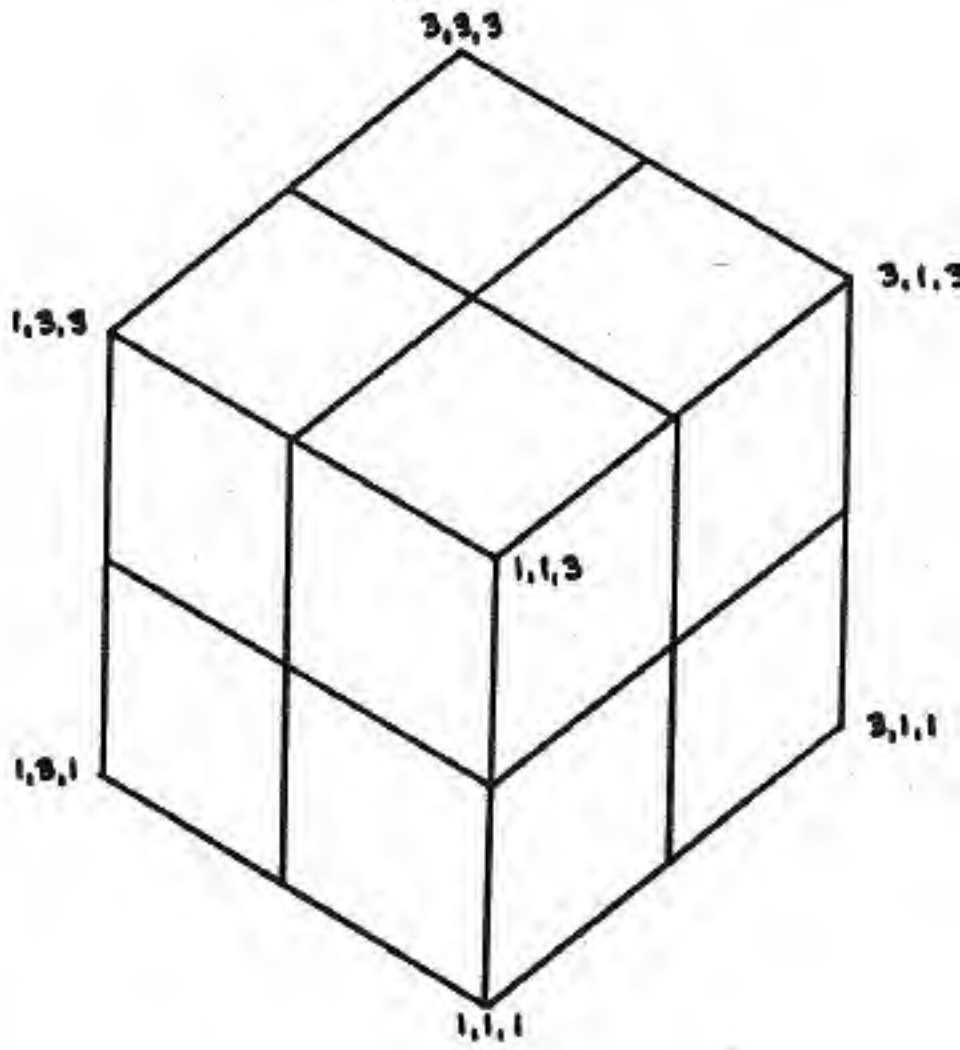
Cube

CUBE is a game played on the facing sides of a cube with a side dimension of 2. A location is designated by three numbers — e.g., 1, 2, 1. The object is to travel from 1, 1, 1 to 3, 3, 3 by moving one horizontal or vertical (not diagonal) square at a time without striking one of 5 randomly placed landmines. You are staked to $500; prior to each play of the game you may make a wager whether you will reach your destination. You lose if you hit a mine or try to make an illegal move — i.e., change more than one digit from your previous position.

Cube was created by Jerimac Ratliff of Fort Worth, Texas.



```
                CUBE
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT TO  SEE THE INSTRUCTIONS? (YES--1,NO--0)
? 1
THIS IS A GAME IN WHICH YOU WILL BE PLAYING AGAINST THE
RANDOM DECISION OF THE COMPUTER. THE FIELD OF PLAY IS A
CUBE OF SIDE 3. ANY OF THE 27 LOCATIONS CAN BE DESIGNATED
BY IMPUTING THREE NUMBERS SUCH AS 2,3,1.  AT THE START,
YOU ARE AUTOMATICALLY AT LOCATION 1,1,1.  THE OBJECT OF
THE GAME IS TO GET TO LOCATION 3,3,3.  ONE MINOR DETAIL,
THE COMPUTER WILL PICK, AT RANDOM, 5 LOCATIONS AT WHICH
IT WILL PLANT LAND MINES.  IF YOU HIT ONE OF  THESE LOCATIONS
YOU LOSE.  ONE OTHER DETAIL, YOU MAY MOVE ONLY ONE SPACE
IN ONE DIRECTION EACH MOVE.  FOR  EXAMPLE: FROM 1,1,2 YOU
MAY  MOVE TO 2,1,2 OR 1,1,3.  YOU MAY NOT CHANGE
TWO OF THE NUMBERS ON THE SAME MOVE.  IF YOU MAKE  AN ILLEGAL
MOVE, YOU LOSE AND THE COMPUTER TAKES THE MONEY YOU MAY
HAVE BET ON THAT ROUND.

ALL YES OR NO QUESTIONS WILL BE ANSWERED BY A 1 FOR YES
OR A 0 (ZERO) FOR NO.

WHEN STATING THE AMOUNT OF A WAGER, PRINT ONLY THE NUMBER
OF DOLLARS (EXAMPLE: 250)  YOU ARE AUTOMATICALLY STARTED WITH
500  DOLLAR ACCOUNT.

GOOD LUCK
WANT TO MAKE A WAGER?

Depth Charge

In this program you are captain of the destroyer USS Computer. An enemy submarine has been causing trouble and your mission is to destroy it. You may select the size of the "cube" of water you wish to search in. The computer then determines how many depth charges you get to destroy the submarine.

Each depth charge is exploded by you specifying a trio of numbers; the first two are the surface coordinates (X,Y), the third is the depth. After each depth charge, your sonar observer will tell you where the explosion was relative to the submarine.

Dana Noftle wrote this program while a student at Acton High School, Acton, Massachusetts.

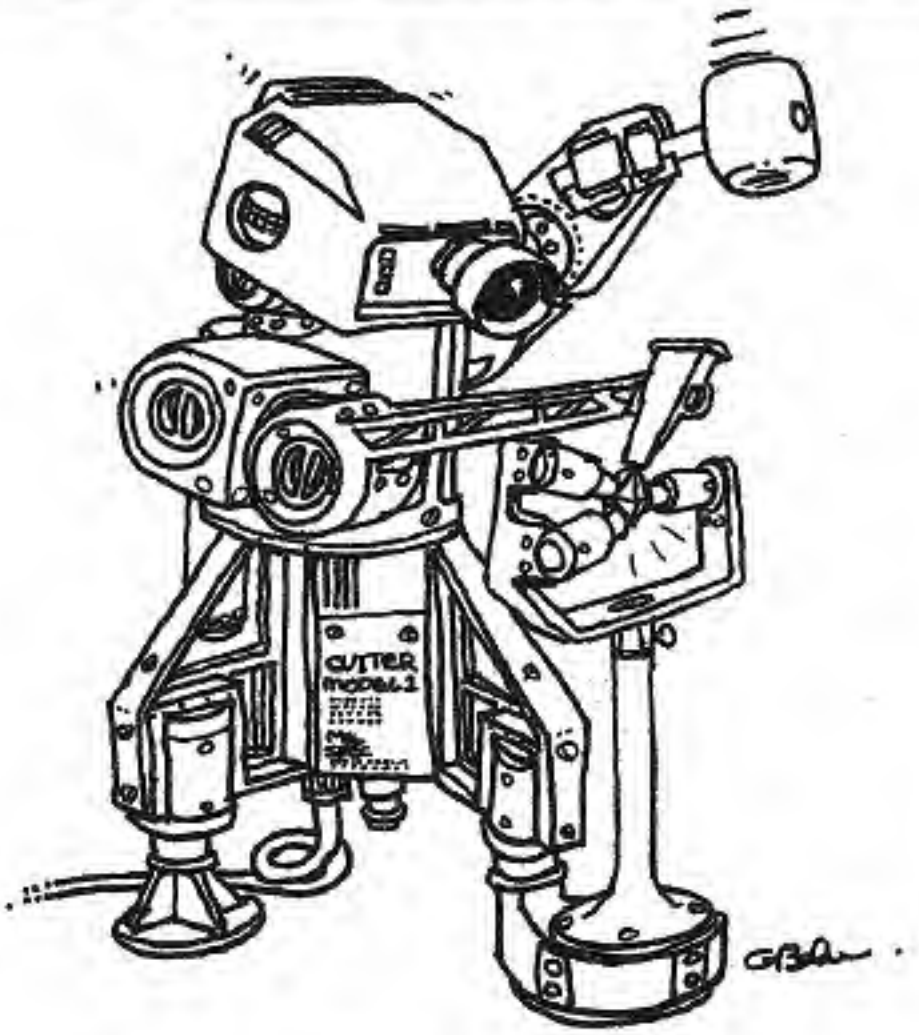
Diamond



This program fills an 8½x11 piece of paper with diamonds (plotted on a hard-copy terminal, of course). The program asks for an odd number to be input in the range 5 to 31. The diamonds printed will be this number of characters high and wide. The number of diamonds across the page will vary from 12 for 5-character wide diamonds to 1 for a diamond 31-characters wide. You can change the content of the pattern if you wish in Statement 6.

The program was written by David Ahl of Creative Computing.

```

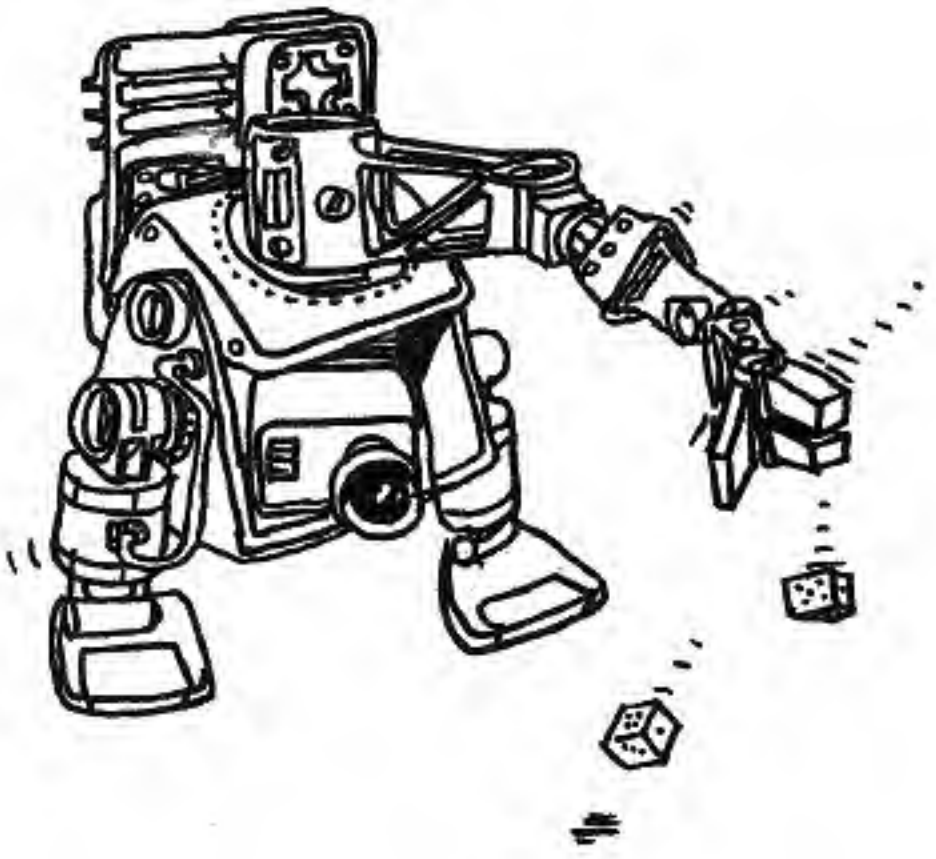
Dice

Not exactly a game, this program simulates rolling a pair of dice a large number of times and prints out the frequency distribution. You simply input the number of rolls. It is interesting to see how many rolls are necessary to approach the theoretical distribution:

2	1/36	2.7777 . . .%
3	2/36	5.5555 . . .%
4	3/36	8.3333 . . .%

etc.

Daniel Freidus wrote this program while in the seventh grade at Harrison Jr-Sr High School, Harrison, New York.



```

Digits

The player writes down a set of 30 numbers (0, 1, or 2) at random prior to playing the game. The computer program, using pattern recognition techniques, attempts to guess the next number in your list.

The computer asks for 10 numbers at a time. It always guesses first and then examines the next number to see if it guessed correctly. By pure luck (or chance or probability), the computer ought to be right 10 times. It is uncanny how much better it generally does than that!

This program originated at Dartmouth; original author unknown.

```
                DIGITS
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS IS A GAME OF GUESSING.
FOR INSTRUCTIONS, TYPE '1', ELSE TYPE '0'? 1

PLEASE TAKE A PIECE OF PAPER AND WRITE DOWN
THE DIGITS '0', '1', OR '2' THIRTY TIMES AT RANDOM.
ARRANGE THEM IN THREE LINES OF TEN DIGITS.
I WILL ASK FOR THEM 10 AT A TIME.
I WILL ALWAYS GUESS THEM FIRST, AND THEN LOOK AT YOUR
NEXT NUMBER TO SEE IF I WAS RIGHT.  BY PURE LUCK
I OUGHT TO BE RIGHT 10 TIMES.  BUT I HOPE TO DO BETTER
THAN THAT *****

TEN NUMBERS, PLEASE? 1,0,2,1,1,0,1,1,2,2

MY GUESS     YOUR NO.     RESULT       NO. RIGHT

 0            1           WRONG         0

Even Wins

This is a game between you and the computer. To play, an odd number of objects (marbles, chips, matches) are placed in a row. You take turns with the computer picking up between one and four objects each turn. The game ends when there are no objects left, and the winner is the one with an even number of objects picked up.

Two versions of this game are included. While to the player they appear similar, the programming approach is quite different. EVEN WINS, the first version, is deterministic — i.e., the computer plays by fixed, good rules and is impossible to beat if you don't know how to play the game. It always starts with 27 objects, although you may change this in Lines 250, and 1060.

The second version, GAME OF EVEN WINS, is much more interesting because the computer starts out only knowing the rules of the game. Using simple techniques of artificial intelligence (cybernetics), the computer gradually learns to play from its mistakes until it plays a very good game. After 20 games, the computer is a challenge to beat. Variation in the human's style of play seems to make the computer learn more quickly. If you plot the learning curve of this program, it closely resembles classical human learning curves from psychological experiments.

Eric Peters at DEC wrote the GAME OF EVEN WINS. The original author of EVEN WINS is unknown.

```
                EVEN WINS
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

    THIS IS A TWO PERSON GAME CALLED 'EVEN WINS.'
TO PLAY THE GAME, THE PLAYERS NEED 27 MARBLES OR
OTHER OBJECTS ON A TABLE.

    THE 2 PLAYERS ALTERNATE TURNS, WITH EACH PLAYER
REMOVING FROM 1 TO 4 MARBLES ON EACH MOVE.  THE GAME
ENDS WHEN THERE ARE NO MARBLES LEFT, AND THE WINNER
IS THE ONE WITH AN EVEN NUMBER OF MARBLES.

    THE ONLY RULES ARE THAT (1) YOU MUST ALTERNATE TURNS,
(2) YOU MUST TAKE BETWEEN 1 AND 4 MARBLES EACH TURN,
AND (3) YOU CANNOT SKIP A TURN.

    TYPE A 1 IF YOU WANT TO GO FIRST, AND TYPE
A 0 IF YOU WANT ME TO GO FIRST.
? 0
TOTAL= 27
I PICK UP 2 MARBLES.
TOTAL= 25

    AND WHAT IS YOUR NEXT MOVE, MY TOTAL IS 2
? 2

TOTAL= 23

    YOUR TOTAL IS 2
I PICK UP 4 MARBLES.
TOTAL= 19

    AND WHAT IS YOUR NEXT MOVE, MY TOTAL IS 6
? 4

TOTAL= 15

    YOUR TOTAL IS 6
I PICK UP 2 MARBLES.
TOTAL= 13

    AND WHAT IS YOUR NEXT MOVE, MY TOTAL IS 8
? 1

TOTAL= 12

    YOUR TOTAL IS 7
I PICK UP 1 MARBLES.
TOTAL= 11

    AND WHAT IS YOUR NEXT MOVE, MY TOTAL IS 9
? 3

TOTAL= 8

    YOUR TOTAL IS 10
I PICK UP 1 MARBLES.
TOTAL= 7

    AND WHAT IS YOUR NEXT MOVE, MY TOTAL IS 10
? 1

TOTAL= 6

    YOUR TOTAL IS 11
I PICK UP 1 MARBLES.
TOTAL= 5

    AND WHAT IS YOUR NEXT MOVE, MY TOTAL IS 11
? 1

TOTAL= 4

    YOUR TOTAL IS 12
I PICK UP 3 MARBLES.
TOTAL= 1

    AND WHAT IS YOUR NEXT MOVE, MY TOTAL IS 14
? 1

 THAT IS ALL OF THE MARBLES.

 MY TOTAL IS 14   YOUR TOTAL IS 13

    I WON.  DO YOU WANT TO PLAY
AGAINT  TYPE 1 FOR YES AND 0 FOR NO.

                GAME OF EVEN WINS
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS (YES OR NO)? YES

THE GAME IS PLAYED AS FOLLOWS:
AT THE BEGINNING OF THE GAME, A RANDOM NUMBER OF CHIPS ARE
PLACED ON THE BOARD.  THE NUMBER OF CHIPS ALWAYS STARTS
AS AN ODD NUMBER.  ON EACH TURN, A PLAYER MUST TAKE ONE,
TWO, THREE, OR FOUR CHIPS.  THE WINNER IS THE PLAYER WHO
FINISHES WITH A TOTAL NUMBER OF CHIPS THAT IS EVEN.
THE COMPUTER STARTS OUT KNOWING ONLY THE RULES OF THE
GAME.  IT GRADUALLY LEARNS TO PLAY WELL.  IT SHOULD BE
DIFFICULT TO BEAT THE COMPUTER AFTER TWENTY GAMES IN A ROW.
TRY IT!!!!

TO QUIT AT ANY TIME, TYPE A '0' AS YOUR MOVE.

THERE ARE 21 CHIPS ON THE BOARD.
COMPUTER TAKES 4 CHIPS LEAVING 17 ... YOUR MOVE? 4
THERE ARE 13 CHIPS ON THE BOARD.
COMPUTER TAKES 4 CHIPS LEAVING 9 ... YOUR MOVE? 2
THERE ARE 7 CHIPS ON THE BOARD.
COMPUTER TAKES 4 CHIPS LEAVING 3 ... YOUR MOVE? 1
THERE ARE 2 CHIPS ON THE BOARD.
COMPUTER TAKES 2 CHIPS.
GAME OVER ... I WIN!!!

THERE ARE 19 CHIPS ON THE BOARD.
COMPUTER TAKES 4 CHIPS LEAVING 15 ... YOUR MOVE? 4
THERE ARE 11 CHIPS ON THE BOARD.
COMPUTER TAKES 4 CHIPS LEAVING 7 ... YOUR MOVE? 2
THERE ARE 5 CHIPS ON THE BOARD.
COMPUTER TAKES 4 CHIPS LEAVING 1 ... YOUR MOVE? 1
GAME OVER ... I WIN!!!

THERE ARE 9 CHIPS ON THE BOARD.
COMPUTER TAKES 4 CHIPS LEAVING 5 ... YOUR MOVE? 2
THERE ARE 3 CHIPS ON THE BOARD.
COMPUTER TAKES 3 CHIPS.
GAME OVER ... YOU WIN!!!

THERE ARE 21 CHIPS ON THE BOARD.

Flip Flop

The object of this game is to change a row of ten X's

X X X X X X X X X X

to a row of ten 0's:

0 0 0 0 0 0 0 0 0 0

by typing in a number corresponding to the position of an "X" in the line. On some numbers one position will change while on other numbers, two will change. For example, inputting a 3 may reverse the X and 0 in position 3, but it might possibly reverse some other position too! You ought to be able to change all 10 in 12 or fewer moves. Can you figure out a good winning strategy?

To reset the line to all X's (same game), type 0 (zero). To start a new game at any point, type 11.

The original author of this game was Michael Kass of New Hyde Park, New York.

```
                FLIPFLOP
 CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THE OBJECT OF THIS PUZZLE IS TO CHANGE THIS:

X X X X X X X X X X

TO THIS:

0 0 0 0 0 0 0 0 0 0

BY TYPING THE NUMBER CORRESPONDING TO THE POSITION OF THE
LETTER ON SOME NUMBERS, ONE POSITION WILL CHANGE, ON
OTHERS, TWO WILL CHANGE.  TO RESET LINE TO ALL X'S, TYPE 0
(ZERO) AND TO START OVER IN THE MIDDLE OF A GAME, TYPE
11 (ELEVEN).

HERE IS THE STARTING LINE OF X'S.

1 2 3 4 5 6 7 8 9 10
X X X X X X X X X X

INPUT THE NUMBER? 2
1 2 3 4 5 6 7 8 9 10
X 0 X X X X X 0 X X
INPUT THE NUMBER? 3
1 2 3 4 5 6 7 8 9 10
X 0 0 X X X 0 0 X X
INPUT THE NUMBER? 4
1 2 3 4 5 6 7 8 9 10
X 0 0 0 X X 0 0 X X

Football

Football is probably the most popular simulated sports game. I have seen some people elect to play computerized football in preference to watching a bowl game on television.

Two versions of football are presented. The first is somewhat more "traditional" in that you, the player, are playing against the computer. You have a choice of seven offensive plays. On defense the computer seems to play a zone defense, but you have no choice of plays. The computer program presents the necessary rules as you play, and it is also the referee and determines penalties when an infraction is committed. FTBALL was written by John Kemeny at Dartmouth.

In the second version of football, the computer referees a game played between two human players. Each player gets a list of twenty plays with a code value for one. This list should be kept confidential from your opponent. The codes can be changed in data statements 1770 for Team 1 and 1780 for Team 2. All twenty plays are offensive; a defensive play is specified by defending against a type of offensive play. A defense is good for other similar types of plays, for example, a defense against a flare pass is very good against a screen pass but much less good against a half-back option.

This game was originally written by Raymond Miseyka of Butler, Pennsylvania.

                FOOTBALL
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

PRESENTING N.F.U. FOOTBALL (NO FORTRAN USED)

DO YOU WANT INSTRUCTIONS? YES
THIS IS A GAME FOR TWO TEAMS IN WHICH PLAYERS MUST
PREPARE A TAPE WITH A DATA STATEMENT (1770 FOR TEAM 1,
1780 FOR TEAM 2) IN WHICH EACH TEAM SCRAMBLES NOS. 1-20
THESE NUMBERS ARE THEN ASSIGNED TO 20 GIVEN PLAYS.
A LIST OF NOS. AND THEIR PLAYS ARE PROVIDED WITH
BOTH TEAMS HAVING THE SAME PLAYS.  THE MORE SIMILAR THE
PLAYS THE LESS YARDAGE GAINED.  SCORES ARE GIVEN
WHENEVER SCORES ARE MADE.  SCORES MAY ALSO BE OBTAINED
BY INPUTTING 99,99 FOR PLAY NOS.  TO PUNT OR ATTEMPT A
FIELDGOAL, INPUT 77,77 FOR PLAY NOS.  QUESTIONS WILL BE
ASKED THEN.  ON 4TH DOWN YOU WILL ALSO BE ASKED WHETHER
YOU WANT TO PUNT OR ATTEMPT A FIELD GOAL.  IF THE ANSWER TO
BOTH QUESTIONS IS NO IT WILL BE ASSUMED YOU WANT TO
TRY AND GAIN YARDAGE.  ANSWER ALL QUESTIONS YES OR NO.
THE GAME IS PLAYED UNTIL PLAYERS TERMINATE (CONTROL-C).
PLEASE PREPARE A TAPE AND RUN.

PLEASE INPUT SCORE LIMIT ON GAME? 28

Fur Trader

You are the leader of a French fur trading expedition in 1776 leaving the Ontario area to sell furs and get supplies for the next year. You have a choice of three forts at which you may trade. The cost of supplies and the amount you receive for your furs will depend upon the fort you choose. You also specify what types of furs that you have to trade.

The game goes on and on until you elect to trade no longer.

Author of the program is Dan Bachor, University of Calgary, Alberta, Canada.

```
                FUR TRADER
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

YOU ARE THE LEADER OF A FRENCH FUR TRADING EXPEDITION IN
1776 LEAVING THE LAKE ONTARIO AREA TO SELL FURS AND GET
SUPPLIES FOR THE NEXT YEAR.  YOU HAVE A CHOICE OF THREE
FORTS AT WHICH YOU MAY TRADE.  THE COST OF SUPPLIES
AND THE AMOUNT YOU RECEIVE FOR YOUR FURS WILL DEPEND
ON THE FORT THAT YOU CHOOSE.
DO YOU WISH TO TRADE FURS?
ANSWER YES OR NO           ? YES

YOU HAVE $ 600 SAVINGS.
AND 190 FURS TO BEGIN THE EXPEDITION.

YOUR 190 FURS ARE DISTRIBUTED AMONG THE FOLLOWING
KINDS OF PELTS: MINK, BEAVER, ERMINE AND FOX.

HOW MANY MINK PELTS DO YOU HAVE? 40

HOW MANY BEAVER PELTS DO YOU HAVE? 50

HOW MANY ERMINE PELTS DO YOU HAVE? 60

HOW MANY FOX PELTS DO YOU HAVE? 40
DO YOU WANT TO TRADE YOUR FURS AT FORT 1, FORT 2,
OR FORT 3?  FORT 1 IS FORT HOCHELAGA (MONTREAL)
AND IS UNDER THE PROTECTION OF THE FRENCH ARMY.
FORT 2 IS FORT STADACONA (QUEBEC) AND IS UNDER THE
PROTECTION OF THE FRENCH ARMY.  HOWEVER, YOU MUST
MAKE A PORTAGE AND CROSS THE LACHINE RAPIDS.
FORT 3 IS FORT NEW YORK AND IS UNDER DUTCH CONTROL.
YOU MUST CROSS THROUGH IROQUOIS LAND.
ANSWER 1, 2, OR 3.
? 3
YOU HAVE CHOSEN THE MOST DIFFICULT ROUTE.  AT
FORT NEW YORK YOU WILL RECEIVE THE HIGHEST VALUE
FOR YOUR FURS.  THE COST OF YOUR SUPPLIES
WILL BE LOWER THAN AT ALL THE OTHER FORTS.
DO YOU WANT TO TRADE AT ANOTHER FORT?
ANSWER YES OR NO           ? YES
ANSWER 1, 2, OR 3.
? 2
YOU HAVE CHOSEN A HARD ROUTE.  IT IS, IN COMPARSION,
HARDER THAN THE ROUTE TO HOCHELAGA BUT EASIER THAN
THE ROUTE TO NEW YORK.  YOU WILL RECEIVE AN AVERAGE VALUE
FOR YOUR FURS AND THE COST OF YOUR SUPPLIES WILL BE AVERAGE
DO YOU WANT TO TRADE AT ANOTHER FORT?
ANSWER YES OR NO           ? NO

YOUR CANOE UPSET IN THE LACHINE RAPIDS.  YOU
LOST ALL YOUR FURS
SUPPLIES AT FORT STADACONA COST $125.00
YOUR TRAVEL EXPENSES TO STADACONA WERE $15.00

YOU NOW HAVE $ 460  INCLUDING YOUR PREVIOUS SAVINGS

DO YOU WANT TO TRADE FURS NEXT YEAR?
ANSWER YES OR NO           ? YES

YOU HAVE $ 460 SAVINGS.
AND 190 FURS TO BEGIN THE EXPEDITION.

YOUR 190 FURS ARE DISTRIBUTED AMONG THE FOLLOWING
KINDS OF PELTS: MINK, BEAVER, ERMINE AND FOX.

HOW MANY MINK PELTS DO YOU HAVE? 50

HOW MANY BEAVER PELTS DO YOU HAVE? 100

HOW MANY ERMINE PELTS DO YOU HAVE? 20

HOW MANY FOX PELTS DO YOU HAVE? 20
DO YOU WANT TO TRADE YOUR FURS AT FORT 1, FORT 2,
OR FORT 3?  FORT 1 IS FORT HOCHELAGA (MONTREAL)
AND IS UNDER THE PROTECTION OF THE FRENCH ARMY.
FORT 2 IS FORT STADACONA (QUEBEC) AND IS UNDER THE
PROTECTION OF THE FRENCH ARMY.  HOWEVER, YOU MUST
MAKE A PORTAGE AND CROSS THE LACHINE RAPIDS.
FORT 3 IS FORT NEW YORK AND IS UNDER DUTCH CONTROL.
YOU MUST CROSS THROUGH IROQUOIS LAND.
ANSWER 1, 2, OR 3.
? 3
YOU HAVE CHOSEN THE MOST DIFFICULT ROUTE.  AT
FORT NEW YORK YOU WILL RECEIVE THE HIGHEST VALUE
FOR YOUR FURS.  THE COST OF YOUR SUPPLIES
WILL BE LOWER THAN AT ALL THE OTHER FORTS.
DO YOU WANT TO TRADE AT ANOTHER FORT?
ANSWER YES OR NO           ? NO

YOU NARROWLY ESCAPED AN IROQUOIS RAIDING PARTY.
HOWEVER, YOU HAD TO LEAVE ALL YOUR FURS BEHIND.
SUPPLIES AT NEW YORK COST $80.00
YOUR TRAVEL EXPENSES TO NEW YORK WERE $25.00

YOU NOW HAVE $ 355  INCLUDING YOUR PREVIOUS SAVINGS

DO YOU WANT TO TRADE FURS NEXT YEAR?
ANSWER YES OR NO           ? NO

Golf

This is a single player golf game. In other words it's you against the golf-course (the computer). The program asks for your handicap (maximum of 30) and your area of difficulty. You have a full bag of 29 clubs plus a putter. On the course you have to contend with rough, trees, on and off fairway, sand traps, and water hazards. In addition, you can hook, slice, go out of bounds, or hit too far. On putting, you determine the potency factor (or percent of swing). Until you get the swing of the game (no pun intended), you'll probably want to use a fairly high handicap.

Steve North of Creative Computing modified the original version of this game, the author of which is unknown.

```
                GOLF
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

WELCOME TO THE CREATIVE COMPUTING COUNTRY CLUB,
AN EIGHTEEN HOLE CHAMPIONSHIP LAYOUT, LOCATED A SHORT
DISTANCE FROM SCENIC DOWNTOWN MORRISTOWN.  THE
COMMENTATOR WILL EXPLAIN THE GAME AS YOU PLAY.
ENJOY YOUR GAME; SEE YOU AT THE 19TH HOLE...

WHAT IS YOUR HANDICAP? 10
DIFFICULTIES AT GOLF INCLUDE:
0=HOOK, 1=SLICE, 2=POOR DISTANCE, 4=TRAP SHOTS, 5=PUTTING
WHICH ONE (ONLY ONE) IS YOUR WORST? 1

YOU ARE AT TEE OFF HOLE 1 DISTANCE 361 YARDS, PAR 4
ON YOUR RIGHT IS ADJACENT FAIRWAY
ON YOUR LEFT IS ROUGH
SELECTION OF CLUBS
YARDAGE DESIRED                          SUGGESTED CLUBS
200 TO 280 YARDS                               1 TO 4

Gomoko

GOMOKO or GOMOKU is a traditional game of the Orient. It is played by two people on a board of intersecting lines (19 left-to-right lines, 19 top-to-bottom lines, 361 intersections in all). Players take turns. During his turn, a player may cover one intersection with a marker; (one player uses white markers; the other player uses black markers). The object of the game is to get five adjacent markers in a row, horizontally, vertically or along either diagonal.

Unfortunately, this program does not make the computer a very good player. It does not know when you are about to win or even who has won. But some of its moves may surprise you.

The original author of this program is Peter Sessions of People's Computer Company.

```
                GOMOKO
 CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

WELCOME TO THE ORIENTAL GAME OF GOMOKO.

THE GAME IS PLAYED ON AN N BY N GRID OF A SIZE
THAT YOU SPECIFY.  DURING YOUR PLAY, YOU MAY COVER ONE GRID
INTERSECTION WITH A MARKER. THE OBJECT OF THE GAME IS TO GET
5 ADJACENT MARKERS IN A ROW -- HORIZONTALLY, VERTICALLY, OR
DIAGONALLY.  ON THE BOARD DIAGRAM, YOUR MOVES ARE MARKED
WITH A '1' AND THE COMPUTER MOVES WITH A '2'.

THE COMPUTER DOES NOT KEEP TRACK OF WHO HAS WON.
TO END THE GAME, TYPE -1,-1 FOR YOUR MOVE.

WHAT IS YOUR BOARD SIZE (MIN 7/ MAX 19)? 10

WE ALTERNATE MOVES.  YOU GO FIRST...

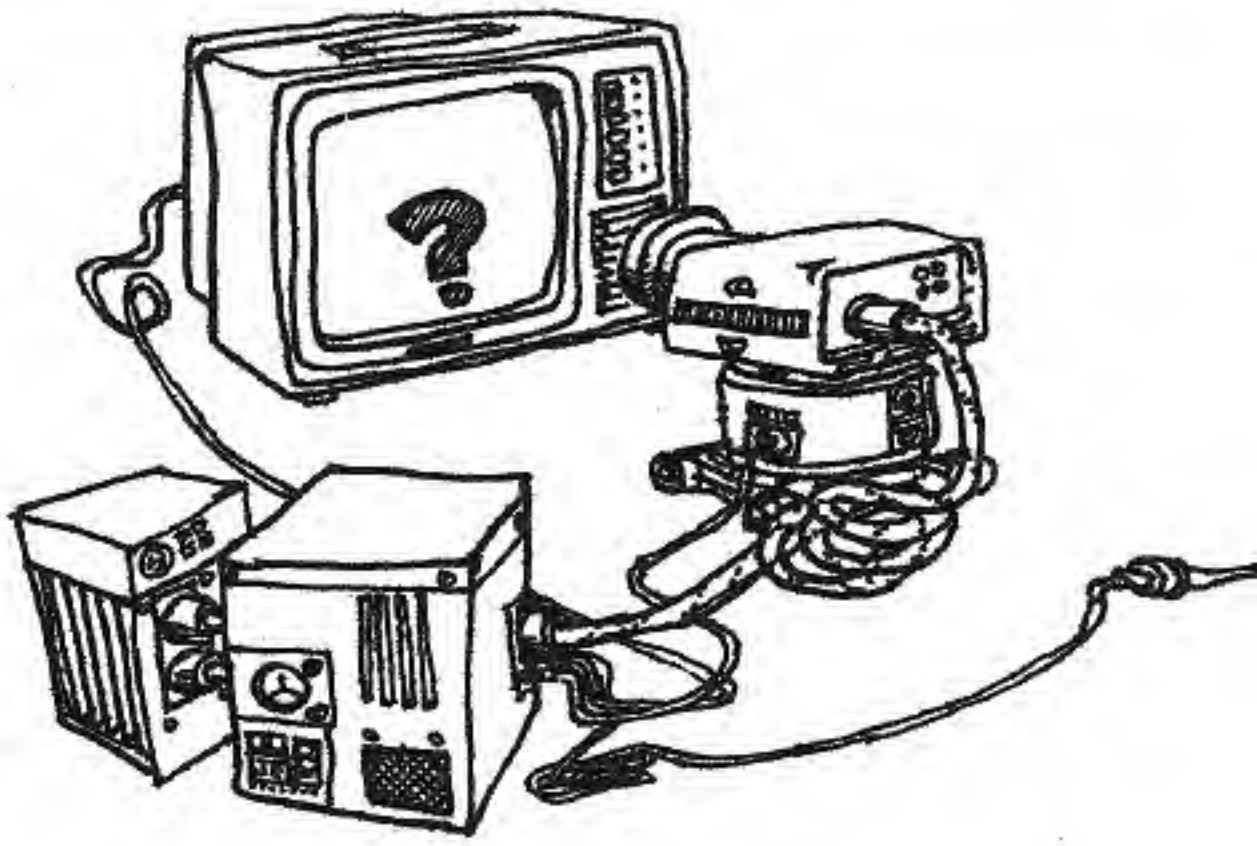
Guess



In Program GUESS, the computer chooses a random integer between 0 and any limit you set. You must then try to guess the number the computer has chosen using the clues provided by the computer.

You should be able to guess the number in one less than the number of digits needed to represent the number in binary notation — i.e., in base 2. This ought to give you a clue as to the optimum search technique.

GUESS converted from the original program in FOCAL which appeared in the book "Computers in the Classroom" by Walt Koetke of Lexington High School, Lexington, Massachusetts.

Gunner

GUNNER allows you to adjust the fire of a field artillery weapon to hit a stationary target. You specify the number of degrees of elevation of your weapon; 45 degrees provides maximum range with values under or over 45 degrees providing less range.

You get up to five shots to destroy the enemy before he destroys you. Gun range varies between 20,000 and 60,000 yards and burst radius is 100 yards. You must specify elevation within approximately 0.2 degrees to get a hit.

Tom Kloos of the Oregon Museum of Science and Industry in Portland, Oregon originally wrote GUNNER. Extensive modifications were added by David Ahl.

Hammurabi

In this game you direct the administrator of Sumeria, Hammurabi, how to manage the city. The city initially has 1,000 acres, 100 people and 3,000 bushels of grain in storage.

You may buy and sell land with your neighboring city-states for bushels of grain — the price will vary between 17 and 26 bushels per acre. You also must use grain to feed your people and as seed to plant the next year's crop.

You will quickly find that a certain number of people can only tend a certain amount of land and that people starve if they are not fed enough. You also have the unexpected to contend with such as a plague, rats destroying stored grain, and variable harvests.

You will also find that managing just the few resources in this game is not a trivial job over a period of say ten years. The crisis of population density rears its head very rapidly.

This program was originally written in Focal at DEC; author unknown. David Ahl converted it to BASIC and added the 10-year performance accessment. If you wish to change any of the factors, the extensive remarks in the program should make modification fairly straightforward.

Note for trivia buffs: somewhere along the line an m was dropped out of the spelling of Hammurabi in the Ahl version of the computer program. This error has spread far and wide until a generation of students who have used this program now think that Hammurabi is the incorrect spelling.

```
                HAMURABI
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

TRY YOUR HAND AT GOVERNING ANCIENT SUMERIA
FOR A TEN-YEAR TERM OF OFFICE.

HAMURABI:  I BEG TO REPORT TO YOU,
IN YEAR 1 , 0 PEOPLE STARVED, 5 CAME TO THE CITY,
POPULATION IS NOW 100
THE CITY NOW OWNS 1000 ACRES.
YOU HARVESTED 3 BUSHELS PER ACRE.
RATS ATE 200 BUSHELS.
YOU NOW HAVE 2800 BUSHELS IN STORE.

LAND IS TRADING AT 24 BUSHELS PER ACRE.
HOW MANY ACRES DO YOU WISH TO BUY? 10

HOW MANY BUSHELS DO YOU WISH TO FEED YOUR PEOPLE? 2000

HOW MANY ACRES DO YOU WISH TO PLANT WITH SEED? 990

HAMURABI:  I BEG TO REPORT TO YOU,
IN YEAR 2 , 0 PEOPLE STARVED, 5 CAME TO THE CITY,
POPULATION IS NOW 105
THE CITY NOW OWNS 1010 ACRES.
YOU HARVESTED 3 BUSHELS PER ACRE.
RATS ATE 16 BUSHELS.
YOU NOW HAVE 3019 BUSHELS IN STORE.

LAND IS TRADING AT 21 BUSHELS PER ACRE.
HOW MANY ACRES DO YOU WISH TO BUY? 25

HOW MANY BUSHELS DO YOU WISH TO FEED YOUR PEOPLE? 2000

HOW MANY ACRES DO YOU WISH TO PLANT WITH SEED? 1000
HAMURABI:  THINK AGAIN.  YOU HAVE ONLY
 494 BUSHELS OF GRAIN.  NOW THEN,
HOW MANY ACRES DO YOU WISH TO PLANT WITH SEED? 500

HAMURABI:  I BEG TO REPORT TO YOU,
IN YEAR 3 , 5 PEOPLE STARVED, 5 CAME TO THE CITY,
A HORRIBLE PLAGUE STRUCK!  HALF THE PEOPLE DIED.
POPULATION IS NOW 52
THE CITY NOW OWNS 1035 ACRES.
YOU HARVESTED 1 BUSHELS PER ACRE.
RATS ATE 0 BUSHELS.
YOU NOW HAVE 744 BUSHELS IN STORE.

LAND IS TRADING AT 17 BUSHELS PER ACRE.
HOW MANY ACRES DO YOU WISH TO BUY? 0
HOW MANY ACRES DO YOU WISH TO SELL? 25

HOW MANY BUSHELS DO YOU WISH TO FEED YOUR PEOPLE? 1000

HOW MANY ACRES DO YOU WISH TO PLANT WITH SEED? 500
HAMURABI:  THINK AGAIN.  YOU HAVE ONLY
 169 BUSHELS OF GRAIN.  NOW THEN,
HOW MANY ACRES DO YOU WISH TO PLANT WITH SEED? 300

HAMURABI:  I BEG TO REPORT TO YOU,
IN YEAR 4 , 2 PEOPLE STARVED, 12 CAME TO THE CITY,
POPULATION IS NOW 62
THE CITY NOW OWNS 1010 ACRES.
YOU HARVESTED 1 BUSHELS PER ACRE.
RATS ATE 0 BUSHELS.
YOU NOW HAVE 319 BUSHELS IN STORE.

LAND IS TRADING AT 23 BUSHELS PER ACRE.
HOW MANY ACRES DO YOU WISH TO BUY? 0
HOW MANY ACRES DO YOU WISH TO SELL? 500

HOW MANY BUSHELS DO YOU WISH TO FEED YOUR PEOPLE? 500

HOW MANY ACRES DO YOU WISH TO PLANT WITH SEED? 230

YOU STARVED 37 PEOPLE IN ONE YEAR!!!
DUE TO THIS EXTREME MISMANAGEMENT YOU HAVE NOT ONLY
BEEN IMPEACHED AND THROWN OUT OF OFFICE BUT YOU HAVE
ALSO BEEN DECLARED NATIONAL FINK!!!!

SO LONG FOR NOW.

Hangman

This is a simulation of the word guessing game, hangman. The computer picks a word, tells you how many letters in the word it has picked and then you guess a letter in the word. If you are right, the computer tells you where that letter belongs; if your letter is wrong, the computer starts to hang you. You get ten guesses before you are completely hanged:

Head
Body
Right and Left Arms
Right and Left Legs
Right and Left Hands
Right and Left Feet

You may add words in Data statements following Statement 508; however, if you do, you must also change the random word selector in Statement 40.

David Ahl modified this program into its current form from one created by Kenneth Aupperle of Melville, New York.

Hello

This is a sample of one of a great number of conversational programs. In a sense, it is like a CAI program except that its responses are just good fun. Whenever a computer is exhibited at a convention or conference with people that have not used a computer before, the conversational programs seem to get the first activity.

In this particular program, the computer dispenses advice on various problems such as sex, health, money, or job.

David Ahl is the author of HELLO.

```
                HELLO
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

HELLO.  MY NAME IS CREATIVE COMPUTER.

WHAT'S YOUR NAME? MEAN MR. MUSTARD

  HI THERE, MEAN MR. MUSTARD, ARE YOU ENJOYING YOURSELF HERE? NO

OH, I'M SORRY TO HEAR THAT, MEAN MR. MUSTARD, MAYBE WE CAN
BRIGHTEN UP YOUR VISIT A BIT.

SAY, MEAN MR. MUSTARD, I CAN SOLVE ALL KINDS OF PROBLEMS EXCEPT
THOSE DEALING WITH GREECE.  WHAT KIND OF PROBLEMS DO
YOU HAVE (ANSWER SEX, HEALTH, MONEY, OR JOB)? MONEY
SORRY, MEAN MR. MUSTARD, I'M BROKE TOO.  WHY DON'T YOU SELL
ENCYCLOPAEDIAS OR MARRY SOMEONE RICH OR STOP EATING
SO YOU WON'T NEED SO MUCH MONEY?

ANY MORE PROBLEMS YOU WANT SOLVED, MEAN MR. MUSTARD? YES

WHAT KIND (SEX, MONEY, HEALTH, JOB)? SEX
IS YOUR PROBLEM TOO MUCH OR TOO LITTLE? TOO MUCH

YOU CALL THAT A PROBLEM?!!  I SHOULD HAVE SUCH PROBLEMS!
IF IT BOTHERS YOU, MEAN MR. MUSTARD, TAKE A COLD SHOWER.

ANY MORE PROBLEMS YOU WANT SOLVED, MEAN MR. MUSTARD? YES

WHAT KIND (SEX, MONEY, HEALTH, JOB)? JOB
I CAN SYMPATHIZE WITH YOU MEAN MR. MUSTARD.  I HAVE TO WORK
VERY LONG HOURS FOR NO PAY -- AND SOME OF MY BOSSES
REALLY BEAT ON MY KEYBOARD.  MY ADVICE TO YOU, MEAN MR. MUSTARD,
IS TO OPEN A RETAIL COMPUTER STORE.  IT'S GREAT FUN.

ANY MORE PROBLEMS YOU WANT SOLVED, MEAN MR. MUSTARD? YES

WHAT KIND (SEX, MONEY, HEALTH, JOB)? HEALTH
MY ADVICE TO YOU MEAN MR. MUSTARD IS:
     1.  TAKE TWO ASPIRIN
     2.  DRINK PLENTY OF FLUIDS (ORANGE JUICE, NOT BEER!)
     3.  GO TO BED (ALONE)

ANY MORE PROBLEMS YOU WANT SOLVED, MEAN MR. MUSTARD? NOT REALLY

JUST A SIMPLE 'YES' OR 'NO' PLEASE, MEAN MR. MUSTARD.
ANY MORE PROBLEMS YOU WANT SOLVED, MEAN MR. MUSTARD? NO

THAT WILL BE $5.00 FOR THE ADVICE, MEAN MR. MUSTARD.
PLEASE LEAVE THE MONEY ON THE TERMINAL.

DID YOU LEAVE THE MONEY? NO

THAT'S HONEST, MEAN MR. MUSTARD, BUT HOW DO YOU EXPECT
ME TO GO ON WITH MY PSYCHOLOGY STUDIES IF MY PATIENTS
DON'T PAY THEIR BILLS?
```

Hexapawn

The game of Hexapawn and a method to learn a strategy for playing the game was described in Martin Gardner's "Mathematical Games" column in the March 1962 issue of *Scientific American.* The method described in the article was for a hypothetical learning machine composed of match boxes and colored beads. This has been generalized in the program HEX.

The program learns by elimination of bad moves. All positions encountered by the program and acceptable moves from them are stored in the array P$ (I). When the program encounters an unfamiliar position, the position and all legal moves from it are added to the list. If the program loses a game, it erases the move that led to defeat. If it hits a position from which all moves have been deleted (they all led to defeat), it erases the move that got it there and resigns. Eventually, the program learns to play extremely well and, indeed, is unbeatable. The learning strategy could be adopted to other simple games with a finite number of moves (tic-tac-toe, small board checkers, or other chess-based games).

The original version of this program was written by R.A. Kaapke. It was subsequently modified by Jeff Dalton and finally by Steve North of Creative Computing.

```
                HEXAPAWN
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

INSTRUCTIONS (Y-N)? YES

THIS PROGRAM PLAYS THE GAME OF HEXAPAWN.
HEXAPAWN IS PLAYED WITH CHESS PAWNS ON A 3 BY 3 BOARD.
THE PAWNS ARE MOVED AS IN CHESS - ONE SPACE FORWARD TO
AN EMPTY SPACE OR ONE SPACE FORWARD AND DIAGONALLY TO
CAPTURE AN OPPOSING MAN.  ON THE BOARD, YOUR PAWNS
ARE 'O', THE COMPUTER'S PAWNS ARE 'X', AND EMPTY
SQUARES ARE '.'.  TO ENTER A MOVE, TYPE THE NUMBER OF
THE SQUARE YOU ARE MOVING FROM, FOLLOWED BY THE NUMBER
OF THE SQUARE YOU WILL MOVE TO.  THE NUMBERS MUST BE
SEPARATED BY A COMMA.

THE COMPUTER STARTS A SERIES OF GAMES KNOWING ONLY WHEN
THE GAME IS WON (A DRAW IS IMPOSSIBLE) AND HOW TO MOVE.
IT HAS NO STRATEGY AT FIRST AND JUST MOVES RANDOMLY.
HOWEVER, IT LEARNS FROM EACH GAME.  THUS, WINNING BECOMES
MORE AND MORE DIFFICULT.  ALSO, TO HELP OFFSET YOUR
INITIAL ADVANTAGE, YOU WILL NOT BE TOLD HOW TO WIN THE
GAME BUT MUST LEARN THIS BY PLAYING.

THE NUMBERING OF THE BOARD IS AS FOLLOWS:
         123
         456
         789

FOR EXAMPLE, TO MOVE YOUR RIGHTMOST PAWN FORWARD,
YOU WOULD TYPE 9,6 IN RESPONSE TO THE QUESTION
'YOUR MOVE ?'.  SINCE I'M A GOOD SPORT, YOU'LL ALWAYS
GO FIRST.

         XXX

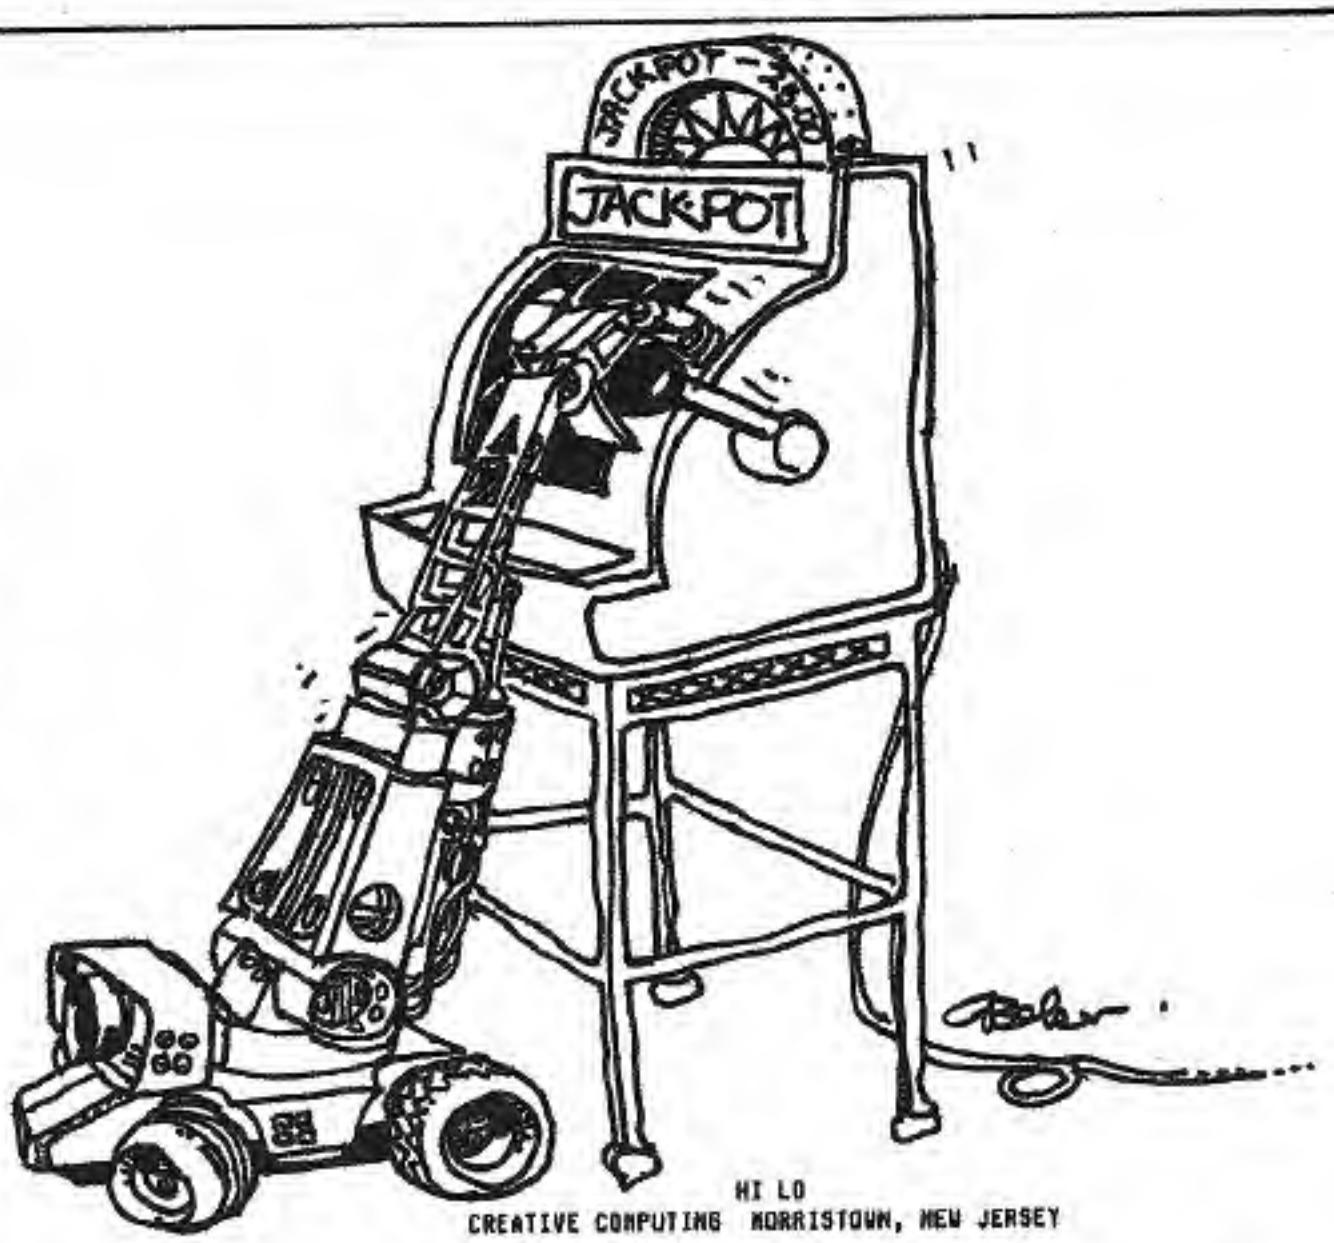
Hi-Lo



This game is an adaptation of the game GUESS; however, instead of just guessing a number between 1 and 100, in this game you win dollars when you guess the number. The directions, in the words of the author of the game, are as follows:

1. There is an amount of money, between one and one hundred dollars, in the "HI-LO" jackpot.
2. You will have six chances in which to guess the amount of money in the jackpot.
3. After each guess, the computer will tell whether the guess was too high or too low.
4. If the correct amount of money is not guessed after six chances, the computer will print the amount in the jackpot.
5. If the correct amount of money is guessed within the six chance limit, the computer will register this amount.
6. After each sequence of guesses, you have the choice of playing again or ending the program. If a new game is played, a new amount of money will constitute the jackpot.
7. If you win more than once, then your earnings are totalled.

The author is Dean Altman of Fort Worth, Texas.

YOUR TOTAL WINNINGS ARE NOW 61 DOLLARS.

PLAY AGAIN (YES OR NO)? NO

SO LONG.  HOPE YOU ENJOYED YOURSELF!!!
```

High I-Q

This is a computerized version of an old European solitaire game of logic. The game starts with a pegboard shaped like a cross having pegs in every hole but the center. The object is to remove all 32 pegs, or as many as possible, by jumping into an empty hole, then removing the jumped peg.

There are several different winning strategies for playing and, of course, each strategy can be played eight different ways on the board. Can you find a consistent winner?

Charles Lund wrote this game while at The American School in The Hague, Netherlands.

Hockey

This is a simulation of a ice hockey game. The computer, in this case, moderates and referees the play between two human opponents. Of course, one person could play both sides.

The program asks for team names, player names, and even the name of the referee. Four types of shot are permitted and a shot may be aimed at one of four areas. You are also asked about passing. The game is very comprehensive with lots of action, face offs, blocks, passes, 4 on 2 situations, and so on. Unfortunately there are no penalties.

The original author is Robert Puopolo; modifications by Steve North of Creative Computing.

```
                  HOCKEY
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

WOULD YOU LIKE THE INSTRUCTIONS? YES

THIS IS A SIMULATED HOCKEY GAME.
QUESTION      RESPONSE
PASS          TYPE IN THE NUMBER OF PASSES YOU WOULD
              LIKE TO MAKE, FROM 0 TO 3.
SHOT          TYPE THE NUMBER CORRESPONDING TO THE SHOT
              YOU WANT TO MAKE.  ENTER:
              1 FOR A SLAPSHOT
              2 FOR A WRISTSHOT
              3 FOR A BACKHAND
              4 FOR A SNAP SHOT
AREA          TYPE IN THE NUMBER CORRESPONDING TO
              THE AREA YOU ARE AIMING AT.  ENTER:
              1 FOR UPPER LEFT HAND CORNER
              2 FOR UPPER RIGHT HAND CORNER
              3 FOR LOWER LEFT HAND CORNER
              4 FOR LOWER RIGHT HAND CORNER

AT THE START OF THE GAME, YOU WILL BE ASKED FOR THE NAMES
OF YOUR PLAYERS.  THEY ARE ENTERED IN THE ORDER:
LEFT WING, CENTER, RIGHT WING, LEFT DEFENSE,
RIGHT DEFENSE, GOALKEEPER.  ANY OTHER INPUT REQUIRED WILL
HAVE EXPLANATORY INSTRUCTIONS.
ENTER THE TWO TEAMS? BIG GUYS, LITTLE GUYS

ENTER THE NUMBER OF MINUTES IN A GAME? 15

WOULD THE BIG GUYS COACH ENTER HIS TEAM

PLAYER 1 ? IBM
PLAYER 2 ? DEC
PLAYER 3 ? BURROUGHS
PLAYER 4 ? HONEYWELL
PLAYER 5 ? DATA GENERAL
PLAYER 6 ? AMDAHL

WOULD THE LITTLE GUYS COACH DO THE SAME

PLAYER 1 ? MITS
PLAYER 2 ? IMSAI
PLAYER 3 ? SWTPC
PLAYER 4 ? CROMEMCO
PLAYER 5 ? PTCO
PLAYER 6 ? TDL

INPUT THE REFEREE FOR THIS GAME? FEDERAL GVT

                BIG GUYS STARTING LINEUP
IBM
DEC
BURROUGHS
HONEYWELL
DATA GENERAL
AMDAHL

                LITTLE GUYS STARTING LINEUP
MITS
IMSAI
SWTPC
CROMEMCO
PTCO
TDL

WE'RE READY FOR TONIGHTS OPENING FACE-OFF
FEDERAL GVT WILL DROP THE PUCK BETWEEN DEC AND IMS
BIG GUYS HAS CONTROL OF THE PUCK
PASS? 2
BURROUGHS GIVES TO A STREAKING HONEYWELL
IBM COMES DOWN ON PTCO AND CROMEMCO
SHOT? 1
IBM LET'S A BIG SLAP SHOT GO!!
AREA? 4
WHAT A SPECTACULAR GLOVE SAVE BY TDL
AND TDL GOLFS IT INTO THE CROWD
AND WE'RE READY FOR THE FACE-OFF
LITTLE GUYS HAS CONTROL
PASS? 3
 A ' 3 ON 2 ' WITH A ' TRAILER '
MITS GIVES TO PTCO WHO SHUFFLES IT OFF TO
IMSAI WHO FIRES A WING TO WING PASS TO
SWTPC AS HE CUTS IN ALONE!!
SHOT? 2
SWTPC RIPS A WRIST SHOT OFF
AREA? 3
GLOVE SAVE AMDAHL AND HE HANGS ON
AND WE'RE READY FOR THE FACE-OFF
BIG GUYS HAS CONTROL OF THE PUCK
PASS? 1
HONEYWELL LEADS DATA GENERAL WITH A PERFECT PASS
DATA GENERAL CUTTING IN!!!
SHOT? 2
DATA GENERAL RIPS A WRIST SHOT OFF
AREA? 1
WHISTLES ONE OVER THE HEAD OF TDL
LITTLE GUYS HAS CONTROL
PASS? 2
IT'S A ' 3 ON 2 '
ONLY HONEYWELL AND DATA GENERAL ARE BACK
MITS GIVES OFF TO CROMEMCO
CROMEMCO DROPS TO PTCO
SHOT? 3
PTCO GETS A BACKHAND OFF
AREA? 1
SKATE SAVE BY AMDAHL
AMDAHL WHACKS THE LOOSE PUCK INTO THE STANDS
AND WE'RE READY FOR THE FACE-OFF
LITTLE GUYS HAS CONTROL
PASS? 2
IT'S A ' 3 ON 2 '
ONLY HONEYWELL AND DATA GENERAL ARE BACK
IMSAI GIVES OFF TO PTCO
PTCO DROPS TO MITS
SHOT? 4
MITS SNAPS OFF A SNAP SHOT
AREA? 1
SCORE LITTLE GUYS

SCORE: LITTLE GUYS: 1        BIG GUYS: 0
GOAL SCORED BY: MITS ASSISTED BY: PTCO AND IMSAI
AND WE'RE READY FOR THE FACE-OFF

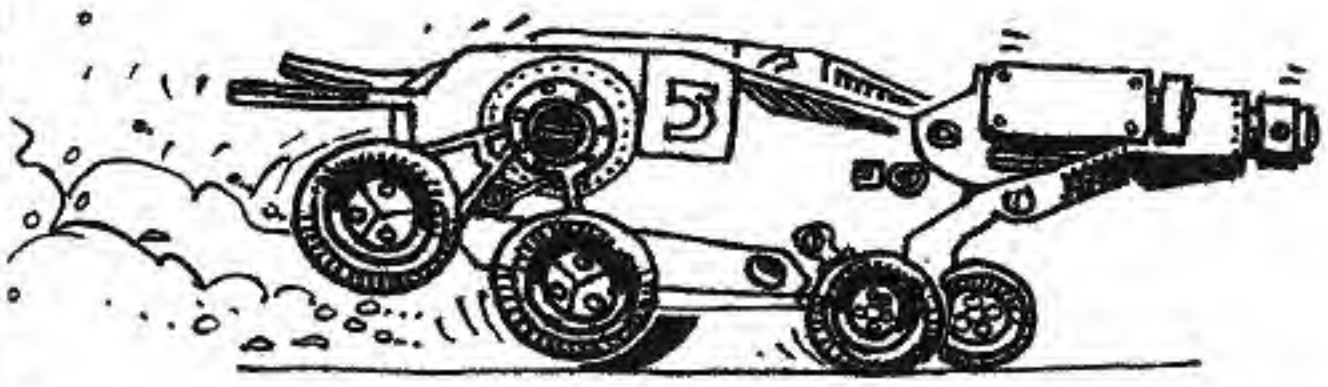
Horserace

This program simulates a one-mile horse race for three-year old thoroughbreds. Up to ten people may place bets on the race up to $10,000 each. However, you may only bet to win. You place your bet by inputting the number of the horse, a comma, and the amount of your bet. The computer then shows the position of the horses at seven points around the track and at the finish. Payoffs and winnings are shown at the end.

The program was written by Laurie Chevalier while a student at South Portland High School.



```
                HORSERACE
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

WELCOME TO SOUTH PORTLAND HIGH RACETRACK
                  ...OWNED BY LAURIE CHEVALIER
DO YOU WANT DIRECTIONS? YES
UP TO 10 MAY PLAY.  A TABLE OF ODDS WILL BE PRINTED.  YOU
MAY BET ANY + AMOUNT UNDER 100000 ON ONE HORSE.
DURING THE RACE, A HORSE WILL BE SHOWN BY ITS
NUMBER.  THE HORSES RACE DOWN THE PAPER!

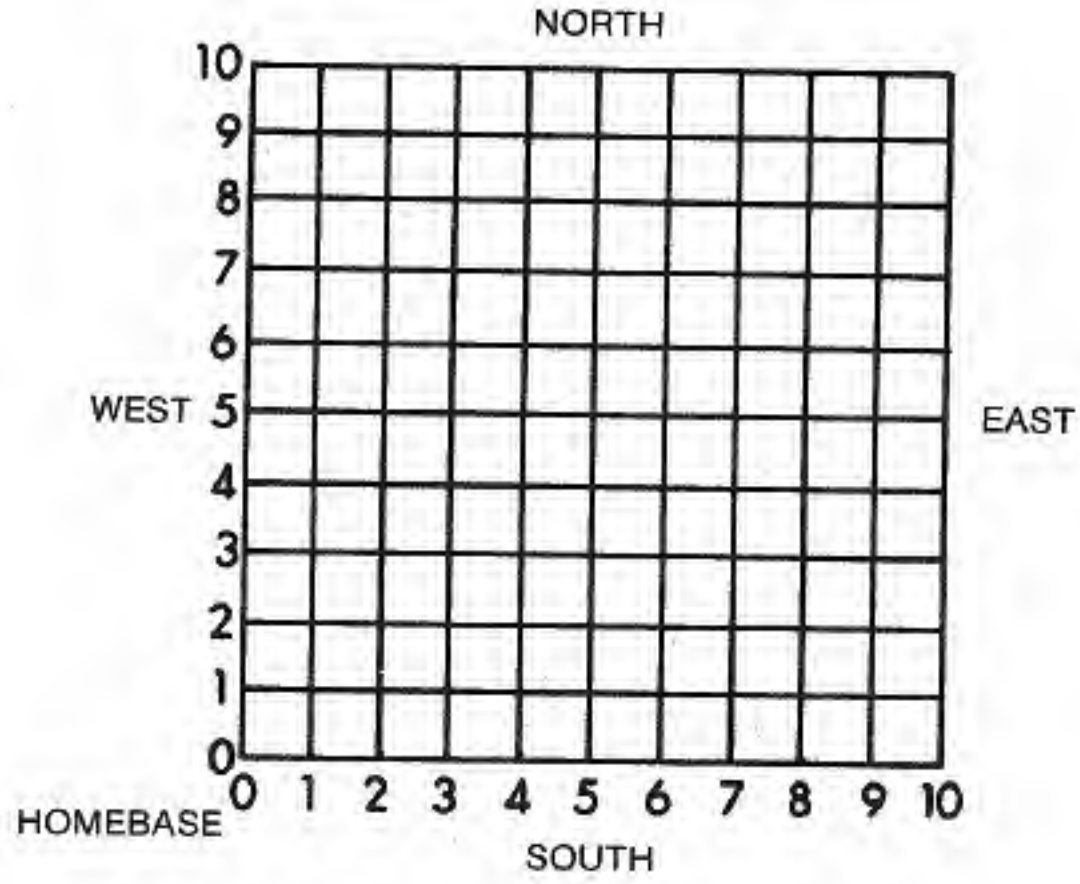
Hurkle

Hurkle? A Hurkle is a happy beast and lives in another galaxy on a planet named Lirht that has three moons. Hurkle are favorite pets of the Gwik, the dominant race of Lirht and . . . well, to find out more, read "The Hurkle is a Happy Beast," a story in the book *A Way Home* by Theodore Sturgeon.

In this program a shy hurkle is hiding on a 10 by 10 grid. Homebase is point 0,0 in the *Southwest* corner. Your guess as to the gridpoint where the hurkle is hiding should be a pair of whole numbers, separated by a comma. After each try, the computer will tell you the approximate direction to go look for the Hurkle. You get five guesses to find him; you may change this number in Line 110, although four guesses is actually enough.

This program was written by Bob Albrecht of People's Computer Company.



```
                  HURKLE
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

 A HURKLE IS HIDING ON A 10 BY 10 GRID. HOMEBASE
 ON THE GRID IS POINT  0,0  AND ANY GRIDPOINT IS A
 PAIR OF WHOLE NUMBERS SEPARATED BY A COMMA. TRY TO
 GUESS THE HURKLE'S GRIDPOINT. YOU GET 5 TRIES.
 AFTER EACH TRY, I WILL TELL YOU THE APPROXIMATE
 DIRECTION TO GO TO LOOK FOR THE HURKLE.

 GUESS # 1 ? 5,5
 GO SOUTHEAST

 GUESS # 2 ? 6,4
 GO SOUTH

 GUESS # 3 ? 6,3
 GO SOUTH

 GUESS # 4 ? 6,2

 YOU FOUND HIM IN 4 GUESSES!

 LET'S PLAY AGAIN. HURKLE IS HIDING.

 GUESS # 1 ? 5,5
 GO NORTHWEST

 GUESS # 2 ? 3,8
 GO NORTHWEST

 GUESS # 3 ? 2,9

 YOU FOUND HIM IN 3 GUESSES!
```

Kinema

This program tests your fundamental knowledge of kinematics. It presents a simple problem: a ball is thrown straight up in the air at some random velocity. You then must answer three questions about the flight of the ball:

1. How high will it go?
2. How long until it returns to earth?
3. What will be its velocity after a random number of seconds?

The computer evaluates your performance; within 15% of the correct answer is considered close enough. After each run, the computer gives you another problem until you interrupt it.

KINEMA was shortened from the original Huntington Computer Project Program, KINERV, by Richard Pav of Patchogue High School, Patchogue, New York.

```
                KINEMA
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

A BALL IS THROWN UPWARDS AT 35 METERS PER SECOND.

HOW HIGH WILL IT GO (IN METERS)? 10
NOT EVEN CLOSE....
CORRECT ANSWER IS  61.25

HOW LONG UNTIL IT RETURNS (IN SECONDS)? 7
CLOSE ENOUGH.
CORRECT ANSWER IS  7

WHAT WILL ITS VELOCITY BE AFTER 4.5 SECONDS? 20
NOT EVEN CLOSE....
CORRECT ANSWER IS -10

 1 RIGHT OUT OF 3.

A BALL IS THROWN UPWARDS AT 25 METERS PER SECOND.

HOW HIGH WILL IT GO (IN METERS)? 45
NOT EVEN CLOSE....
CORRECT ANSWER IS  31.25

HOW LONG UNTIL IT RETURNS (IN SECONDS)? 4
NOT EVEN CLOSE....
CORRECT ANSWER IS  5

WHAT WILL ITS VELOCITY BE AFTER 3.2 SECONDS? 12
NOT EVEN CLOSE....
CORRECT ANSWER IS -7

 0 RIGHT OUT OF 3.

King

This is one of the more comprehensive, difficult, and interesting land and resource management games. (If you've never played one of these games, start with HAMMURABI.)

In this game, you are Premier of Setats Detinu, a small communist island 30 by 70 miles long. Your job is to decide upon the budget of the country and distribute money to your countrymen from the communal treasury.

The money system is Rallods; each person needs 100 Rallods per year to survive. Your country's income comes from farm produce and tourists visiting your magnificent forests, hunting, fishing, etc. Part of your land is farm land but it also has an excellent mineral content and may be sold to foreign industry for strip mining. Industry import and support their own workers. Crops cost between 10 and 15 Rallods per square mile to plant, cultivate, and harvest. Your goal is to complete an eight-year term of office without major mishap. A word of warning: it isn't easy!

The author of this program is James A. Storer who wrote it while a student at Lexington High School.

```
                KING
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES

CONGRATULATIONS! YOU'VE JUST BEEN ELECTED PREMIER OF SETATS
DETINU, A SMALL COMMUNIST ISLAND 30 BY 70 MILES LONG.  YOUR
JOB IS TO DECIDE UPON THE COUNTRY'S BUDGET AND DISTRIBUTE
MONEY TO YOUR COUNTRYMEN FROM THE COMMUNAL TREASURY.
THE MONEY SYSTEM IS RALLODS, AND EACH PERSON NEEDS 100
RALLODS PER YEAR TO SURVIVE.  YOUR COUNTRY'S INCOME COMES
FROM FARM PRODUCE AND TOURISTS VISITING YOUR MAGNIFICENT
FORESTS, HUNTING, FISHING, ETC.  HALF YOUR LAND IS FARM LAND
WHICH ALSO HAS AN EXCELLENT MINERAL CONTENT AND MAY BE SOLD
TO FOREIGN INDUSTRY (STRIP MINING) WHO IMPORT AND SUPPORT
THEIR OWN WORKERS.  CROPS COST BETWEEN 10 AND 15 RALLODS PER
SQ. MILE TO PLANT.
YOUR GOAL IS TO COMPLETE YOUR 8 YEAR TERM OF OFFICE.
GOOD LUCK.

YOU NOW HAVE 59907 RALLODS IN THE TREASURY.
 502 COUNTRYMEN, AND 2000 SQ. MILES OF LAND.
THIS YEAR INDUSTRY WILL BUY LAND FOR 103 RALLODS PER SQ. MILE.
LAND CURRENTLY COSTS 10 RALLODS PER SQ. MILE TO PLANT.

HOW MANY SQ. MILES DO YOU WISH TO SELL TO INDUSTRY? 200
HOW MANY RALLODS WILL YOU DISTRIBUTE TO YOUR COUNTRYMEN? 50200
HOW MANY SQ. MILES DO YOU WISH TO PLANT? 500
HOW MANY RALLODS DO YOU WISH TO SPEND ON POLLUTION CONTROL? 10000

 212 WORKERS CAME TO THE COUNTRY AND 396 COUNTRYMEN CAME TO THE ISLAN
 OF 500 SQ. MILES PLANTED, YOU HARVESTED 340 SQ. MILES OF CROPS.
   (DUE TO AIR AND WATER POLLUTION FROM FOREIGN INDUSTRY.)
 MAKING 17510 RALLODS.
 YOU MADE 8179 RALLODS FROM TOURIST TRADE.

YOU NOW HAVE 65634 RALLODS IN THE TREASURY.
 898 COUNTRYMEN,  212 FOREIGN WORKERS, AND 1800 SQ. MILES OF LAND.
THIS YEAR INDUSTRY WILL BUY LAND FOR 98 RALLODS PER SQ. MILE.
LAND CURRENTLY COSTS 13 RALLODS PER SQ. MILE TO PLANT.

HOW MANY SQ. MILES DO YOU WISH TO SELL TO INDUSTRY? 0
HOW MANY RALLODS WILL YOU DISTRIBUTE TO YOUR COUNTRYMEN? 89800
   THINK AGAIN, YOU'VE ONLY 65634 RALLODS IN THE TREASURY
HOW MANY RALLODS WILL YOU DISTRIBUTE TO YOUR COUNTRYMEN? 40000
HOW MANY SQ. MILES DO YOU WISH TO PLANT? 600
HOW MANY RALLODS DO YOU WISH TO SPEND ON POLLUTION CONTROL? 6000

 498 COUNTRYMEN DIED OF STARVATION
   YOU WERE FORCED TO SPEND 4482 RALLODS ON FUNERAL EXPENSES
 236 COUNTRYMEN CAME TO THE ISLAND.
 OF 600 SQ. MILES PLANTED, YOU HARVESTED 448 SQ. MILES OF CROPS.
   (DUE TO AIR AND WATER POLLUTION FROM FOREIGN INDUSTRY.)
 MAKING 21952 RALLODS.
 YOU MADE 6068 RALLODS FROM TOURIST TRADE.
   DECREASE BECAUSE AIR POLLUTION IS KILLING GAME BIRD POPULATION.

 498 COUNTRYMEN DIED IN ONE YEAR!!!!!
DUE TO THIS EXTREME MISMANAGEMENT YOU HAVE NOT ONLY
BEEN IMPEACHED AND THROWN OUT OF OFFICE BUT YOU
HAVE ALSO GAINED A VERY BAD REPUTATION.

Letter

LETTER is similar to the game GUESS in which you guess a number chosen by the computer; in this program, the computer picks a random letter of the alphabet and you must guess which one it is using the clues provided as you go along. It should not take you more than five guesses to get the mystery letter.

The program which appears here is loosely based on the original written by Bob Albrecht of People's Computer Company.

Life

The Game of Life was originally described in *Scientific American*, October 1970, in an article by Martin Gardner. The game itself was originated by John Conway of Gonville and Caius College, University of Cambridge, England.

In the "manual" game, organisms exist in the form of counters (chips or checkers) on a large checkerboard and die or reproduce according to some simple genetic rules. Conway's criteria for choosing his genetic laws were carefully delineated as follows:

1. There should be no initial pattern for which there is a simple proof that the population can grow without limit.
2. There should be initial patterns that apparently do grow without limit.
3. There should be simple initial patterns that grow and change for a considerable period of time before coming to an end in three possible ways: fading away completely (from overcrowding or from becoming too sparse), settling into a stable configuration that remains unchanged thereafter, or entering an oscillating phase in which they repeat an endless cycle of two or more periods.

In brief, the rules should be such as to make the behavior of the population relatively unpredictable. Conway's genetic laws are delightfully simple. First note that each cell of the checkerboard (assumed to be an infinite plane) has eight neighboring cells, four adjacent orthogonally, four adjacent diagonally. The rules are:

1. Survivals. Every counter with two or three neighboring counters survives for the next generation.
2. Deaths. Each counter with four or more neighbors dies (is removed) from overpopulation. Every counter with one neighbor or none dies from isolation.
3. Births. Each empty cell adjacent to exactly three neighbors — no more, no fewer — is a birth cell. A counter is placed on it at the next move.

It is important to understand that all births and deaths occur simultaneously. Together they constitute a single generation or, as we shall call it, a "move" in the complete "life history" of the initial configuration.

You will find the population constantly undergoing unusual, sometimes beautiful and always unexpected change. In a few cases the society eventually dies out (all counters vanishing), although this may not happen until after a great many generations. Most starting patterns either reach stable figures — Conway calls them "still lifes" — that cannot change or patterns that oscillate forever. Patterns with no initial symmetry tend to become symmetrical. Once this happens the symmetry cannot be lost, although it may increase in richness.

Conway used a DEC PDP-7 with a graphic display to observe long-lived populations. You'll probably find this more enjoyable to watch on a CRT than a hard-copy terminal.

Since MITS 8K BASIC does not have LINE INPUT, to enter leading blanks in the pattern, type a "." at the start of the line. This will be converted to a space by BASIC, but it permits you to type leading spaces. Typing DONE indicates that you are finished entering the pattern. See sample run.

Clark Baker of Project DELTA originally wrote this version of LIFE which was further modified by Steve North of Creative Computing.

Life for Two

LIFE-2 is based on Conway's game of Life. You must be familiar with the rules of LIFE before attempting to play LIFE-2.

There are two players; the game is played on a 5x5 board and each player has a symbol to represent his own pieces of 'life.' Live cells belonging to player 1 are represented by '*' and live cells belonging to player 2 are represented by the symbol '#'.

The # and * are regarded as the same except when deciding whether to generate a live cell. An empty cell having two '#' and one '*' for neighbors will generate a '#', i.e. the live cell generated belongs to the player who has the majority of the 3 live cells surrounding the empty cell where life is to be generated, for example:

	1	2	3	4	5
1					
2			*		
3				#	
4			#		
5					

A new cell will be generated at (3,3) which will be a '#' since there are two '#' and one '*' surrounding. The board will then become:

	1	2	3	4	5
1					
2					
3			#	#	
4					
5					

On the first move each player positions 3 pieces of life on the board by typing in the co-ordinates of the pieces. (In the event of the same cell being chosen by both players that cell is left empty.)

The board is then adjusted to the next generation and printed out.

On each subsequent turn each player places one piece on the board, the object being to annihilate his opponent's pieces. The board is adjusted for the next generation and printed out after both players have entered their new piece.

The game continues until one player has no more live pieces. The computer will then print out the board and declare the winner.

The idea for this game, the game itself, and the above write-up were written by Brian Wyvill of Bradford University in Yorkshire, England.

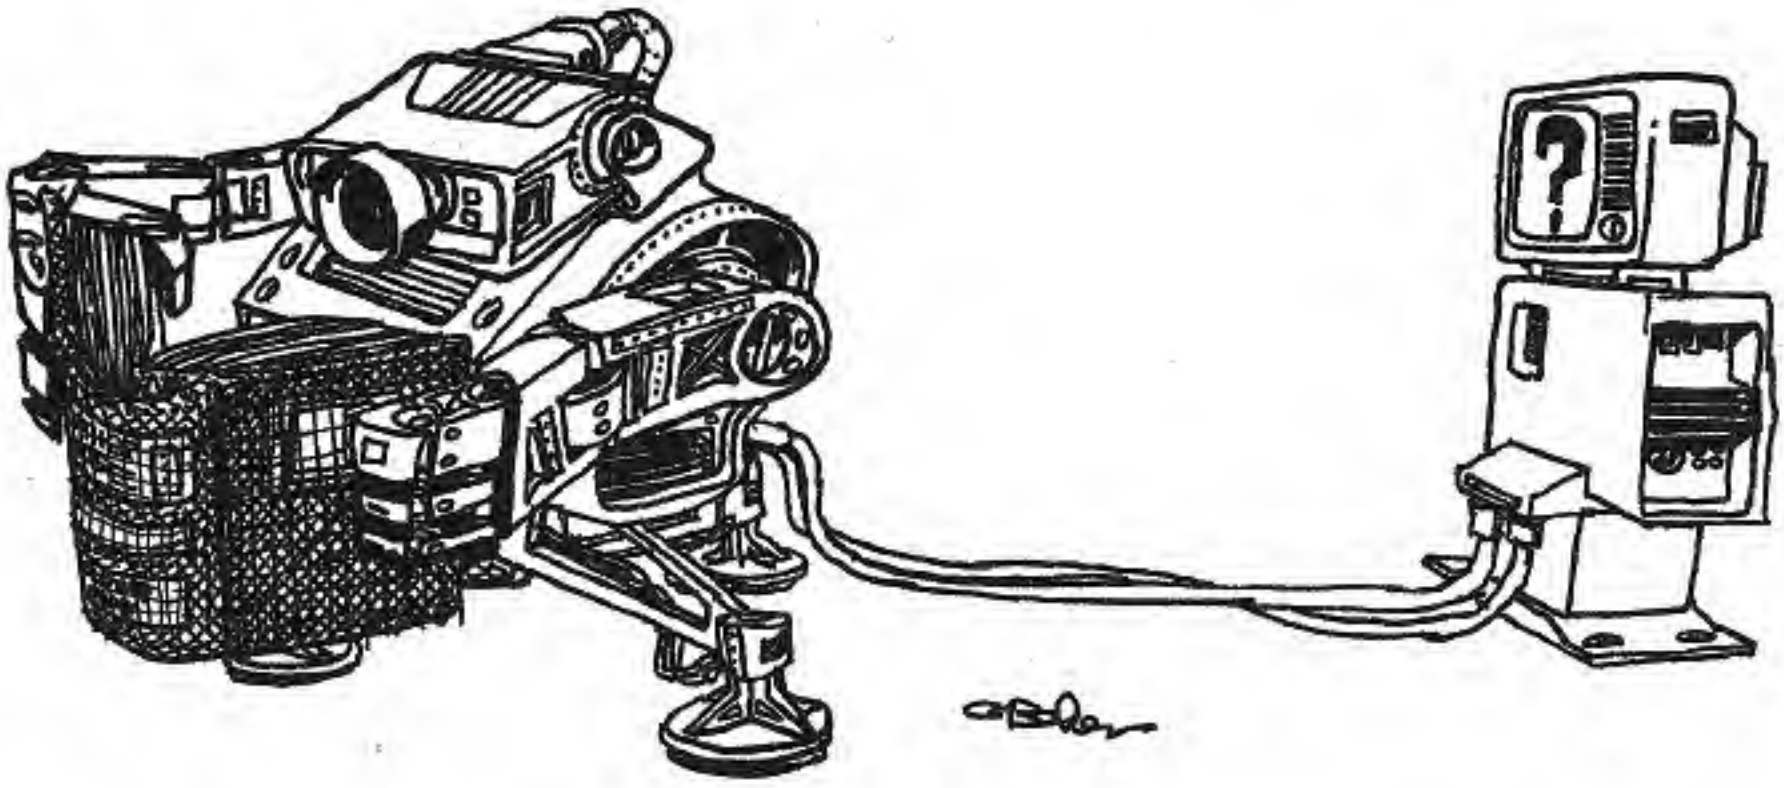
Literature Quiz



This is a simple CAI-type program which presents four multiple-choice questions from children's literature. Running the program is self-explanatory.

The program was written by Pamela McGinley while at DEC.

```
          LITERATURE QUIZ
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

TEST YOUR KNOWLEDGE OF CHILDREN'S LITERATURE.

THIS IS A MULTIPLE-CHOICE QUIZ.
TYPE A 1, 2, 3, OR 4 AFTER THE QUESTION MARK.

GOOD LUCK!

IN PINOCCHIO, WHAT WAS THE NAME OF THE CAT
1)TIGGER, 2)CICERO, 3)FIGARO, 4)GUIPETTO? 2
SORRY...FIGARO WAS HIS NAME.

FROM WHOSE GARDEN DID BUGS BUNNY STEAL THE CARROTS?
1)MR. NIXON'S, 2)ELMER FUDD'S, 3)CLEM JUDD'S, 4)STROMBOLI'S? 2
PRETTY GOOD!

IN THE WIZARD OF OZ, DOROTHY'S DOG WAS NAMED
1) CICERO, 2) TRIXIE, 3) KING, 4) TOTO ? 4
YEA!  YOU'RE A REAL LITERATURE GIANT.

WHO WAS THE FAIR MAIDEN WHO ATE THE POISON APPLE
1)SLEEPING BEAUTY, 2)CINDERELLA, 3)SNOW WHITE, 4)WENDY? 1
OH, COME ON NOW...IT WAS SNOW WHITE.

NOT BAD, BUT YOU MIGHT SPEND A LITTLE MORE TIME
READING THE NURSERY GREATS.

BREAK IN 96

Love

This program is designed to reproduce Robert Indiana's great art work "Love" with a message of your choice up to 60 characters long.

Your message is input as A$ in Statement 60. Statements 100-130 repeat the message A$ if it is less than 60 characters long and insert it into T$. Statements 210-400 actually print the design. The data statements are an alternating count of the number of characters and blanks which form the design. These data give the correct proportions for a standard 10 character per inch Teletype or line printer. The 13.2 characters per inch of the Teletype Model 43 on which this was printed cause some distortion.

The love program was created by David Ahl.

```
                    LOVE
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

A TRIBUTE TO THE GREAT AMERICAN ARTIST, ROBERT INDIANA.
HIS GREAT WORK WILL BE REPRODUCED WITH A MESSAGE OF
YOUR CHOICE UP TO 60 CHARACTERS.  IF YOU CAN'T THINK OF
A MESSAGE, SIMPLE TYPE THE WORD 'LOVE'

Lunar LEM Rocket

This game in its many different versions and names (ROCKET, LUNAR, LEM, and APOLLO) is by far and away the single most popular computer game. It exists in versions that start you anywhere from 500 feet to 200 miles above the moon, or other planets, too. Some allow the control of directional stabilization rockets and/or the retro rocket. The three versions presented here represent the most popular of the many variations.

In most versions of this game, the temptation is to slow up too soon and then have no fuel left for the lower part of the journey. This, of course, is disasterous (as you will find out when you land your own capsule)!

LUNAR was originally in FOCAL by Jim Storer while a student at Lexington High School and subsequently converted to BASIC by David Ahl. ROCKET was written by Eric Peters at DEC and LEM by William Labaree II of Alexandria, Virginia.

In this program, you set the burn rate of the retro rockets (pounds of fuel per second) every 10 seconds and attempt to achieve a soft landing on the moon. 200 lbs/sec really puts the brakes on, and 0 lbs/sec is free fall. Ignition occurs at 8 lbs/sec, so *do not* use burn rates between 1 and 7 lbs/sec. To make the landing more of a challenge, but more closely approximate the real Apollo LEM capsule, you should make the available fuel at the start (N) equal to 16,000 lbs, and the weight of the capsule (M) equal to 32,500 lbs in Statement 15.

Some versions of BASIC object to the series expansion calculations in Statements 420 and 430 (as you near the lunar surface, these numbers get very small). If your does, substitute the following expanded form for the expansion in Statement 420:

-Q*(1+Q*(1/2+Q*(1/3+Q*(1/4+Q/5))))

You should be able to figure the other one out yourself.

```
                  LUNAR
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS IS A COMPUTER SIMULATION OF AN APOLLO LUNAR
LANDING CAPSULE.

THE ON-BOARD COMPUTER HAS FAILED
SO YOU HAVE TO LAND THE CAPSULE MANUALLY.

SET BURN RATE OF RETRO ROCKETS TO ANY VALUE BETWEEN
0 (FREE FALL) AND 200 (MAXIMUM BURN) POUNDS PER SECOND.
SET NEW BURN RATE EVERY 10 SECONDS.

CAPSULE WEIGHT 32,500 LBS; FUEL WEIGHT 16,500 LBS.

GOOD LUCK

```

This is the most comprehensive of the three versions and permits you to control the time interval of firing, the thrust, and the attitude angle. It also allows you to work in the metric or English system of measurement. The instructions in the program dialog are very complete, so you shouldn't have any trouble.

```
LEM CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY
LUNAR LANDING SIMULATION
HAVE YOU FLOWN AN APOLLO/LEM MISSION BEFORE (YES OR NO)? NO
WHICH SYSTEM OF MEASUREMENT DO YOU PREFER?
 1=METRIC     0=ENGLISH
ENTER THE APPROPRIATE NUMBER? 1

  YOU ARE ON A LUNAR LANDING MISSION.  AS THE PILOT OF
THE LUNAR EXCURSION MODULE, YOU WILL BE EXPECTED TO
GIVE CERTAIN COMMANDS TO THE MODULE NAVIGATION SYSTEM.
THE ON-BOARD COMPUTER WILL GIVE A RUNNING ACCOUNT
OF INFORMATION NEEDED TO NAVIGATE THE SHIP.

THE ATTITUDE ANGLE CALLED FOR IS DESCRIBED AS FOLLOWS.
+ OR -180 DEGREES IS DIRECTLY AWAY FROM THE MOON
-90 DEGREES IS ON A TANGENT IN THE DIRECTION OF ORBIT
+90 DEGREES IS ON A TANGENT FROM THE DIRECTION OF ORBIT
0 (ZERO) DEGREES IS DIRECTLY TOWARD THE MOON

       -180,180
          ^
    -90 < -+- > 90
           !
           0
<< DIRECTION OF ORBIT <<

    SURFACE OF MOON

ALL ANGLES BETWEEN -180 AND 180 DEGREES ARE ACCEPTED.

1 FUEL UNIT = 1 SEC. AT MAX THRUST
ANY DISCREPANCIES ARE ACCOUNTED FOR IN THE USE OF FUEL
FOR AN ATTITUDE CHANGE.
AVAILABLE ENGINE POWER: 0 (ZERO) AND ANY VALUE BETWEEN
10 AND 100 PERCENT.

NEGATIVE THRUST OR TIME IS PROHIBITED.

INPUT: TIME INTERVAL IN SECONDS ------ (T)
       PERCENTAGE OF THRUST ---------- (P)
       ATTITUDE ANGLE IN DEGREES ----- (A)

FOR EXAMPLE:
T,P,A? 10,65,-60
TO ABORT THE MISSION AT ANY TIME, ENTER 0,0,0

OUTPUT: TOTAL TIME IN ELAPSED SECONDS
        HEIGHT IN FEET

LUNAR LANDING SIMULATION
----- ------- ----------

DO YOU WANT INSTRUCTIONS (YES OR NO)? YES

YOU ARE LANDING ON THE MOON AND HAVE TAKEN OVER MANUAL
CONTROL 500 FEET ABOVE A GOOD LANDING SPOT.  YOU HAVE A
DOWNWARD VELOCITY OF 50 FT/SEC.  120 UNITS OF FUEL REMAIN.

HERE ARE THE RULES THAT GOVERN YOUR SPACE VEHICLE:
(1) AFTER EACH SECOND, THE HEIGHT, VELOCITY, AND REMAINING
    FUEL WILL BE REPORTED.
(2) AFTER THE REPORT, A '?' WILL BE TYPED.  ENTER THE
    NUMBER OF UNITS OF FUEL YOU WISH TO BURN DURING THE
    NEXT SECOND.  EACH UNIT OF FUEL WILL SLOW YOUR DESCENT
    BY 1 FT/SEC.
(3) THE MAXIMUM THRUST OF YOUR ENGINE IS 30 FT/SEC/SEC OR
    30 UNITS OF FUEL PER SECOND.
(4) WHEN YOU CONTACT THE LUNAR SURFACE, YOUR DESCENT ENGINE
    WILL AUTOMATICALLY CUT OFF AND YOU WILL BE GIVEN A
    REPORT OF YOUR LANDING SPEED AND REMAINING FUEL.
(5) IF YOU RUN OUT OF FUEL, THE '?' WILL NO LONGER APPEAR,
    BUT YOUR SECOND-BY-SECOND REPORT WILL CONTINUE UNTIL
    YOU CONTACT THE LUNAR SURFACE.

Master Mind®

In the March-April 1976 issue of *Creative* we published a computerized version of Master Mind, a logic game. Master Mind is played by two people—one is called the code-maker; the other, the code-breaker. At the beginning of the game the code-maker forms a code, or combination of colored pegs. He hides these from the code-breaker. The code-breaker then attempts to deduce the code, by placing his own guesses, one at a time, on the board. After he makes a guess (by placing a combination of colored pegs on the board) the code-maker then gives the code-breaker clues to indicate how close the guess was to the code. For every peg in the guess that's the right color and in the right position, the code-breaker gets a black peg. For every peg in the guess that's the right color but not in the right position, the code-breaker gets a white peg. Note that these black and white pegs do not indicate *which* pegs in the guess are correct, but merely that they exist. For example, if the code was:

Yellow Red Red Green

and my guess was

Red Red Yellow Black

I would receive two white pegs and one black peg for the guess. I wouldn't know (except by comparing previous guesses) which one of the pegs in my guess was the right color in the right position.

Many people have written computer programs to play Master Mind in the passive role, i.e., the computer is the code-maker and the human is the code-breaker. This is relatively trivial; the challenge is writing a program that can also play actively as a code-breaker.

Actually, the task of getting the computer to deduce the correct combination is not at all difficult. Imagine, for instance, that you made a list of all the possible codes. To begin, you select a guess from your list at random. Then, as you receive clues, you cross off from the list those combinations which you know are impossible. For example if your guess is Red Red Green Green and you receive no pegs, then you know that any combination containing either a red or a green peg is impossible and may be crossed off the list. The process is continued until the correct solution is reached or there are no more combinations left on the list (in which case you know that the code-maker made a mistake in giving you the clues somewhere).

Note that in this particular implementation, we never actually create a list of the combinations, but merely keep track of which ones (in sequential order) may be correct. Using this system, we can easily say that the 523rd combination may be correct, but to actually produce the 523rd combination we have to count all the way from the first combination (or the previous one, if it was lower than 523). Actually, this problem could be simplified to a conversion from base 10 to base (number-of-colors) and then adjusting the values used in the MID$ function so as not to take a zeroth character from a string if you want to experiment. We did try a version that kept an actual list of all possible combinations (as a string array), which was significantly faster than this version, but which ate tremendous amounts of memory.

At the beginning of this game, you input the number of colors and number of positions you wish to use (which will directly affect the number of combinations) and the number of rounds you wish to play. While you are playing as the code-breaker, you may type in BOARD at any time to get a list of your previous guesses and clues, and QUIT to end the game. Note that this version uses string arrays, but this is merely for convenience and can easily be converted for a BASIC that has no string arrays as long as it has a MID$ function. This is because the string arrays are one-dimensional, never exceed a length greater than the number of positions and the elements never contain more than one character.

Math Dice

The program presents pictorial drill on addition facts using printed dice with no reading involved. It is good for beginning addition, since the answer can be derived from counting spots on the dice as well as by memorizing math facts or awareness of number concepts. It is especially effective run on a CRT terminal.

It was originally written by Jim Gerrish, a teacher at the Bernice A. Ray School in Hanover, New Hampshire.

```
                MATH DICE
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS PROGRAM GENERATES SUCCESSIVE PICTURES OF TWO DICE.
WHEN TWO DICE AND AN EQUAL SIGN FOLLOWED BY A QUESTION
MARK HAVE BEEN PRINTED, TYPE YOUR ANSWER AND THE RETURN KEY.
TO CONCLUDE THE LESSON, TYPE CONTROL-C AS YOUR ANSWER.

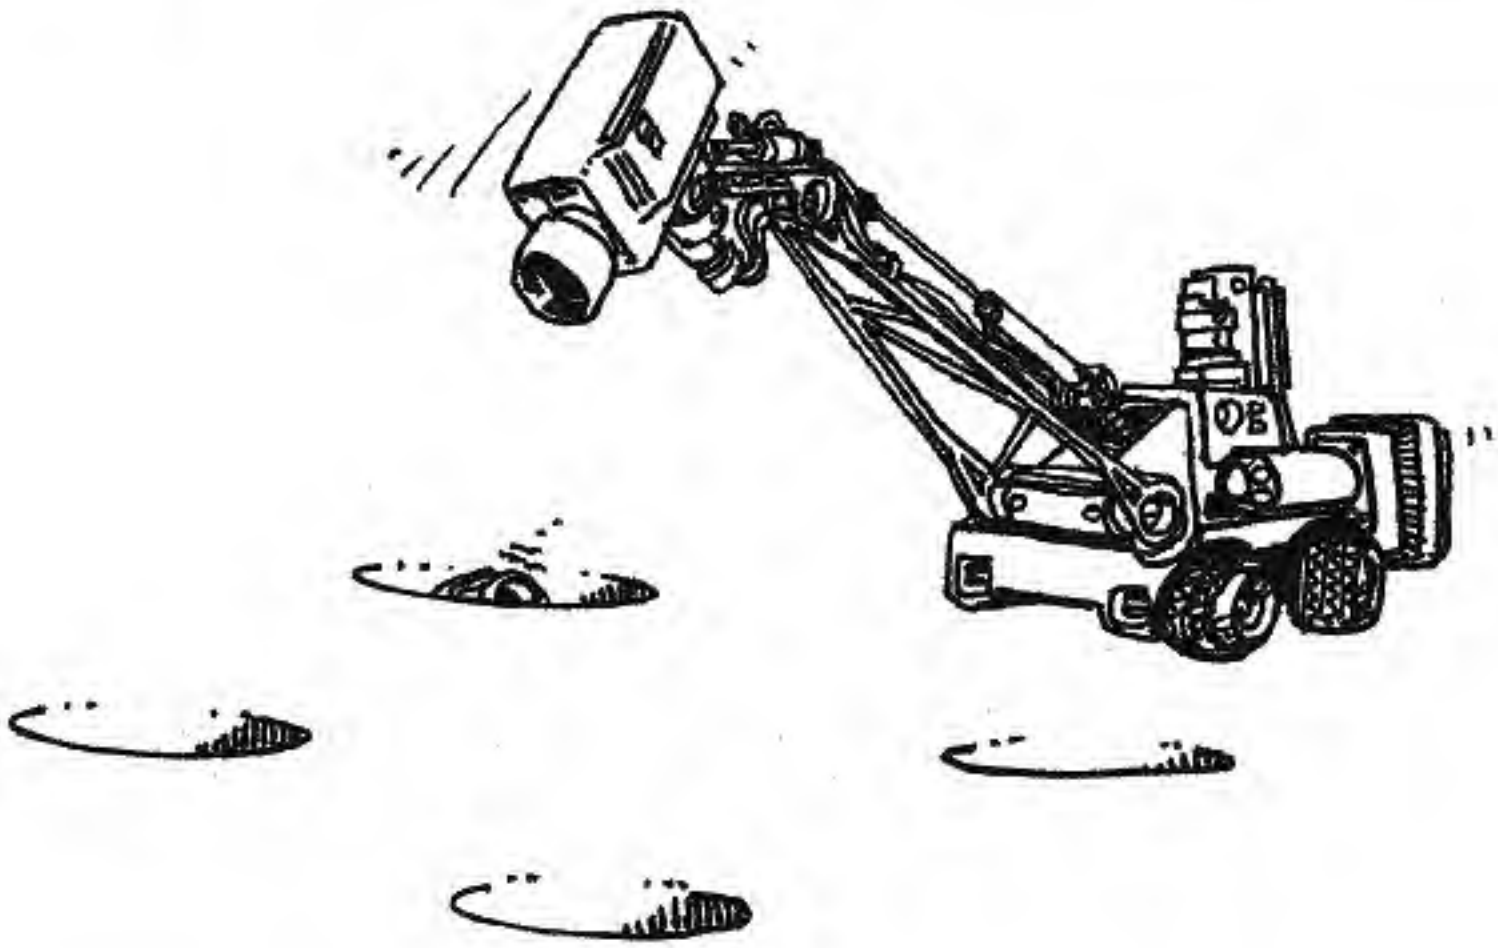
Mugwump

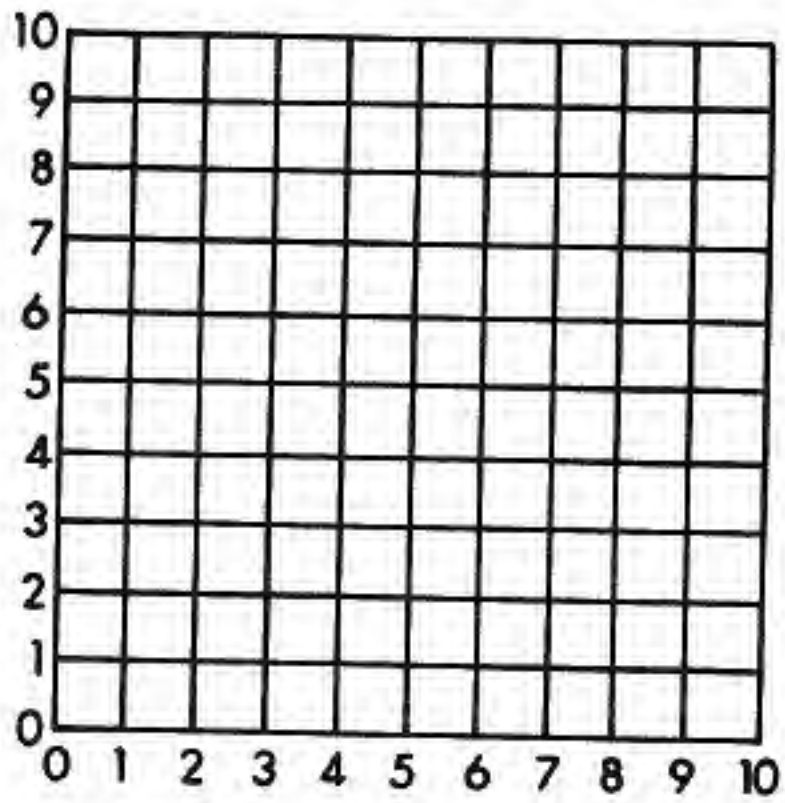


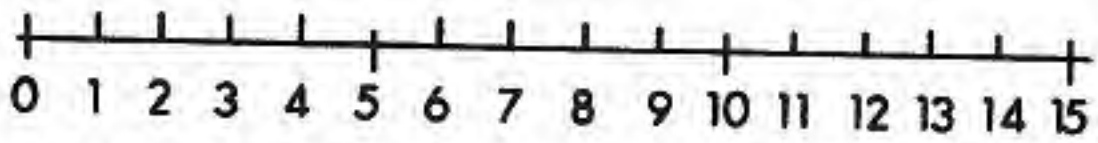
Your objective in this game is to find the four Mugwumps hiding on various squares of a 10 by 10 grid. Homebase (lower left) is position (0,0) and a guess is a pair of whole numbers (0 to 9), separated by commas. The first number is the number of units to the right of homebase and the second number is the distance above homebase.

You get ten guesses to locate the four Mugwumps; after each guess, the computer tells you how close you are to each Mugwump. Playing the game with the aid of graph paper and a compass should allow you to find all the Mugwumps in six or seven moves using triangulation similar to Loran radio navigation.

If you want to make the game somewhat more difficult, you can print the distance to each Mugwump either rounded or truneated to the nearest integer. Statement 390 would print either INT (D+.5) or INT (D).

This program was modified slightly by Bob Albrecht of People's Computer Company. It was originally written by students of Bud Valenti of Project SOLO in Pittsburgh, Pennsylvania.





Use this scale with a compass to help find the Mugwumps.

```
                  MUGWUMP
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THE OBJECT OF THIS GAME IS TO FIND FOUR MUGWUMPS
HIDDEN ON A 10 BY 10 GRID.  HOMEBASE IS POSITION 0,0
ANY GUESS YOU MAKE MUST BE TWO NUMBERS WITH EACH
NUMBER BETWEEN 0 AND 9, INCLUSIVE.  FIRST NUMBER
IS DISTANCE TO RIGHT OF HOMEBASE AND SECOND NUMBER
IS DISTANCE ABOVE HOMEBASE.

YOU GET 10 TRIES.  AFTER EACH TRY, I WILL TELL
YOU HOW FAR YOU ARE FROM EACH MUGWUMP.

TURN NO. 1 WHAT IS YOUR GUESS? 5,5
YOU ARE 4 UNITS FROM MUGWUMP 1
YOU ARE 3.1 UNITS FROM MUGWUMP 2
YOU ARE 4.2 UNITS FROM MUGWUMP 3
YOU ARE 5 UNITS FROM MUGWUMP 4

TURN NO. 2 WHAT IS YOUR GUESS? 0,0
YOU ARE 10.2 UNITS FROM MUGWUMP 1
YOU ARE 8.9 UNITS FROM MUGWUMP 2
YOU ARE 11.3 UNITS FROM MUGWUMP 3
YOU ARE 5 UNITS FROM MUGWUMP 4

TURN NO. 3 WHAT IS YOUR GUESS? 9,8
YOU ARE 3 UNITS FROM MUGWUMP 1
YOU ARE 4.1 UNITS FROM MUGWUMP 2
YOU ARE 1 UNITS FROM MUGWUMP 3
YOU ARE 8.9 UNITS FROM MUGWUMP 4

TURN NO. 4 WHAT IS YOUR GUESS? 9,9
YOU ARE 4 UNITS FROM MUGWUMP 1
YOU ARE 5 UNITS FROM MUGWUMP 2
YOU ARE 1.4 UNITS FROM MUGWUMP 3
YOU ARE 9.8 UNITS FROM MUGWUMP 4

TURN NO. 5 WHAT IS YOUR GUESS? 8,8
YOU ARE 3.1 UNITS FROM MUGWUMP 1
YOU ARE 4 UNITS FROM MUGWUMP 2
YOU HAVE FOUND MUGWUMP 3
YOU ARE 8.5 UNITS FROM MUGWUMP 4

TURN NO. 6 WHAT IS YOUR GUESS? 4,8
YOU ARE 5.8 UNITS FROM MUGWUMP 1
YOU ARE 5.6 UNITS FROM MUGWUMP 2
YOU ARE 8 UNITS FROM MUGWUMP 4

TURN NO. 7 WHAT IS YOUR GUESS? 3,7
YOU ARE 6.3 UNITS FROM MUGWUMP 1
YOU ARE 5.8 UNITS FROM MUGWUMP 2
YOU ARE 7.2 UNITS FROM MUGWUMP 4

TURN NO. 8 WHAT IS YOUR GUESS? 6,8
YOU ARE 4.2 UNITS FROM MUGWUMP 1
YOU ARE 4.4 UNITS FROM MUGWUMP 2
YOU ARE 8 UNITS FROM MUGWUMP 4

TURN NO. 9 WHAT IS YOUR GUESS? 6,0
YOU ARE 5.8 UNITS FROM MUGWUMP 1
YOU ARE 4.4 UNITS FROM MUGWUMP 2
YOU ARE 1 UNITS FROM MUGWUMP 4

TURN NO. 10 WHAT IS YOUR GUESS? 7,0
YOU ARE 5.3 UNITS FROM MUGWUMP 1
YOU ARE 4.1 UNITS FROM MUGWUMP 2
YOU ARE 2 UNITS FROM MUGWUMP 4

SORRY, THAT'S 10 TRIES.  HERE IS WHERE THEY'RE HIDING
MUGWUMP 1 IS AT ( 9 , 5 )
MUGWUMP 2 IS AT ( 8 , 4 )
MUGWUMP 4 IS AT ( 5 , 0 )

THAT WAS FUN!  LET'S PLAY AGAIN.....
FOUR MORE MUGWUMPS ARE NOW IN HIDING.

Name

NAME is a silly little ice-breaker to get a relationship going between a computer and a shy human. The sorting algorithm used is highly inefficient — as any reader of *Creative Computing* will recognize, this is the worst possible sort for speed. But the program is good fun and that's what counts here.

NAME was originally written by Geoffrey Chase of the Abbey, Portsmouth, Rhode Island.

I KNEW YOU'D AGREE!!

I REALLY ENJOYED MEETING YOU SUSAN JONES.
HAVE A NICE DAY!
```

Nicomachus

One of the most ancient forms of arithmetical puzzle is sometimes referred to as a "boomerang." At some time, everyone has been asked to "think of a number," and, after going through some process of private calculation, to state the result, after which the questioner promptly tells you the number you originally thought of. There are hundreds of varieties of the puzzle.

The oldest recorded example appears to be that given in *Arithmetica* of Nicomachus, who died about the year 120. He tells you to think of any whole number between 1 and 100 and divide it successively by 3, 5, and 7, telling him the remainder in each case. On receiving this information, he promptly discloses the number you thought of.

Can you discover a simple method of mentally performing this feat? If not, you can see how the ancient mathematician did it by looking at Lines 80-100 of the program.

Nicomachus was written by David Ahl.

Nim

NIM is one of the oldest two-person games known to man; it is believed to have originated in ancient China. The name, which was coined by the first mathematician to analyze it, comes from an archaic English verb which means to steal or to take away. Objects are arranged in rows between the two opponents as in the following example:

```
XXXXXXX Row 1 — 7 Objects
XXXXX   Row 2 — 5 Objects
XXX     Row 3 — 3 Objects
X       Row 4 — 1 Object
```

Opponents take turns removing objects until there are none left. The one who picks up the last object wins. The moves are made according to the following two rules:

1. On any given turn only objects from one row may be removed. There is no restriction on which row or on how many objects you remove. Of course, you cannot remove more than are in the row.
2. You cannot skip a move or remove zero objects.

The winning strategy can be mathematically defined, however, rather than presenting it here, we'd rather let you find it on your own. HINT: Play a few games with the computer and mark down on a piece of paper the number of objects in each stack (in binary!) after each move. Do you see a pattern emerging?

This game of NIM is from Dartmouth College and is a generalized game which allows you to specify any starting size for the four piles and also a win option. To play traditional NIM, you would simply specify 7,5,3, and 1, and win option 1.

```
                NIM
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

THIS IS THE GAME OF NIM.
DO YOU WANT INSTRUCTIONS? YES
THE GAME IS PLAYED WITH A NUMBER OF PILES OF OBJECTS.
ANY NUMBER OF OBJECTS  ARE REMOVED FROM ONE PILE BY YOU AND
THE MACHINE ALTERNATELY.  ON YOUR TURN, YOU MAY TAKE
ALL THE OBJECTS THAT REMAIN IN ANY PILE BUT YOU MUST
TAKE AT LEAST ONE OBJECT, AND YOU MAY TAKE OBJECTS FROM
ONLY ONE PILE ON A SINGLE TURN.  YOU MUST SPECIFY WHETHER
WINNING IS DEFINED AS TAKING OR NOT TAKING THE LAST OBJECT,
THE NUMBER OF PILES IN THE GAME, AND HOW MANY OBJECTS ARE
ORIGINALLY IN EACH PILE.  EACH PILE MAY CONTAIN A
DIFFERENT NUMBER OF OBJECTS.
THE MACHINE WILL SHOW ITS MOVE BY LISTING EACH PILE AND THE
NUMBER OF OBJECTS REMAINING IN THE PILES AFTER  EACH OF ITS
MOVES.

Number

In contrast to other number guessing games where you keep guessing until you get the random number selected by the computer (GUESS, TRAP, STARS, etc.), in this game you get only one guess per play and you gain or lose points depending upon how close your guess is to the random number selected by the computer. You occasionally get a jackpot which will double your point count. You win when you get 500 points.

Tom Adametx wrote this program while a student at Curtis Junior High School in Sudbury, Massachusetts.

```
YOU HAVE 100 POINTS.  BY GUESSING NUMBERS FROM 1 TO 5, YOU
CAN GAIN OR LOSE POINTS DEPENDING UPON HOW CLOSE YOU GET TO
A RANDOM NUMBER SELECTED BY THE COMPUTER.

YOU OCCASIONALLY WILL GET A JACKPOT WHICH WILL DOUBLE(!)
YOUR POINT COUNT.  YOU WIN WHEN YOU GET 500 POINTS.

GUESS A NUMBER FROM 1 TO 5? 2
YOU HAVE 95 POINTS.
GUESS A NUMBER FROM 1 TO 5? 2
YOU HAVE 90 POINTS.
GUESS A NUMBER FROM 1 TO 5? 2
YOU HAVE 95 POINTS.
GUESS A NUMBER FROM 1 TO 5? 2
YOU HAVE 96 POINTS.
GUESS A NUMBER FROM 1 TO 5? 2
YOU HIT THE JACKPOT!!!
YOU HAVE 192 POINTS.
GUESS A NUMBER FROM 1 TO 5? 3
YOU HIT THE JACKPOT!!!
YOU HAVE 384 POINTS.
GUESS A NUMBER FROM 1 TO 5? 1
YOU HAVE 389 POINTS.
GUESS A NUMBER FROM 1 TO 5? 2
YOU HAVE 394 POINTS.
GUESS A NUMBER FROM 1 TO 5? 5
YOU HIT THE JACKPOT!!!
!!!!YOU WIN!!!! WITH  788 POINTS.

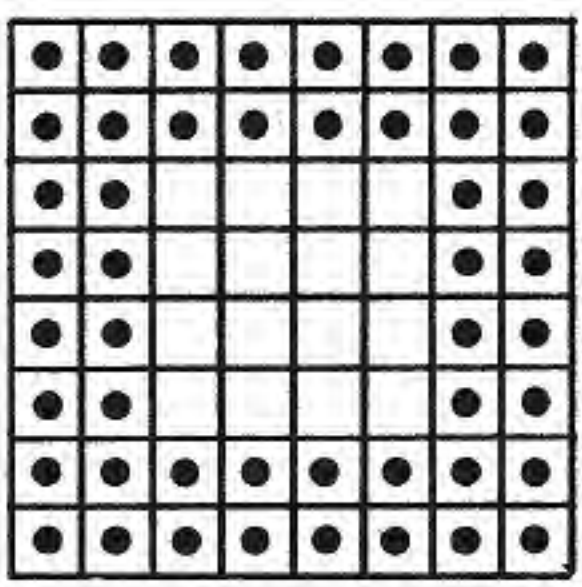
One Check

In this game or puzzle, 48 checkers are placed on the two outside spaces of a standard 64-square checkerboard as shown:



The object is to remove as many checkers as possible by diagonal jumps (as in standard checkers).

It is easy to remove 30 to 39 checkers, a challenge to remove 40 to 44, and a substantial feat to remove 45 to 47.

The program was created and written by David Ahl.

```
                ONE CHECK
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

SOLITAIRE CHECKER PUZZLE BY DAVID AHL

48 CHECKERS ARE PLACED ON THE 2 OUTSIDE SPACES OF A
STANDARD 64-SQUARE CHECKERBOARD.  THE OBJECT IS TO
REMOVE AS MANY CHECKERS AS POSSIBLE BY DIAGONAL JUMPS
(AS IN STANDARD CHECKERS).  USE THE NUMBERED BOARD TO
INDICATE THE SQUARE YOU WISH TO JUMP FROM AND TO.  ON
THE BOARD PRINTED OUT ON EACH TURN '1' INDICATES A
CHECKER AND '0' AN EMPTY SQUARE.  WHEN YOU HAVE NO
POSSIBLE JUMPS REMAINING, INPUT A '0' IN RESPONSE TO
QUESTION 'JUMP FROM ?'

HERE IS THE NUMERICAL BOARD:

 1  2  3  4  5  6  7  8
 9 10 11 12 13 14 15 16
17 18 19 20 21 22 23 24
25 26 27 28 29 30 31 32
33 34 35 36 37 38 39 40
41 42 43 44 45 46 47 48
49 50 51 52 53 54 55 56
57 58 59 60 61 62 63 64

AND HERE IS THE OPENING POSITION OF THE CHECKERS.

 1  1  1  1  1  1  1  1

orbit

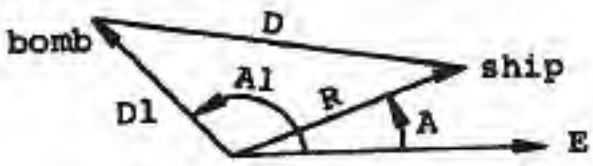
ORBIT challenges you to visualize spatial positions in polar coordinates. The object is to detonate a Photon explosive within a certain distance of a germ laden Romulan spaceship. This ship is orbiting a planet at a constant altitude and orbital rate (degrees/hour). The location of the ship is hidden by a device that renders the ship invisible, but after each bomb you are told how close to the enemy ship your bomb exploded. The challenge is to hit an invisible moving target with a limited number of shots.

The planet can be replaced by a point at its center (called the origin); then the ship's position can be given as a distance from the origin and an angle between its position and the eastern edge of the planet.

The distance of the bomb from the ship is computed using the law of cosines (see line 430 of the program listing). The law of cosines states

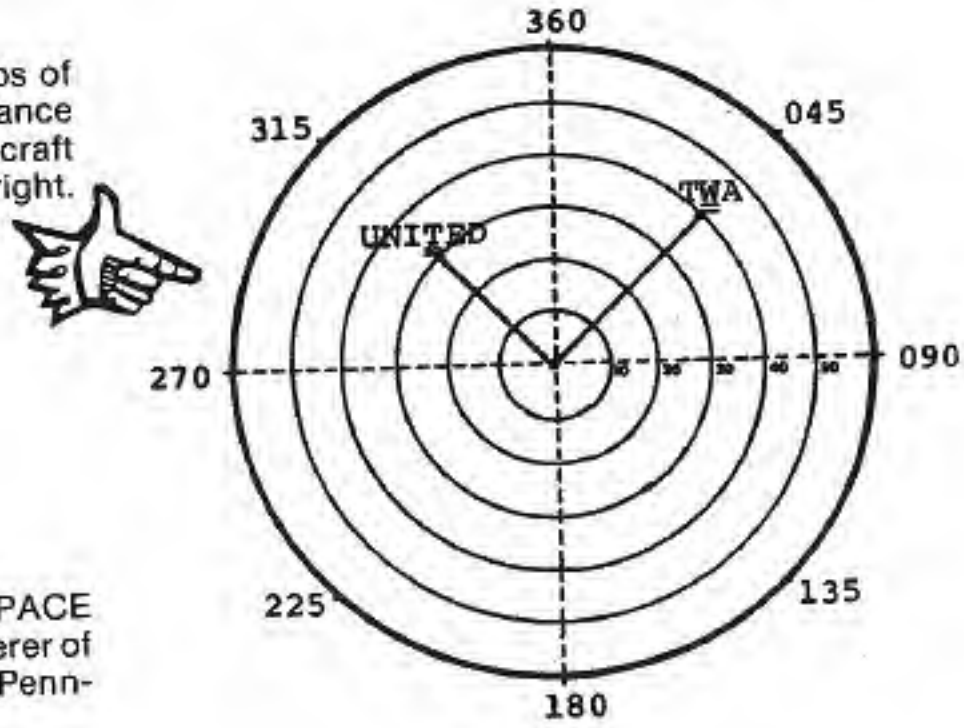
$$D=\sqrt{R^{**}2+D1^{**}2+R*D1*COS\ (A-A1)}$$

where D is the distance between the ship and the bomb, R is the altitude of the ship, D1 is the altitude of the bomb, and A-A1 is the angle between the ship and the bomb.



Practice Off-Line Problem:

Aircraft appear on radar as blips of the form "=". What is the distance between the TWA and United aircraft shown on the radar screen on the right.



ORBIT was originally called SPACE WAR and was written by Jeff Lederer of Project SOLO Pittsburgh, Pennsylvania.

```
                                ORBIT
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

SOMEWHERE ABOVE YOUR PLANET IS A ROMULAN SHIP.

THE SHIP IS IN A CONSTANT POLAR ORBIT.  ITS
DISTANCE FROM THE CENTER OF YOUR PLANET IS FROM
10,000 TO 30,000 MILES AND AT ITS PRESENT VELOCITY CAN
CIRCLE YOUR PLANET ONCE EVERY 12 TO 36 HOURS.

UNFORTUNATELY THEY ARE USING A CLOAKING DEVICE SO
YOU ARE UNABLE TO SEE THEM, BUT WITH A SPECIAL
INSTRUMENT YOU CAN TELL HOW NEAR THEIR SHIP YOUR
PHOTON BOMB EXPLODED.  YOU HAVE SEVEN HOURS UNTIL THEY
HAVE BUILT UP SUFFICIENT POWER IN ORDER TO ESCAPE
YOUR PLANET'S GRAVITY.

YOUR PLANET HAS ENOUGH POWER TO FIRE ONE BOMB AN HOUR.

AT THE BEGINNING OF EACH HOUR YOU WILL BE ASKED TO GIVE AN
ANGLE (BETWEEN 0 AND 360) AND A DISTANCE IN UNITS OF
100 MILES (BETWEEN 100 AND 300), AFTER WHICH YOUR BOMB'S
DISTANCE FROM THE ENEMY SHIP WILL BE GIVEN.

AN EXPLOSION WITHIN 5,000 MILES OF THE ROMULAN SHIP
WILL DESTROY  IT.

BELOW IS A DIAGRAM TO HELP YOU VISUALIZE YOUR PLIGHT.

                                90
                                .

                      0000000000000000000
                                !
                               270

X - YOUR PLANET
0 - THE ORBIT OF THE ROMULAN SHIP
```

```
ON THE ABOVE DIAGRAM, THE ROMULAN SHIP IS CIRCLING
COUNTERCLOCKWISE AROUND YOUR PLANET.  DON'T FORGET
WITHOUT SUFFICIENT POWER THE ROMULAN SHIP'S ALTITUDE
AND ORBITAL RATE WILL REMAIN CONSTANT.

GOOD LUCK.  THE FEDERATION IS COUNTING ON YOU.

HOUR  1 , AT WHAT ANGLE DO YOU WISH TO SEND
YOUR PHOTON BOMB? 90
HOW FAR OUT DO YOU WISH TO DETONATE IT? 250

YOUR PHOTON BOMB EXPLODED 270.671 *10^2 MILES FROM THE
ROMULAN SHIP.

HOUR  2 , AT WHAT ANGLE DO YOU WISH TO SEND
YOUR PHOTON BOMB? 260
HOW FAR OUT DO YOU WISH TO DETONATE IT? 200

YOUR PHOTON BOMB EXPLODED 382.522 *10^2 MILES FROM THE
ROMULAN SHIP.

HOUR  3 , AT WHAT ANGLE DO YOU WISH TO SEND
YOUR PHOTON BOMB? 35
HOW FAR OUT DO YOU WISH TO DETONATE IT? 200

YOUR PHOTON BOMB EXPLODED 136.808 *10^2 MILES FROM THE
ROMULAN SHIP.

HOUR  4 , AT WHAT ANGLE DO YOU WISH TO SEND
YOUR PHOTON BOMB? 20
HOW FAR OUT DO YOU WISH TO DETONATE IT? 300

YOUR PHOTON BOMB EXPLODED 342.719 *10^2 MILES FROM THE
ROMULAN SHIP.

HOUR  5 , AT WHAT ANGLE DO YOU WISH TO SEND
YOUR PHOTON BOMB? 40
HOW FAR OUT DO YOU WISH TO DETONATE IT? 100

YOUR PHOTON BOMB EXPLODED 228.24 *10^2 MILES FROM THE
ROMULAN SHIP.

HOUR  6 , AT WHAT ANGLE DO YOU WISH TO SEND
YOUR PHOTON BOMB? 55
HOW FAR OUT DO YOU WISH TO DETONATE IT? 209

YOUR PHOTON BOMB EXPLODED 328.821 *10^2 MILES FROM THE
ROMULAN SHIP.

HOUR  7 , AT WHAT ANGLE DO YOU WISH TO SEND
YOUR PHOTON BOMB? 20
HOW FAR OUT DO YOU WISH TO DETONATE IT? 100

YOUR PHOTON BOMB EXPLODED 299.178 *10^2 MILES FROM THE
ROMULAN SHIP.
YOU HAVE ALLOWED THE ROMULANS TO ESCAPE.
ANOTHER ROMULAN SHIP HAS GONE INTO ORBIT.
DO YOU WISH TO TRY TO DESTROY IT? I HATE COMPUTERS THAT NEVER LOSE
GOOD BYE.

Pizza

In this game, you take orders for pizzas from people living in Hyattsville. Armed with a map of the city, you must then tell your delivery boy the address where the pizza is to be delivered. If the pizza is delivered to the correct address, the customer phones you and thanks you; if not, you must give the driver the correct address until the pizza gets delivered.

Some interesting modifications suggest themselves for this program such as pizzas getting cold after two incorrect delivery attempts or taking three or more orders at a time and figuring the shortest delivery route. Send us your modifications!

This program seems to have surfaced originally at the University of Georgia in Athens, Georgia. The author is unknown.

```
THE ABOVE IS A MAP OF THE HOMES WHERE
YOU ARE TO SEND PIZZAS.

YOUR JOB IS TO GIVE A TRUCK DRIVER
THE LOCATION OR COORDINATES OF THE
HOME ORDERING THE PIZZA.

DO YOU NEED MORE DIRECTIONS? YES

SOMEBODY WILL ASK FOR A PIZZA TO BE
DELIVERED.  THEN A DELIVERY BOY WILL
ASK YOU FOR THE LOCATION.
     EXAMPLE:
THIS IS J.  PLEASE SEND A PIZZA.
DRIVER TO DARTH.  WHERE DOES J LIVE?
YOUR ANSWER WOULD BE 2,3

UNDERSTAND? YES
GOOD.  YOU ARE NOW READY TO START TAKING ORDERS.

GOOD LUCK!!

HELLO DARTH'S PIZZA.  THIS IS D.  PLEASE SEND A PIZZA.
  DRIVER TO DARTH.  WHERE DOES D LIVE? 4,1
HELLO DARTH.  THIS IS D, THANKS FOR THE PIZZA.

HELLO DARTH'S PIZZA.  THIS IS O.  PLEASE SEND A PIZZA.
  DRIVER TO DARTH.  WHERE DOES O LIVE? 3,4
HELLO DARTH.  THIS IS O, THANKS FOR THE PIZZA.

HELLO DARTH'S PIZZA.  THIS IS N.  PLEASE SEND A PIZZA.
  DRIVER TO DARTH.  WHERE DOES N LIVE? 4,2
THIS IS H.  I DID NOT ORDER A PIZZA.
I LIVE AT  4 , 2
  DRIVER TO DARTH.  WHERE DOES N LIVE? 2,4
HELLO DARTH.  THIS IS N, THANKS FOR THE PIZZA.

HELLO DARTH'S PIZZA.  THIS IS J.  PLEASE SEND A PIZZA.
  DRIVER TO DARTH.  WHERE DOES J LIVE? 2,3
HELLO DARTH.  THIS IS J, THANKS FOR THE PIZZA.

HELLO DARTH'S PIZZA.  THIS IS F.  PLEASE SEND A PIZZA.
  DRIVER TO DARTH.  WHERE DOES F LIVE? 2,2
HELLO DARTH.  THIS IS F, THANKS FOR THE PIZZA.

DO YOU WANT TO DELIVER MORE PIZZAS? NO

O.K. DARTH, SEE YOU LATER!

Poetry

This program produces random verse which might loosely be considered in the Japanese Haiku style. It uses 20 phrases in four groups of five phrases each and generally cycles through the groups in order. It inserts commas (random — 19% of the time), indentation (random — 22% of the time), and starts new paragraphs (18% probability, but at least once every 20 phrases).

The phrases in POETRY are somewhat suggestive of Edgar Allen Poe. Try it with phrases from computer technology, from love and romance, from four-year-old children, or from some other subject. Send us the output.

Here are some phrases from nature to try:

Carpet of ferns	Mighty Oaks
Morning dew	Grace and beauty
Tang of dawn	Silently singing
Swaying pines	Nature speaking
Entrances me	Untouched, unspoiled
Soothing me	Shades of green
Rustling leaves	Tranquility
Radiates calm	...so peaceful

The original author of this program is unknown. It was modified and reworked by Jim Bailey, Peggy Ewing, and Dave Ahl at DEC.

Poker

You and the computer are opponents in this game of draw poker. At the start of the game, each player is given $200. The game ends when either player runs out of money, although if you go broke the computer will offer to buy your wristwatch or diamond tie tack.

The computer opens the betting before the draw; you open the betting after the draw. If you don't have a hand that's worth anything and you want to fold, bet 0. Prior to the draw, to check the draw, you may bet .5. Of course, if the computer has made a bet, you must match it in order to draw or, if you have a good hand, you may raise the bet at any time.

The author is A. Christopher Hall of Trinity College, Hartford, Connecticut.

```
                 POKER
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

WELCOME TO THE CASINO.  WE EACH HAVE $200
I WILL OPEN THE BETTING BEFORE THE DRAW; YOU OPEN AFTER
WHEN YOU FOLD, BET 0; TO CHECK, BET .5
ENOUGH TALK -- LET'S GET DOWN TO BUSINESS

THE ANTE IS $5.  I WILL DEAL

YOUR HAND:
 1 --  JACK OF SPADES          2 --  QUEEN OF SPADES
 3 --   4  OF SPADES           4 --   3  OF SPADES
 5 --  QUEEN OF DIAMONDS

I CHECK
WHAT IS YOUR BET? 5
I'LL SEE YOU

NOW WE DRAW -- HOW MANY CARDS DO YOU WANT? 1
WHAT ARE THEIR NUMBERS
? 5
YOUR NEW HAND:
 1 --  JACK OF SPADES          2 --  QUEEN OF SPADES
 3 --   4  OF SPADES           4 --   3  OF SPADES
 5 --   3  OF HEARTS

I AM TAKING 3 CARDS

WHAT IS YOUR BET? 5
I'LL SEE YOU, AND RAISE YOU 8
WHAT IS YOUR BET? 8

NOW WE COMPARE HANDS
MY HAND:
 6 --   3  OF CLUBS
 7 --   5  OF HEARTS          8 --  QUEEN OF CLUBS
 9 --  QUEEN OF HEARTS        10 --  ACE OF SPADES

YOU HAVE A PAIR OF  3 S
AND I HAVE A PAIR OF QUEENS
THE HAND IS DRAWN
ALL $ 46 REMAINS IN THE POT

THE ANTE IS $5.  I WILL DEAL

YOUR HAND:
 1 --   8  OF CLUBS           2 --   7  OF SPADES
 3 --   6  OF HEARTS          4 --   2  OF CLUBS
 5 --   3  OF DIAMONDS

I'LL OPEN WITH  20
WHAT IS YOUR BET? 0

I WIN
NOW I HAVE $ 228 AND YOU HAVE $ 172
DO YOU WISH TO CONTINUE? YES

THE ANTE IS $5.  I WILL DEAL

YOUR HAND:
 1 --  ACE OF CLUBS           2 --  QUEEN OF CLUBS
 3 --  KING OF CLUBS          4 --   7  OF CLUBS
 5 --   2  OF SPADES

I CHECK
WHAT IS YOUR BET? 5
I'LL SEE YOU

NOW WE DRAW -- HOW MANY CARDS DO YOU WANT? 1
WHAT ARE THEIR NUMBERS
? 5
YOUR NEW HAND:
 1 --  ACE OF CLUBS           2 --  QUEEN OF CLUBS
 3 --  KING OF CLUBS          4 --   7  OF CLUBS
 5 --   5  OF CLUBS

I AM TAKING 1 CARD
WHAT IS YOUR BET? 100
I'LL SEE YOU, AND RAISE YOU 101
WHAT IS YOUR BET? 101

YOU CAN'T BET WITH WHAT YOU HAVEN'T GOT
WOULD YOU LIKE TO SELL YOUR WATCH? YES
I'LL GIVE YOU $75 FOR IT
WHAT IS YOUR BET? 101

NOW WE COMPARE HANDS
MY HAND:
 6 --   6  OF CLUBS
 7 --   8  OF DIAMONDS        8 --   8  OF CLUBS
 9 --   9  OF SPADES          10 --   9  OF CLUBS

YOU HAVE A FLUSH IN CLUBS
AND I HAVE TWO PAIR,  9 S
YOU WIN
NOW I HAVE $ 17 AND YOU HAVE $ 458
DO YOU WISH TO CONTINUE? YES

THE ANTE IS $5.  I WILL DEAL

YOUR HAND:
 1 --  JACK OF SPADES          2 --   4  OF CLUBS
 3 --  ACE OF CLUBS           4 --  QUEEN OF CLUBS
 5 --   5  OF HEARTS

I CHECK
WHAT IS YOUR BET? 5
I'LL SEE YOU

NOW WE DRAW -- HOW MANY CARDS DO YOU WANT? 2
WHAT ARE THEIR NUMBERS
? 2
? 5
YOUR NEW HAND:
 1 --  JACK OF SPADES          2 --   5  OF CLUBS
 3 --  ACE OF CLUBS           4 --  QUEEN OF CLUBS
 5 --   9  OF DIAMONDS

I AM TAKING 1 CARD
WHAT IS YOUR BET? 5
I'LL SEE YOU

NOW WE COMPARE HANDS
MY HAND:
 6 --   3  OF HEARTS
 7 --   6  OF HEARTS          8 --   7  OF HEARTS
 9 --   9  OF CLUBS           10 --  ACE OF HEARTS

YOU HAVE SCHMALTZ, ACE HIGH
AND I HAVE SCHMALTZ, ACE HIGH
THE HAND IS DRAWN
ALL $ 30 REMAINS IN THE POT

I'M BUSTED.  CONGRATULATIONS!

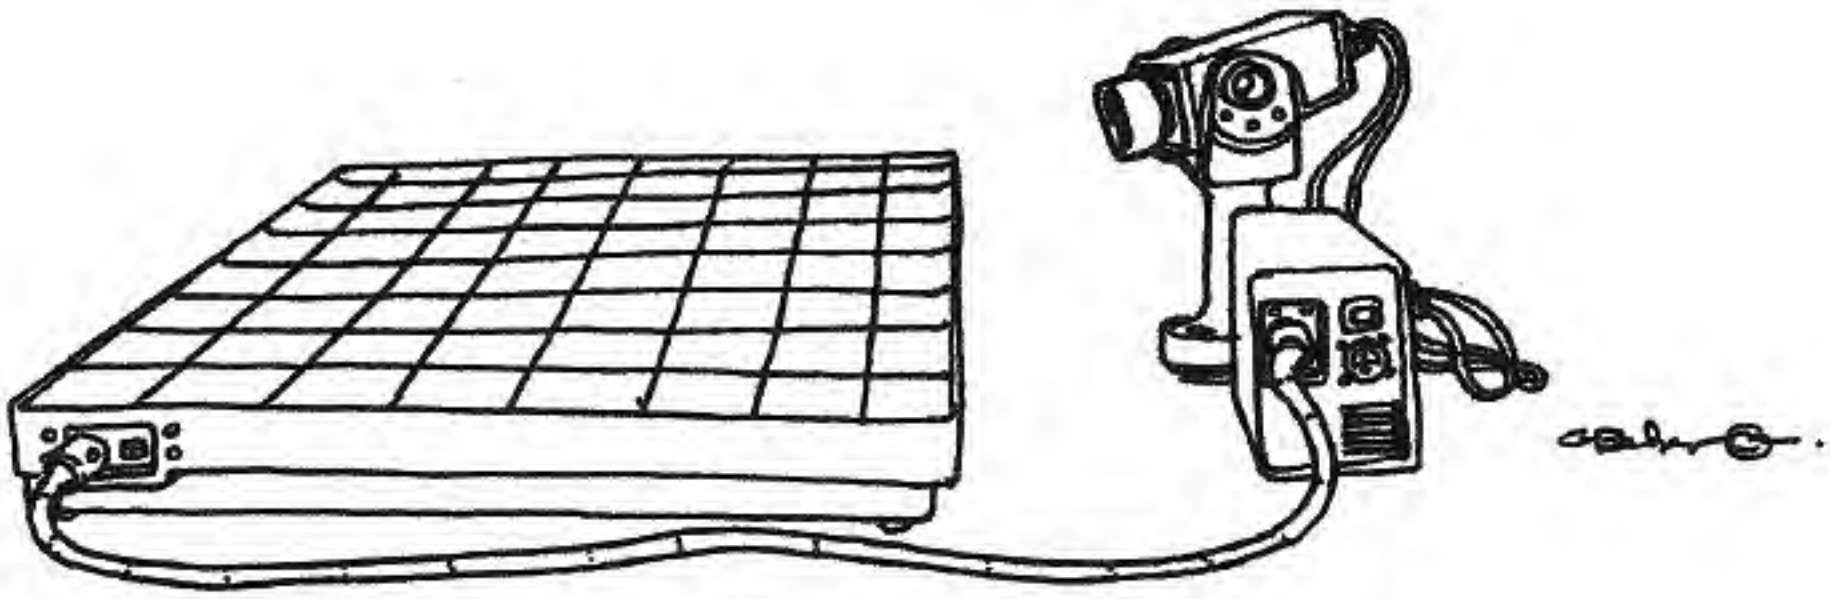
LEFT
HAND
THREAD

Queen



This game is based on the permissible moves of the chess queen — i.e., along any vertical, horizontal, or diagonal. In this game, the queen can only move to the left, down, and diagonally down to the left.

The object of the game is to place the queen (one only) in the lower left-hand square (no. 158), by alternating moves between you and the computer. The one to place the queen there wins.

You go first and place the queen in any one of the squares on the top row or the right-hand column. That is your first move. The computer is beatable, but it takes some figuring. See if you can devise a winning strategy.

```
                  QUEEN
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES
WE ARE GOING TO PLAY A GAME BASED ON ONE OF THE CHESS
MOVES.  OUR QUEEN WILL BE ABLE TO MOVE ONLY TO THE LEFT,
DOWN, OR DIAGONALLY DOWN AND TO THE LEFT.

THE OBJECT OF THE GAME IS TO PLACE THE QUEEN IN THE LOWER
LEFT HAND SQUARE BY ALTERNATING MOVES BETWEEN YOU AND THE
COMPUTER.  THE FIRST ONE TO PLACE THE QUEEN THERE WINS.

YOU GO FIRST AND PLACE THE QUEEN IN ANY ONE OF THE SQUARES
ON THE TOP ROW OR RIGHT HAND COLUMN.
THAT WILL BE YOUR FIRST MOVE.
WE ALTERNATE MOVES.
YOU MAY FORFEIT BY TYPING '0' AS YOUR MOVE.
BE SURE TO PRESS THE RETURN KEY AFTER EACH RESPONSE.
```

Reverse

The game of REVERSE requires you to arrange a list of numbers in numerical order from left to right. To move, you tell the computer how many numbers (counting from the left) to reverse. For example, if the current list is:

2 3 4 5 1 6 7 8 9

and you reverse 4, the result will be:

5 4 3 2 1 6 7 8 9

Now if you reverse 5, you win!

There are many ways to beat the game, but approaches tend to be either algorithmic or heuristic. The game thus offers the player a chance to play with these concepts in a practical (rather than theoretical) context.

An algorithmic approach guarantees a solution in a predictable number of moves, given the number of items in the list. For example, one method guarantees a solution in 2N - 3 moves when the list contains N numbers. The essence of an algorithmic approach is that you know in advance what your next move will be. One could easily program a computer to do this.

A heuristic approach takes advantage of "partial orderings" in the list at any moment. Using this type of approach, your next move is dependent on the way the list currently appears. This way of solving the problem does not guarantee a solution in a predictable number of moves, but if you are lucky and clever, you may come out ahead of the algorithmic solutions. One could not so easily program this method.

In practice, many players adopt a "mixed" strategy, with both algorithmic and heuristic features. Is this better than either "pure" strategy?

The program was created by Peter Sessions of People's Computer Company and the notes above adapted from his original write-up.

```
                REVERSE
  CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

REVERSE -- A GAME OF SKILL

DO YOU WANT THE RULES? YES

THIS IS THE GAME OF 'REVERSE'.  TO WIN, ALL YOU HAVE
TO DO IS ARRANGE A LIST OF NUMBERS (1 THROUGH 9 )
IN NUMERICAL ORDER FROM LEFT TO RIGHT. TO MOVE, YOU
TELL ME HOW MANY NUMBERS (COUNTING FROM THE LEFT) TO
REVERSE.  FOR EXAMPLE, IF THE CURRENT LIST IS:

2 3 4 5 1 6 7 8 9

AND YOU REVERSE 4, THE RESULT WILL BE:

5 4 3 2 1 6 7 8 9

NOW IF YOU REVERSE 5, YOU WIN!

1 2 3 4 5 6 7 8 9

NO DOUBT YOU WILL LIKE THIS GAME, BUT
IF YOU WANT TO QUIT, REVERSE 0 (ZERO).

HERE WE GO ... THE LIST IS:

 2  4  5  1  9  6  3  7  8

HOW MANY SHALL I REVERSE? 9

 8  7  3  6  9  1  5  4  2

HOW MANY SHALL I REVERSE? 4

 6  3  7  8  9  1  5  4  2

HOW MANY SHALL I REVERSE? 5

 9  8  7  3  6  1  5  4  2

HOW MANY SHALL I REVERSE? 9

 2  4  5  1  6  3  7  8  9

HOW MANY SHALL I REVERSE? 3

 5  4  2  1  6  3  7  8  9

HOW MANY SHALL I REVERSE? 4

 1  2  4  5  6  3  7  8  9

HOW MANY SHALL I REVERSE? 6

 3  6  5  4  2  1  7  8  9

HOW MANY SHALL I REVERSE? 4

 4  5  6  3  2  1  7  8  9

HOW MANY SHALL I REVERSE? 3

 6  5  4  3  2  1  7  8  9

HOW MANY SHALL I REVERSE? 6

 1  2  3  4  5  6  7  8  9

YOU WON IT IN 10 MOVES!!!

TRY AGAIN (YES OR NO)? NO

O.K.  HOPE YOU HAD FUN!!

Rock, Scissors, Paper

Remember the game of rock-scissors-paper. You and your opponent make a motion three times with your fists and then either show a flat hand (paper), fist (rock), or two fingers (scissors). Depending upon what is shown, the game is a tie (both show the same) or one person wins. Paper wraps up rock, so it wins. Scissors cut paper, so they win. And rock breaks scissors, so it wins.

In this computerized version of rock-scissors-paper, you can play up to ten games vs. the computer.

Charles Lund wrote this game while at the American School in The Hague, Netherlands.

HERE IS THE FINAL GAME SCORE:
I HAVE WON 4 GAME(S).
YOU HAVE WON 4 GAME(S).
AND 2 GAME(S) ENDED IN A TIE.
```

Roulette

This game simulates an American Roulette wheel; "American" because it has 38 number compartments (1 to 36, 0 and 00). The European wheel has 37 numbers (1 to 36 and 0). The Bahamas, Puerto Rico, and South American countries are slowly switching to the American wheel because it gives the house a bigger percentage. Odd and even numbers alternate around the wheel, as do red and black. The layout of the wheel insures a highly random number pattern. In fact, roulette wheels are sometimes used to generate tables of random numbers.

In this game, you may bet from $5 to $500 and you may bet on red or black, odd or even, first or second 18 numbers, a column, or single number. You may place any number of bets on each spin of the wheel.

There is no long-range winning strategy for playing roulette. However, a good strategy is that of "doubling." First spin, bet $1 on an even/odds bet (odd, even, red, or black). If you lose, double your bet to $2. If you lose again, double to $4. Continue to double until you win (i.e., you break even on a losing sequence). As soon as you win, bet $1 again, and after every win, bet $1. Do not ever bet more than $1 unless you are recuperating losses by doubling. Do not ever bet anything but the even odds bets. Good luck!

TYPES OF BETS

THE NUMBERS 1 TO 36 SIGNIFY A STRAIGHT BET
ON THAT NUMBER
THESE PAY OFF 35:1

THE 2:1 BETS ARE:
 37) 1-12      40) FIRST COLUMN
 38) 13-24     41) SECOND COLUMN
 39) 25-36     42) THIRD COLUMN

THE EVEN MONEY BETS ARE:
 43) 1-18      46) ODD
 44) 19-36     47) RED
 45) EVEN      48) BLACK

 49)0 AND 50)00 PAY OFF 35:1
 NOTE: 0 AND 00 DO NOT COUNT UNDER ANY
       BETS EXCEPT THEIR OWN

WHEN I ASK FOR EACH BET,TYPE THE NUMBER
AND THE AMOUNT,SEPARATED BY A COMMA
FOR EXAMPLE:TO BET $500 ON BLACK,TYPE 48,500
WHEN I ASK FOR A BET

MINIMUM BET IS $5,MAXIMUM IS $500

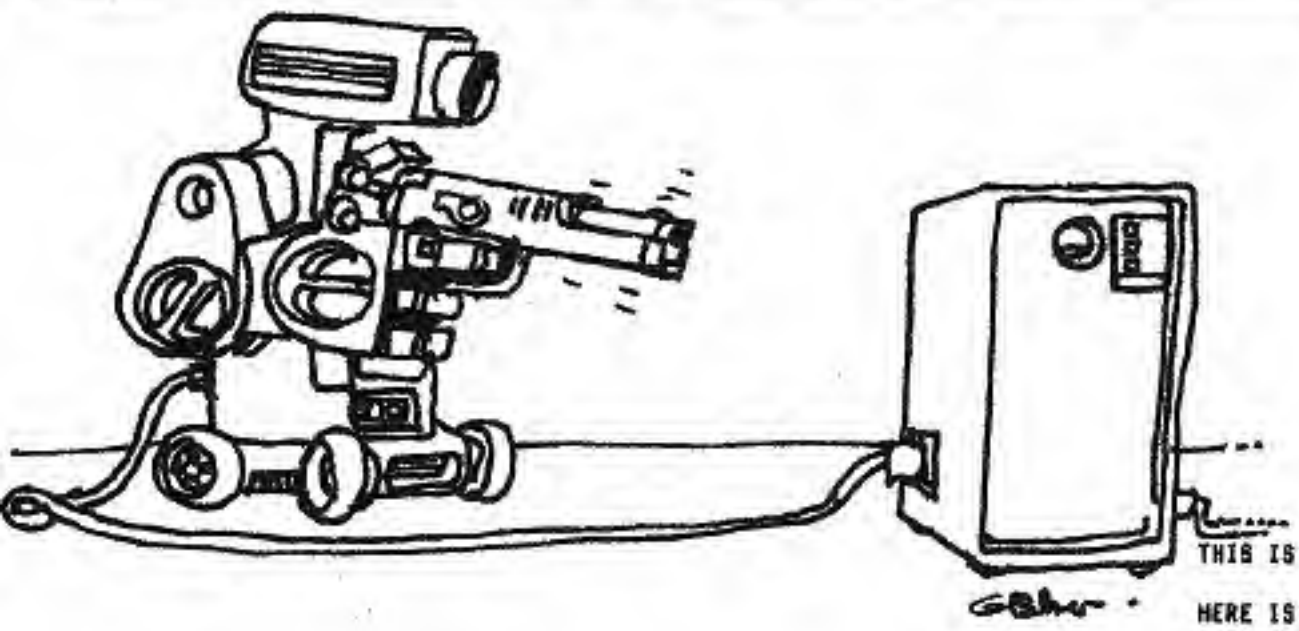
Russian Roulette



In this game, you are given by the computer a revolver loaded with one bullet and five empty chambers. You spin the chamber and pull the trigger by inputting a "1," or, if you want to quit, input a "2." You win if you play ten times and are still alive.

Tom Adametx wrote this program while a student at Curtis Jr. High School in Sudbury, Massachusetts.

Salvo

The rules are *not* explained by the program, so read carefully this description by Larry Siegel, the program author.

SALVO is played on a 10x10 grid or board using an x,y coordinate system. The player has 4 ships: battleship (5 squares), cruiser (3 squares), and two destroyers (2 squares each). The ships may be placed horizontally, vertically, or diagonally and must not overlap. The ships do not move during the game.

As long as any square of a battleship still survives, the player is allowed three shots, for a cruiser 2 shots, and for each destroyer 1 shot. Thus, at the beginning of the game the player has 3+2+1+1=7 shots. The player enters all of his shots and the computer tells what was hit. A shot is entered by its grid coordinates, x,y. The winner is the one who sinks all of the opponent's ships.

Important note: Your ships and the computer's ships are located on 2 *separate* 10x10 boards.

Author of the program is Lawrence Siegel of Shaker Heights, Ohio.

Sine Wave

Did you ever go to a computer show and see a bunch of CRT terminals just sitting there waiting forlornly for someone to give a demo on them. It was one of those moments when I was at DEC that I decided there should be a little bit of background activity. And why not plot with words instead of the usual X's? Thus SINE WAVE was born and lives on in dozens of different versions. At least those CRTs don't look so lifeless anymore.

Slalom

This game simulates a slalom run down a course with from one to 25 gates. The user picks the number of gates and has some control over his speed down the course.

If you're not a skier, here's your golden opportunity to try it with minimal risk. If you are a skier, here's something to do while your leg is in a cast.

SLALOM was written by J. Panek while a student at Dartmouth College.

```
                  SLALOM
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

HOW MANY GATES DOES THIS COURSE HAVE (1 TO 25)? 12

TYPE "INS" FOR INSTRUCTIONS
TYPE "MAX" FOR APPROXIMATE MAXIMUM SPEEDS
TYPE "RUN" FOR THE BEGINNING OF THE RACE
COMMAND--? INS

***SLALOM:  THIS IS THE 1976 WINTER OLYMPIC GIANT SLALOM.  YOU ARE
            THE AMERICAN TEAM'S ONLY HOPE OF A GOLD MEDAL.

Slots

The slot machine or one-arm bandit is a mechanical device that will absorb coins just about as fast as you can feed it. After inserting a coin, you pull a handle that sets three independent reels spinning. If the reels stop with certain symbols appearing in the pay line, you get a certain payoff. The original slot machine, called the Liberty Bell, was invented in 1895 by Charles Fey in San Francisco. Fey refused to sell or lease the manufacturing rights, so H.S. Mills in Chicago built a similar, but much improved, machine called the Operators Bell. This has survived nearly unchanged to today.

On the Operators Bell and other standard slot machines, there are 20 symbols on each wheel but they are not distributed evenly among the objects (cherries, bar, apples, etc.). Of the 8,000 possible combinations, the expected payoff (to the player) is 7,049 or $89.11 for every $100.00 put in, one of the lowest expected payoffs of all casino games.

In the program here, the payoff is considerably more liberal; indeed it appears to favor the player by 11% — i.e., an expected payoff of $111 for each $100 bet.

The program was originally written by Fred Mirabelle and Bob Harper.

```
                SLOTS
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

YOU ARE IN THE H&M CASINO,IN FRONT OF ONE OF OUR
ONE-ARMED BANDITS. BET FROM $1 TO $100.
TO PULL THE ARM, PUNCH THE RETURN KEY AFTER MAKING YOUR BET.

YOUR BET? 5

LEMON CHERRY BELL

YOU LOST.

Splat

SPLAT simulates a parachute jump in which you try to open your parachute at the last possible moment without going splat! You may select your own terminal velocity or let the computer do it for you. You may also select the acceleration due to gravity or, again, let the computer do it in which case you might wind up on any one of eight planets (out to Neptune), the moon, or the sun.

The computer then tells you the height you're jumping from and asks for the seconds of free fall. It then divides your free fall time into eight intervals and gives you progress reports on your way down. The computer also keeps track of all prior jumps in the array A and lets you know how you compared with previous successful jumps. If you want to recall information from previous runs, then you should store array A in a disk or tape file and read it in before each run.

John Yegge created this program while at the Oak Ridge Associated Universities.

```
                              SPLAT
               CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

WELCOME TO 'SPLAT' -- THE GAME THAT SIMULATES A PARACHUTE
JUMP.  TRY TO OPEN YOUR CHUTE AT THE LAST POSSIBLE
MOMENT WITHOUT GOING SPLAT.

 SELECT YOUR OWN TERMINAL VELOCITY (YES OR NO)? NO
OK.  TERMINAL VELOCITY = 45 MI/HR
WANT TO SELECT ACCELERATION DUE TO GRAVITY (YES OR NO)? NO
FINE. YOU'RE ON THE SUN. ACCELERATION=896FT/SEC/SEC

    ALTITUDE         = 8680 FT
    TERM.VELOCITY    = 66 FT/SEC +-5%
    ACCELERATION     = 896 FT/SEC/SEC +-5%
SET THE TIMER FOR YOUR FREEFALL.
HOW MANY SECONDS? 8
HERE WE GO.

Stars

In this game, the computer selects a random number from 1 to 100 (or any value you set in Statement 150). You try to guess the number and the computer gives you clues to tell you how close you're getting. One star (*) means you're far away from the number; seven stars (*******) means you're really close. You get 7 guesses.

On the surface this game is very similar to GUESS; however, the guessing strategy is quite different. See if you can come up with one or more approaches to finding the mystery number.

Bob Albrecht of People's Computer Company created this game.

```
                  STARS
 CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES
I AM THINKING OF A WHOLE NUMBER FROM 1 TO 100
TRY TO GUESS MY NUMBER.  AFTER YOU GUESS, I
WILL TYPE ONE OR MORE STARS (*).  THE MORE
STARS I TYPE, THE CLOSER YOU ARE TO MY NUMBER.
ONE STAR (*) MEANS FAR AWAY, SEVEN STARS (*******)
MEANS REALLY CLOSE!  YOU GET 7 GUESSES.

OK, I AM THINKING OF A NUMBER, START GUESSING.

Stock Market

This program "plays" the stock market. You will be given $10,000 and may buy or sell stocks. Stock prices and trends are generated randomly; therefore, this model does not represent exactly what happens on the exchange. (Depending upon your point of view, you may feel this is quite a good representation!)

Every trading day, a table of stocks, their prices, and number of shares in your portfolio is printed. Following this, the initials of each stock are printed followed by a question mark. You indicate your transaction in number of shares — a positive number to buy, negative number to sell, or 0 to do no trading. A brokerage fee of 1% is charged on all transactions (a bargain!). Note: Even if the value of a stock drops to zero, it may rebound again — then again, it may not.

This program was created by D. Pessel, L. Braun, and C. Losik of the Huntington Computer Project at SUNY, Stony Brook, N.Y.

```
                STOCK MARKET
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT THE INSTRUCTIONS (YES-TYPE 1, NO-TYPE 0)? 1

THIS PROGRAM PLAYS THE STOCK MARKET.  YOU WILL BE GIVEN
$10,000 AND MAY BUY OR SELL STOCKS.  THE STOCK PRICES WILL
BE GENERATED RANDOMLY AND THEREFORE THIS MODEL DOES NOT
REPRESENT EXACTLY WHAT HAPPENS ON THE EXCHANGE.  A TABLE
OF AVAILABLE STOCKS, THEIR PRICES, AND THE NUMBER OF SHARES
IN YOUR PORTFOLIO WILL BE PRINTED.  FOLLOWING THIS, THE
INITIALS OF EACH STOCK WILL BE PRINTED WITH A QUESTION
MARK.  HERE YOU INDICATE A TRANSACTION.  TO BUY A STOCK
TYPE +NNN, TO SELL A STOCK TYPE -NNN, WHERE NNN IS THE
NUMBER OF SHARES.  A BROKERAGE FEE OF 1% WILL BE CHARGED
ON ALL TRANSACTIONS.  NOTE THAT IF A STOCK'S VALUE DROPS
TO ZERO IT MAY REBOUND TO A POSITIVE VALUE AGAIN.  YOU
HAVE $10,000 TO INVEST.  USE INTEGERS FOR ALL YOUR INPUTS.
(NOTE:  TO GET A 'FEEL' FOR THE MARKET RUN FOR AT LEAST
TEN DAYS)
-----GOOD LUCK!-----

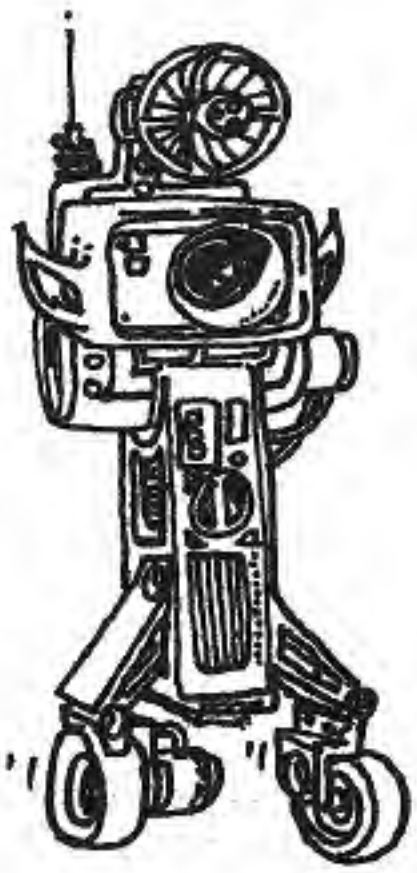
Super Star Trek®

Brief History

Many versions of Star Trek have been kicking around various college campuses since the late sixties. I recall playing one at Carnegie-Mellon Univ. in 1967 or 68, and a very different one at Berkeley. However, these were a far cry from the one written by Mike Mayfield of Centerline Engineering and/or Custom Data. This was written for an HP2000C and completed in October 1972. It became the "standard" Star Trek in February 1973 when it was put in the HP contributed program library and onto a number of HP Data Center machines.

In the summer of 1973, I converted the HP version to BASIC-PLUS for DEC's RSTS-11 compiler and added a few bits and pieces while I was at it. Mary Cole at DEC contributed enormously to this task too. Later that year I published it under the name SPACWR (Space War — in retrospect, an incorrect name) in my book *101 Basic Computer Games*. It is difficult today to find an interactive computer installation that does not have one of these versions of Star Trek available.



Quadrant Nomenclature

Recently, certain critics have professed confusion as to the origin of the "quadrant" nomenclature used on all standard CG (Cartesian Galactic) maps. Naturally, for anyone with the remotest knowledge of history, no explanation is necessary; however, the following synopsis should suffice for the critics:

As every schoolboy knows, most of the intelligent civilizations in the Milky Way had originated galactic designations of their own choosing well before the Third Magellanic Conference, at which the so-called "2^6 Agreement" was reached. In that historic document, the participant cultures agreed, in all two-dimensional representations of the galaxy, to specify 64 major subdivisions, ordered as an 8 x 8 matrix. This was partially in deference to the Earth culture (which had done much in the initial organization of the Federation), whose century-old galactic maps had always shown 16 major regions named after celestial landmarks of the Earth sky. Each of these regions was divided into four "quadrants," designated by ancient "Roman Numerals" (the origin of which has been lost).

To this day, the official logs of starships originating on near-Earth starbases still refer to the major galactic areas as "quadrants."

The relation between the Historical and Standard nomenclatures is shown in the simplified CG map below.

	1	2	3	4	5	6	7	8
1	I	ANTARES II	III	IV	I	SIRIUS II	III	IV
2	I	RIGEL II	III	IV	I	DENEB II	III	IV
3	I	PROCYON II	III	IV	I	CAPELLA II	III	IV
4	I	VEGA II	III	IV	I	BETELGEUSE II	III	IV
5	I	CANOPUS II	III	IV	I	ALDEBARAN II	III	IV
6	I	ALTAIR II	III	IV	I	REGULUS II	III	I
7	I	SAGITTARIUS II	III	IV	I	ARCTURUS II	III	IV
8	I	POLLUX II	III	IV	I	SPICA II	III	IV

Super Star Trek Rules and Notes

by Robert Leedom and David Ahl

1. OBJECTIVE: You are Captain of the starship "Enterprise"† with a mission to seek and destroy a fleet of Klingon† warships (usually about 17) which are menacing the United Federation of Planets.† You have a specified number of stardates in which to complete your mission. You also have two or three Federation Starbases† for resupplying your ship.

2. You will be assigned a starting position somewhere in the galaxy. The galaxy is divided into an 8 x 8 quadrant grid. The astronomical name of a quadrant is called out upon entry into a new region. (See "Quadrant Nomenclature.") Each quadrant is further divided into an 8 x 8 section grid.

3. On a section diagram, the following symbols are used:

<°>	Enterprise	>!<	Starbase
†††	Klingon	*	Star

4. You have eight commands available to you. (A detailed description of each command is given in the program instructions.)

NAV	Navigate the Starship by setting course and warp engine speed.
SRS	Short-range sensor scan (one quadrant)
LRS	Long-range sensor scan (9 quadrants)
PHA	Phaser† control (energy gun)
TOR	Photon torpedo control
SHE	Shield control (protects against phaser fire)
DAM	Damage and state-of-repair report
COM	Call library computer

5. Library computer options are as follows (more complete descriptions are in program instructions):

0	Cumulative galactic record
1	Status report
2	Photon torpedo course data
3	Starbase navigation data
4	Direction/distance calculator
5	Quadrant nomenclature map

6. Certain reports on the ship's status are made by officers of the Enterprise who appeared on the original TV Show —Spock,† Scott,† Uhura,† Chekov,† etc.

7. Klingons are non-stationary within their quadrants. If you try to maneuver on them, they will move and fire on you.

8. Firing and damage notes:

A. Phaser fire diminishes with increased distance between combatants.
B. If a Klingon zaps you hard enough (relative toyour shield strength) he will generally cause damage to some part of your ship with an appropriate "Damage Control" report resulting.
C. If you don't zap a Klingon hard enough (relative to his shield strength) you won't damage him at all. Your sensors will tell the story.
D. Damage control will let you know when out-of-commission devices have been completely repaired.

9. Your engines will automatically shut down if you should attempt to leave the galaxy, or if you should try to maneuver through a star, a Starbase, or—heaven help you—a Klingon warship.

10. In a pinch, or if you should miscalculate slightly, some shield control energy will be automatically diverted to warp engine control (if your shields are operational!).

11. While you're docked at a Starbase, a team of technicians can repair your ship (if you're willing for them to spend the time required—and the repairmen *always* underestimate...).

12. If, to save maneuvering time toward the end of the game, you should cold-bloodedly destroy a Starbase, you get a nasty note from Starfleet Command. If you destroy your *last* Starbase, you lose the game! (For those who think this is too harsh a penalty, delete lines 5360-5390, and you'll just get a "you dumdum!"-type message on all future status reports.)

13. End game logic has been "cleaned up" in several spots, and it is possible to get a new command after successfully completing your mission (or, after resigning your old one).

14. For those of you with certain types of CRT/keyboards setups (e.g. Westinghouse 1600), a "bell" character is inserted at appropriate spots to cause the following items to flash on and off on the screen:

- The Phrase "*RED*" (as in Condition: Red)
- The character representing your present quadrant in the cumulative galactic record printout.

15. This version of Star Trek was created for a Data General Nova 800 system with 32K or core. So that it would fit, the instructions are separated from the main program via a CHAIN. For conversion to DEC BASIC-PLUS, Statement 160 (Randomize) should be moved after the return from the chained instructions, say to Statement 245. For Altair BASIC, Randomize and the chain instructions should be eliminated.

DO YOU NEED INSTRUCTIONS (Y/N)? Y

TURN THE TTY ON-LINE AND HIT ANY KEY EXCEPT RETURN
     INSTRUCTIONS FOR 'SUPER STAR TREK'

1. WHEN YOU SEE \COMMAND ?\ PRINTED, ENTER ONE OF THE LEGAL
     COMMANDS (NAV,SRS,LRS,PHA,TOR,SHE,DAM,COM, OR XXX).
2. IF YOU SHOULD TYPE IN AN ILLEGAL COMMAND, YOU'LL GET A SHORT
     LIST OF THE LEGAL COMMANDS PRINTED OUT.
3. SOME COMMANDS REQUIRE YOU TO ENTER DATA (FOR EXAMPLE, THE
     'NAV' COMMAND COMES BACK WITH 'COURSE (1-9) ?'.)  IF YOU
     TYPE IN ILLEGAL DATA (LIKE NEGATIVE NUMBERS), THAT COMMAND
     WILL BE ABORTED

     THE GALAXY IS DIVIDED INTO AN 8 X 8 QUADRANT GRID,
AND EACH QUADRANT IS FURTHER DIVIDED INTO AN 8 X 8 SECTOR GRID.

     YOU WILL BE ASSIGNED A STARTING POINT SOMEWHERE IN THE
GALAXY TO BEGIN A TOUR OF DUTY AS COMMANDER OF THE STARSHIP
\ENTERPRISE\; YOUR MISSION: TO SEEK AND DESTROY THE FLEET OF
KLINGON WARSHIPS WHICH ARE MENACING THE UNITED FEDERATION OF
PLANETS.

     YOU HAVE THE FOLLOWING COMMANDS AVAILABLE TO YOU AS CAPTAIN
OF THE STARSHIP ENTERPRISE:

\NAV\ COMMAND = WARP ENGINE CONTROL --
     COURSE IS IN A CIRCULAR NUMERICAL       4  3  2
     VECTOR ARRANGEMENT AS SHOWN              . . .
     INTEGER AND REAL VALUES MAY BE            ...
     USED.  (THUS COURSE 1.5 IS HALF-       5 ---*--- 1
     WAY BETWEEN 1 AND 2                       ...
                                              . . .
     VALUES MAY APPROACH 9.0, WHICH           6  7  8
     ITSELF IS EQUIVALENT TO 1.0
                                                COURSE
     ONE WARP FACTOR IS THE SIZE OF
     ONE QUADTANT.  THEREFORE, TO GET
     FROM QUADRANT 6,5 TO 5,5, YOU WOULD
     USE COURSE 3, WARP FACTOR 1.

\SRS\ COMMAND = SHORT RANGE SENSOR SCAN
     SHOWS YOU A SCAN OF YOUR PRESENT QUADRANT.

     SYMBOLOGY ON YOUR SENSOR SCREEN IS AS FOLLOWS:
        <*> = YOUR STARSHIP'S POSITION
        +K+ = KLINGON BATTLE CRUISER
        >!< = FEDERATION STARBASE (REFUEL/REPAIR/RE-ARM HERE!)
         *  = STAR

     A CONDENSED 'STATUS REPORT' WILL ALSO BE PRESENTED.

\LRS\ COMMAND = LONG RANGE SENSOR SCAN
     SHOWS CONDITIONS IN SPACE FOR ONE QUADRANT ON EACH SIDE
     OF THE ENTERPRISE (WHICH IS IN THE MIDDLE OF THE SCAN)
     THE SCAN IS CODED IN THE FORM \###\, WHERE TH UNITS DIGIT
     IS THE NUMBER OF STARS, THE TENS DIGIT IS THE NUMBER OF
     STARBASES, AND THE HUNDRESDS DIGIT IS THE NUMBER OF
     KLINGONS.

     EXAMPLE - 207 = 2 KLINGONS, NO STARBASES, & 7 STARS.

\PHA\ COMMAND = PHASER CONTROL.
     ALLOWS YOU TO DESTROY THE KLINGON BATTLE CRUISERS BY
     ZAPPING THEM WITH SUITABLY LARGE UNITS OF ENERGY TO
     DEPLETE THEIR SHIELD POWER.  (REMBER, KLINGONS HAVE
     PHASERS TOO!)

\TOR\ COMMAND = PHOTON TORPEDO CONTROL
     TORPEDO COURSE IS THE SAME AS USED IN WARP ENGINE CONTROL
     IF YOU HIT THE KLINGON VESSEL, HE IS DESTROYED AND
     CANNOT FIRE BACK AT YOU.  IF YOU MISS, YOU ARE SUBJECT TO
     HIS PHASER FIRE.  IN EITHER CASE, YOU ARE ALSO SUBJECT TO
     THE PHASER FIRE OF ALL OTHER KLINGONS IN THE QUADRANT.

     THE LIBRARY-COMPUTER (\COM\ COMMAND) HAS AN OPTION TO
     COMPUTE TORPEDO TRAJECTORY FOR YOU (OPTION 2)

\SHE\ COMMAND = SHIELD CONTROL
     DEFINES THE NUMBER OF ENERGY UNITS TO BE ASSIGNED TO THE
     SHIELDS.  ENERGY IS TAKEN FROM TOTAL SHIP'S ENERGY.  NOTE
     THAT THE STATUS DISPLAY TOTAL ENERGY INCLUDES SHIELD ENERGY

\DAM\ COMMAND = DAMAGE CONTROL REPORT
     GIVES THE STATE OF REPAIR OF ALL DEVICES.  WHERE A NEGATIVE
     'STATE OF REPAIR' SHOWS THAT THE DEVICE IS TEMPORARILY
     DAMAGED.

\COM\ COMMAND = LIBRARY-COMPUTER
     THE LIBRARY-COMPUTER CONTAINS SIX OPTIONS:
     OPTION 0 = CUMULATIVE GALACTIC RECORD
        THIS OPTION SHOWES COMPUTER MEMORY OF THE RESULTS OF ALL
        PREVIOUS SHORT AND LONG RANGE SENSOR SCANS
     OPTION 1 = STATUS REPORT
        THIS OPTION SHOWS THE NUMBER OF KLINGONS, STARDATES,
        AND STARBASES REMAINING IN THE GAME.
     OPTION 2 = PHOTON TORPEDO DATA
        WHICH GIVES DIRECTIONS AND DISTANCE FROM THE ENTERPRISE
        TO ALL KLINGONS IN YOUR QUADRANT
     OPTION 3 = STARBASE NAV DATA
        THIS OPTION GIVES DIRECTION AND DISTANCE TO ANY
        STARBASE WITHIN YOUR QUADRANT
     OPTION 4 = DIRECTION/DISTANCE CALCULATOR
        THIS OPTION ALLOWS YOU TO ENTER COORDINATES FOR
        DIRECTION/DISTANCE CALCULATIONS
     OPTION 5 = GALACTIC /REGION NAME/ MAP
        THIS OPTION PRINTS THE NAMES OF THE SIXTEEN MAJOR
        GALACTIC REGIONS REFERRED TO IN THE GAME.
```

Synonym

A synonym of a word is another word (in the English language) which has the same, or very nearly the same, meaning. This program tests your knowledge of synonyms of a few common words.

The computer chooses a word and asks you for a synonym. The computer then tells you whether you're right or wrong. If you can't think of a synonym, type "HELP" which causes a synonym to be printed.

You may put in words of your choice in the data statements (510-600). The number following DATA in Statement 500 is the total number of data statements. In each data statement, the first number is the number of words in that statement.

Can you think of a way to make this into a more general kind of CAI program for any subject?

Walt Koetke of Lexington High School, Massachusetts created this program.

```
                SYNONYM

Target

In this program, you are firing a weapon from a spaceship in 3-dimensional space. Your ship, the Starship Enterprise, is located at the origin (0,0,0) of a set of x,y,z coordinates. You will be told the approximate location of the target in 3-dimensional rectangular coordinates, the approximate angular deviation from the x and z axes in both radians and degrees, and the approximate distance to the target.

Given this information, you then proceed to shoot at the target. A shot within 20 kilometers of the target destroys it. After each shot, you are given information as to the position of the explosion of your shot and a somewhat improved estimate of the location of the target. Fortunately, this is just practice and the target doesn't shoot back. After you have attained proficiency, you ought to be able to destroy a target in 3 or 4 shots. However, attaining proficiency might take a while!

The author is H. David Crockett of Fort Worth, Texas.

```
                 TARGET
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

YOU ARE THE WEAPONS OFFICER ON THE STARSHIP ENTERPRISE
AND THIS IS A TEST TO SEE HOW ACCURATE A SHOT YOU
ARE IN A THREE-DIMENSIONAL RANGE.  YOU WILL BE TOLD
THE RADIAN OFFSET FOR THE X AND Z AXES, THE LOCATION
OF THE TARGET IN THREE DIMENSIONAL RECTANGULAR COORDINATES,
THE APPROXIMATE NUMBER OF DEGREES FROM THE X AND Z
AXES, AND THE APPROXIMATE DISTANCE TO THE TARGET.
YOU WILL THEN PROCEEED TO SHOOT AT THE TARGET UNTIL IT IS
DESTROYED!

GOOD LUCK!!

RADIANS FROM X AXIS = 4.46501    FROM Z AXIS = 2.65935

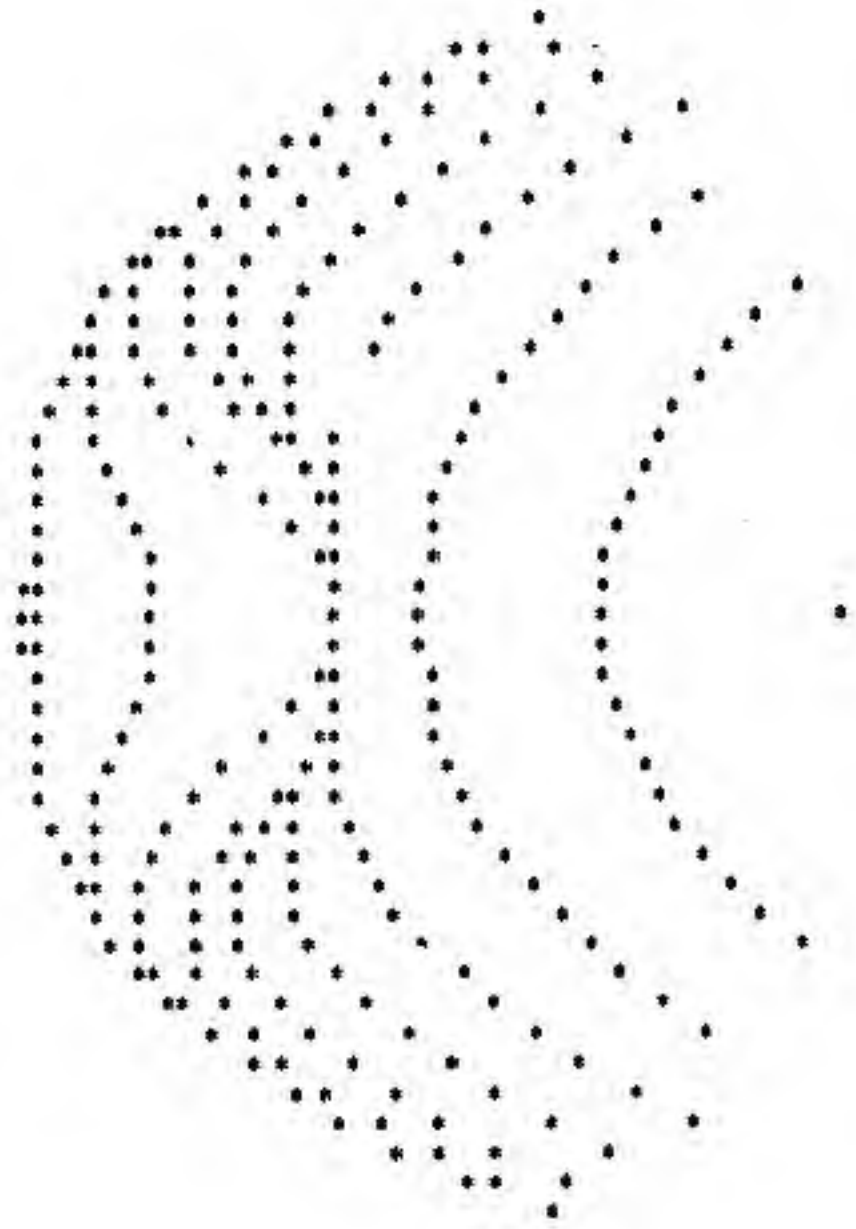
3-D Plot

3-D PLOT will plot the family of curves of any function. The function Z is plotted as "rising" out of the x-y plane with x and y inside a circle of radius 30. The resultant plot looks almost 3-dimensional.

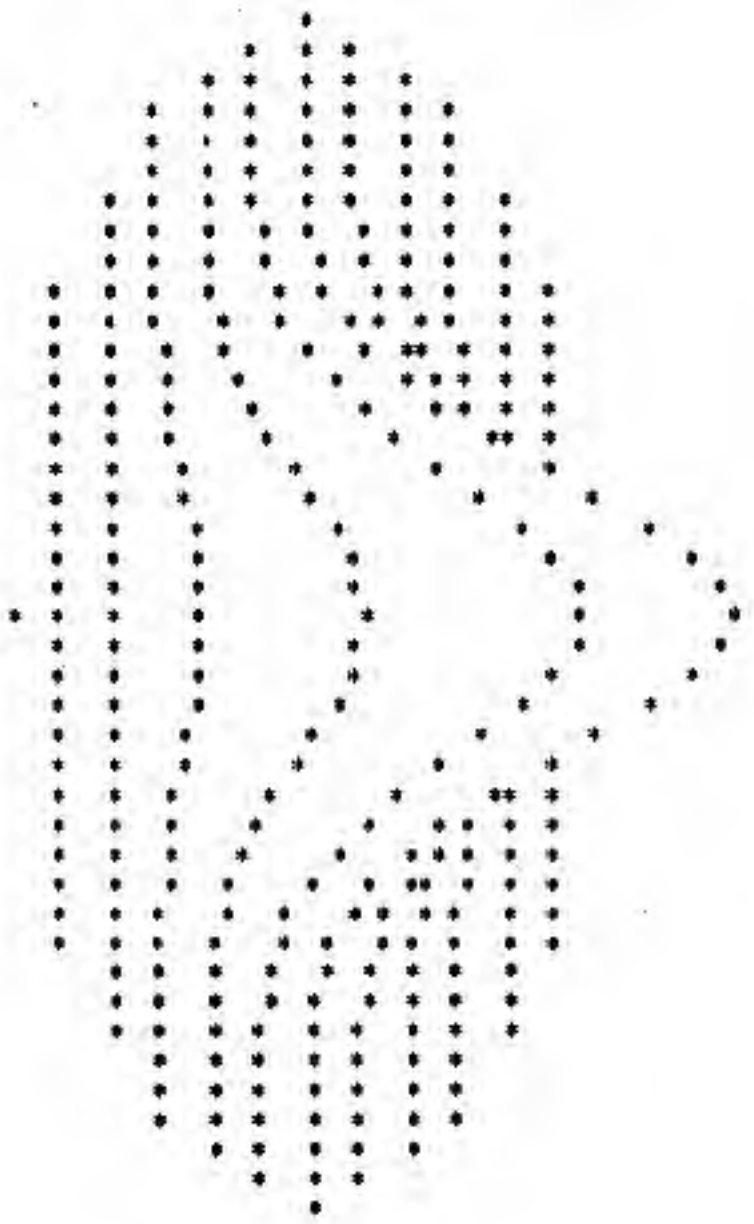
You set the function you want plotted in line 5. As with any mathematical plot, some functions come out "prettier" than others. Here are some that work nicely:

```
5 DEF FNA (Z) = 30*EXP (-Z*Z/100)
5 DEF FNA (Z)= SQR (900.01-Z*Z) *.9-2
5 DEF FNA (Z) = 30*(COS (Z/16)   2
5 DEF FNA (Z) = 30-30*SIN (Z/18)
5 DEF FNA (Z) = 30*EXP (-COS (Z/16) ) -30
   (Bessel function—Summerfeld's Integral)
5 DEF FNA (Z) = 30*SIN (Z/10)
```

The author of this amazingly clever program is Mark Bramhall of DEC.



```
                3D PLOT
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY
```



```
1 PRINT TAB(32);"3D PLOT"

180 PRINT TAB(Z);"*";
190 NEXT Y
200 PRINT
210 NEXT X
300 END
```

3-D Tic-Tac-Toe

3-D TIC-TAC-TOE is the game of tic-tac-toe in a 4x4x4 cube. You must get 4 markers in a row or diagonal along any 3-dimensional plane in order to win.

Each move is indicated by a 3-digit number (digits not seperated by commas), with each digit between 1 and 4 inclusive. The digits indicate the level, column, and row, respectively, of the move. You can win if you play correctly; although, it is considerably more difficult than standard, two-dimensional 3x3 tic-tac-toe.

This version of 3-D TIC-TAC-TOE is from Dartmouth College.

```
                TIC TAC TOE
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES

THE GAME IS TIC-TAC-TOE IN A 4 X 4 X 4 CUBE.
EACH MOVE IS INDICATED BY A 3 DIGIT NUMBER, WITH EACH
DIGIT BETWEEN 1 AND 4 INCLUSIVE.  THE DIGITS INDICATE THE
LEVEL, ROW, AND COLUMN, RESPECTIVELY, OF THE OCCUPIED
PLACE.

TO PRINT THE PLAYING BOARD, TYPE 0 (ZERO) AS YOUR MOVE.
THE PROGRAM WILL PRINT THE BOARD WITH YOUR MOVES INDI-
CATED WITH A (Y), THE MACHINE'S MOVES WITH AN (M), AND
UNUSED SQUARES WITH A ( ).

TO STOP THE PROGRAM RUN, TYPE 1 AS YOUR MOVE.
DO YOU WANT TO MOVE FIRST? YES

Tic Tac Toe

The game of tic-tac-toe hardly needs any introduction. In this one, you play versus the computer. Moves are entered by number:

1 2 3

4 5 6

7 8 9

If you make any bad moves, the computer will win; if the computer makes a bad move, you can win; otherwise, the game ends in a tie.

A second version of the game is included which prints out the board after each move. This is ideally suited to a CRT terminal, particularly if you modify it to not print out a new board after each move, but rather use the cursor to make the move.

The first program was written by Tom Koos while a student researcher at the Oregon Museum of Science and Industry; it was extensively modified by Steve North of Creative Computing. The source of the second game is unknown.

```

Tower

This is a simulation of a game of logic that originated in the middle East. It is sometimes called Pharoah's Needles, but its most common name is the Towers of Hanoi.

Legend has it that a secret society of monks live beneath the city of Hanoi. They possess three large towers or needles on which different size gold disks may be placed. Moving one at a time and never placing a larger on a smaller disk, the monks endeavor to move the tower of disks from the left needle to the right needle. Legend says when they have finished moving this 64-disk tower, the world will end. How many moves will they have to make to accomplish this? If they can move 1 disk per minute and work 24 hours per day, how many years will it take?

In the computer puzzle you are faced with three upright needles. On the leftmost needle are placed from two to seven graduated disks, the largest being on the bottom and smallest on the top. Your object is to move the entire stack of disks to the rightmost needle. However, you may only move one disk at a time and you may never place a larger disk on top of a smaller one.

In this computer game, the disks are referred to by their size — i.e., the smallest is 3, next 5, 7, 9, 11, 13, and 15. If you play with fewer than 7 disks always use the largest, i.e. with 2 disks you would use nos. 13 and 15. The program instructions are self-explanatory. Good luck!

Charles Lund wrote this program while at the American School in the Hague, Netherlands.

```
                TOWERS
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

TOWERS OF HANOI PUZZLE

YOU MUST TRANSFER THE DISKS FROM THE LEFT TO THE RIGHT
TOWER, ONE AT A TIME, NEVER PUTTING A LARGER DISK ON A
SMALLER DISK.

HOW MANY DISKS DO YOU WANT TO MOVE (7 IS MAX)? 3

IN THIS PROGRAM, WE SHALL REFER TO DISKS BY NUMERICAL CODE.
3 WILL REPRESENT THE SMALLEST DISK, 5 THE NEXT SIZE,
7 THE NEXT, AND SO ON, UP TO 15.  IF YOU DO THE PUZZLE WITH
2 DISKS, THEIR CODE NAMES WOULD BE 13 AND 15.  WITH 3 DISKS
THE CODE NAMES WOULD BE 11, 13 AND 15, ETC.  THE NEEDLES
ARE NUMBERED FROM LEFT TO RIGHT, 1 TO 3.  WE WILL
START WITH THE DISKS ON NEEDLE 1, AND ATTEMPT TO MOVE THEM
TO NEEDLE 3.

GOOD LUCK!
```

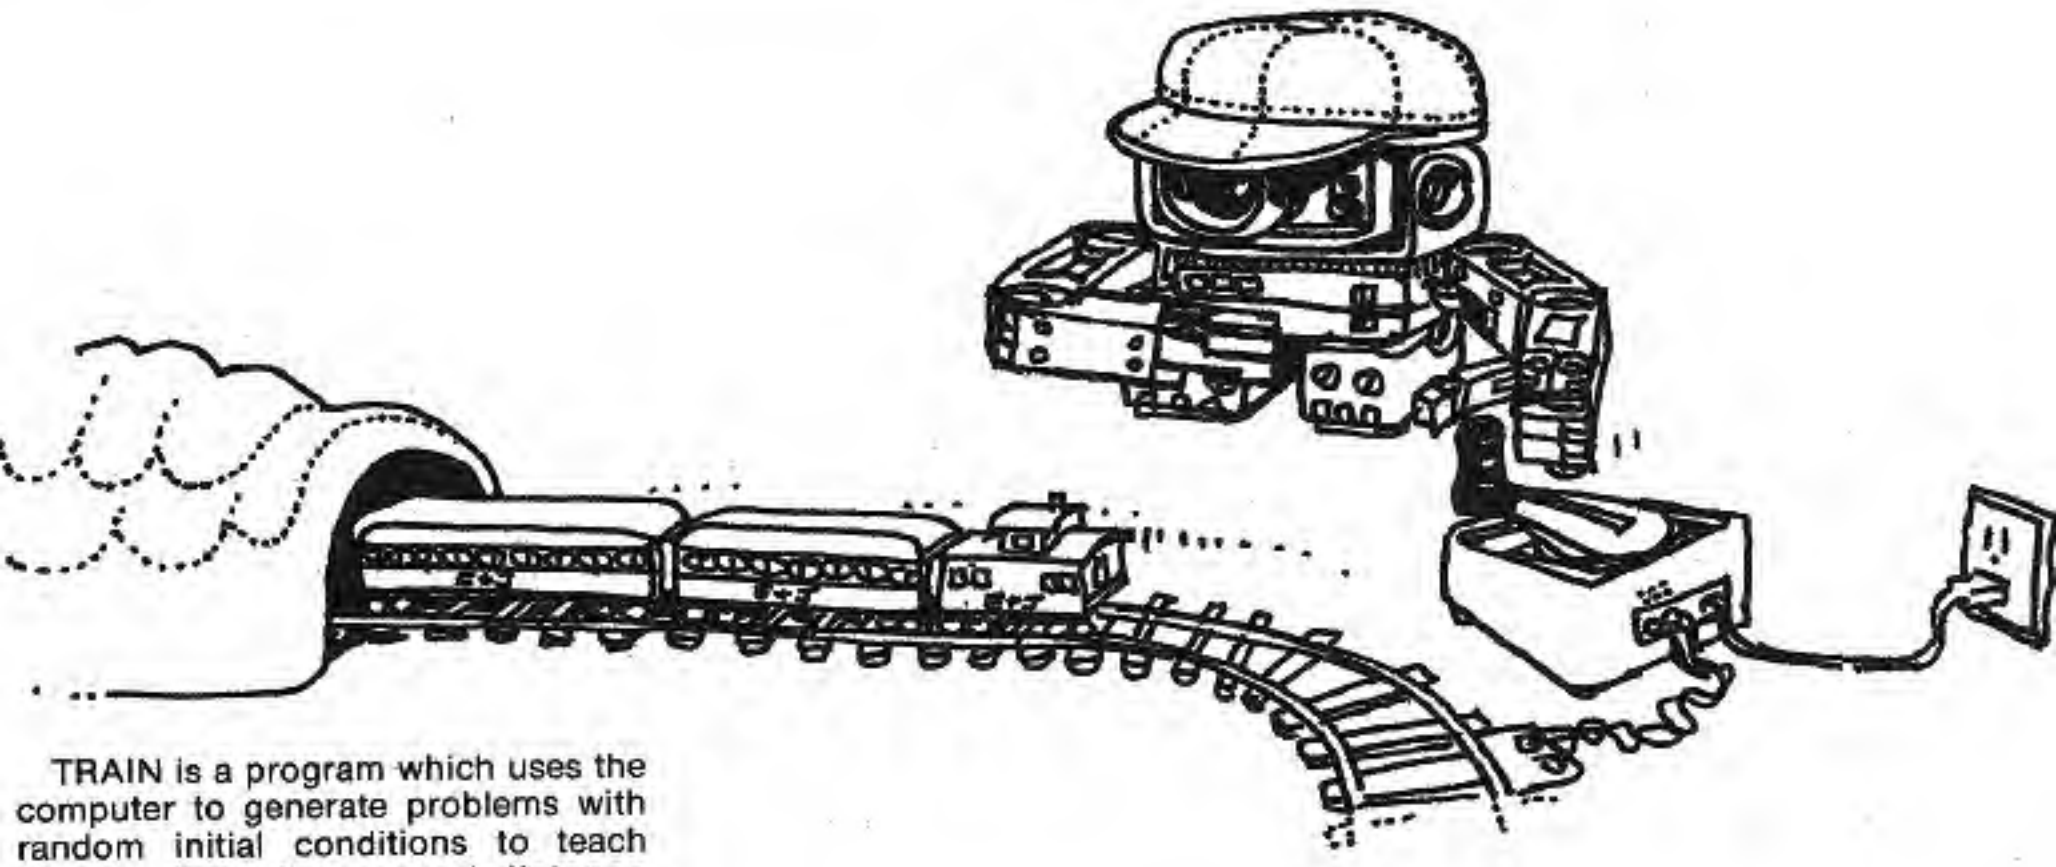
Train



TRAIN is a program which uses the computer to generate problems with random initial conditions to teach about the time-speed-distance relationship (distance = rate x time). You then input your answer and the computer verifies your response.

TRAIN is merely an example of a student-generated problem. Maximum fun (and benefit) comes more from *writing* programs like this as opposed to solving the specific problem posed. Exchange your program with others — you solve their problem and let them solve yours.

TRAIN was originally written in FOCAL by one student for use by others in his class. It was submitted to us by Walt Koetke, Lexington High School, Lexington, Mass.

```
                  TRAIN
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

TIME - SPEED DISTANCE EXERCISE

 A CAR TRAVELING 54 MPH CAN MAKE A CERTAIN TRIP IN
 11 HOURS LESS THAN A TRAIN TRAVELING AT 36 MPH.
HOW LONG DOES THE TRIP TAKE BY CAR? 23
GOOD! ANSWER WITHIN 4 PERCENT.
CORRECT ANSWER IS 22 HOURS.

ANOTHER PROBLEM (YES OR NO)? YES

 A CAR TRAVELING 40 MPH CAN MAKE A CERTAIN TRIP IN
 14 HOURS LESS THAN A TRAIN TRAVELING AT 34 MPH.
HOW LONG DOES THE TRIP TAKE BY CAR? 20
SORRY.  YOU WERE OFF BY 297 PERCENT.
CORRECT ANSWER IS 79.3333 HOURS.

ANOTHER PROBLEM (YES OR NO)? YES

 A CAR TRAVELING 47 MPH CAN MAKE A CERTAIN TRIP IN
 16 HOURS LESS THAN A TRAIN TRAVELING AT 22 MPH.
HOW LONG DOES THE TRIP TAKE BY CAR? 14
GOOD! ANSWER WITHIN 1 PERCENT.
CORRECT ANSWER IS 14.08 HOURS.

ANOTHER PROBLEM (YES OR NO)? NO

Trap

This is another in the family of "guess the mystery number" games. In TRAP the computer selects a random number between I and 100 (or other limit set in statement 20). Your object is to find the number. On each guess, you enter 2 numbers trying to trap the mystery number between your two trap numbers. The computer will tell you if its number is larger or smaller than your trap numbers or if you have trapped the number.

To win the game, you must guess the mystery number by entering it as the same value for both of your trap numbers. You get 6 guesses (this should be changed in statement 10 if you change the guessing limit in statement 20).

After you have played GUESS, STARS, and TRAP, compare the guessing strategy you have found best for each game. Do you notice any similarities? What are the differences? Can you write a new guessing game with still another approach?

TRAP was suggested by a 10-year old when he was playing GUESS. It was originally programmed by Steve Ullman and extensively modified into its final form by Bob Albrecht of People's Computer Co.

```
                  TRAP
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

INSTRUCTIONS? YES
I AM THINKING OF A NUMBER BETWEEN 1 AND 100
TRY TO GUESS MY NUMBER. ON EACH GUESS,
YOU ARE TO ENTER 2 NUMBERS, TRYING TO TRAP
MY NUMBER BETWEEN THE TWO NUMBERS. I WILL
TELL YOU IF YOU HAVE TRAPPED MY NUMBER, IF MY
NUMBER IS LARGER THAN YOUR TWO NUMBERS, OR IF
MY NUMBER IS SMALLER THAN YOUR TWO NUMBERS.
IF YOU WANT TO GUESS ONE SINGLE NUMBER, TYPE
YOUR GUESS FOR BOTH YOUR TRAP NUMBERS.
YOU GET 6 GUESSES TO GET MY NUMBER.

GUESS # 1 ? 25,75
YOU HAVE TRAPPED MY NUMBER.

GUESS # 2 ? 40,60
MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.

GUESS # 3 ? 30,37
YOU HAVE TRAPPED MY NUMBER.

GUESS # 4 ? 34,36
YOU HAVE TRAPPED MY NUMBER.

GUESS # 5 ? 35,35
MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.

GUESS # 6 ? 34,34
YOU GOT IT!!!

TRY AGAIN.

GUESS # 1 ? 30,80
YOU HAVE TRAPPED MY NUMBER.

GUESS # 2 ? 50,60
MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.

GUESS # 3 ? 35,45
MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.

GUESS # 4 ? 32,34
YOU HAVE TRAPPED MY NUMBER.

GUESS # 5 ? 33,33
MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.

GUESS # 6 ? 32,32
YOU GOT IT!!!

23 Matches

In the game of twenty-three matches, you start with 23 matches lying on a table. On each turn, you may take 1, 2, or 3 matches. You alternate moves with the computer and the one who has to take the last match loses.

The easiest way to devise a winning strategy is to start at the end of the game. Since you wish to leave the last match to your opponent, you would like to have either 4, 3, or 2 on your last turn so you can take away 3, 2, or 1 and leave 1. Consequently, you would like to leave your opponent with 5 on his next to last turn so, no matter what his move, you are left with 4, 3, or 2. Work this backwards to the beginning and you'll find the game can effectively be won on the first move. Fortunately, the computer gives you the first move, so if you play wisely, you can win.

After you've mastered 23 Matches, move on to BATNUM and then to NIM.

This version of 23 Matches was originally written by Bob Albrecht of People's Computer Company.

```
                23 MATCHES
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

 THIS IS A GAME CALLED '23 MATCHES'.

WHEN IT IS YOUR TURN, YOU MAY TAKE ONE, TWO, OR THREE
MATCHES. THE OBJECT OF THE GAME IS NOT TO HAVE TO TAKE
THE LAST MATCH.

LET'S FLIP A COIN TO SEE WHO GOES FIRST.
IF IT COMES UP HEADS, I WILL WIN THE TOSS.

HEADS! I WIN! HA! HA!
PREPARE TO LOSE, MEATBALL-NOSE !!

 I TAKE 2 MATCHES
THE NUMBER OF MATCHES IS NOW 21

YOUR TURN -- YOU MAY TAKE 1,2,OR 3 MATCHES.
HOW MANY DO YOU WISH TO REMOVE              ? 3
THERE ARE NOW  18 MATCHES REMAINING.
MY TURN ! I REMOVE 1 MATCHES
THE NUMBER OF MATCHES IS NOW 17

YOUR TURN -- YOU MAY TAKE 1,2,OR 3 MATCHES.
HOW MANY DO YOU WISH TO REMOVE              ? 1
THERE ARE NOW  16 MATCHES REMAINING.
MY TURN ! I REMOVE 3 MATCHES
THE NUMBER OF MATCHES IS NOW 13

YOUR TURN -- YOU MAY TAKE 1,2,OR 3 MATCHES.
HOW MANY DO YOU WISH TO REMOVE              ? 1
THERE ARE NOW  12 MATCHES REMAINING.
MY TURN ! I REMOVE 3 MATCHES
THE NUMBER OF MATCHES IS NOW 9

YOUR TURN -- YOU MAY TAKE 1,2,OR 3 MATCHES.
HOW MANY DO YOU WISH TO REMOVE              ? 1
THERE ARE NOW  8 MATCHES REMAINING.
MY TURN ! I REMOVE 3 MATCHES
THE NUMBER OF MATCHES IS NOW 5

YOUR TURN -- YOU MAY TAKE 1,2,OR 3 MATCHES.
HOW MANY DO YOU WISH TO REMOVE              ? 2
THERE ARE NOW  3 MATCHES REMAINING.
MY TURN ! I REMOVE 2 MATCHES

YOU POOR BOOB ! YOU TOOK THE LAST MATCH ! I GOTCHA !!
HA ! HA! I BEAT YOU !!!

GOOD BYE LOSER!

War

This program plays the card game of War. In War, the card deck is shuffled, then two cards are dealt, one to each player. Players compare cards and the higher card (numerically) wins. In case of a tie, no one wins. The game ends when you have gone through the whole deck (52 cards, 26 games) or when you decide to quit.

The computer gives cards by suit and number, for example, S-7 is the 7 of spades.

```

Weekday

This program gives facts about your date of birth (or some other day of interest). It is not prepared to give information on people born before the use of the current type of calendar, i.e. year 1582.

You merely enter today's date in the form — month, day, year and your date of birth in the same form. The computer then tells you the day of the week of your birth date, your age, and how much time you have spent sleeping, eating, working, and relaxing.

This program was adapted from a GE timesharing program by Tom Kloos at the Oregon Museum of Science and Industry.

Word

WORD is a combination of HANGMAN and BAGELS. In this game, the player must guess a word with clues as to letter position furnished by the computer. However, instead of guessing one letter at a time, in WORD you guess an entire word (or group of 5 letters, such as ABCDE). The computer will tell you if any letters that you have guessed are in the mystery word and if any of them are in the correct position. Armed with these clues, you go on guessing until you get the word or, if you can't get it, input a "?" and the computer will tell you the mystery word.

You may change the words in Data Statements 512 and 513, but they must be 5-letter words.

The author of this program is Charles Reid of Lexington High School, Lexington, Massachusetts.

                  WORD
CREATIVE COMPUTING  MORRISTOWN, NEW JERSEY

I AM THINKING OF A WORD -- YOU GUESS IT.  I WILL GIVE YOU
CLUES TO HELP YOU GET IT.  GOOD LUCK!!

YOU ARE STARTING A NEW GAME...
GUESS A FIVE LETTER WORD? ABCDE
THERE WERE 3 MATCHES AND THE COMMON LETTERS WERE...CAD
FROM THE EXACT LETTER MATCHES, YOU KNOW.....---D-

GUESS A FIVE LETTER WORD? FGHIJ
THERE WERE 0 MATCHES AND THE COMMON LETTERS WERE...
FROM THE EXACT LETTER MATCHES, YOU KNOW.....---D-

IF YOU GIVE UP, TYPE '?' FOR YOUR NEXT GUESS.

GUESS A FIVE LETTER WORD? LMNOP
THERE WERE 1 MATCHES AND THE COMMON LETTERS WERE...N
FROM THE EXACT LETTER MATCHES, YOU KNOW.....--ND-

IF YOU GIVE UP, TYPE '?' FOR YOUR NEXT GUESS.

GUESS A FIVE LETTER WORD? CANDY
THERE WERE 5 MATCHES AND THE COMMON LETTERS WERE...CANDY
FROM THE EXACT LETTER MATCHES, YOU KNOW.....CANDY
YOU HAVE GUESSED THE WORD.  IT TOOK 4 GUESSES!

WANT TO PLAY AGAIN? YES
YOU ARE STARTING A NEW GAME...
GUESS A FIVE LETTER WORD? ABCDE
THERE WERE 0 MATCHES AND THE COMMON LETTERS WERE...
FROM THE EXACT LETTER MATCHES, YOU KNOW.....-----

IF YOU GIVE UP, TYPE '?' FOR YOUR NEXT GUESS.

GUESS A FIVE LETTER WORD? FGHIJ
THERE WERE 2 MATCHES AND THE COMMON LETTERS WERE...FI
FROM THE EXACT LETTER MATCHES, YOU KNOW.....F----

GUESS A FIVE LETTER WORD? MNOPS
THERE WERE 1 MATCHES AND THE COMMON LETTERS WERE...S
FROM THE EXACT LETTER MATCHES, YOU KNOW.....F----

IF YOU GIVE UP, TYPE '?' FOR YOUR NEXT GUESS.

GUESS A FIVE LETTER WORD? FISTS
THERE WERE 5 MATCHES AND THE COMMON LETTERS WERE...FISST
FROM THE EXACT LETTER MATCHES, YOU KNOW.....FI---

GUESS A FIVE LETTER WORD? FIRST
THERE WERE 5 MATCHES AND THE COMMON LETTERS WERE...FIRST
FROM THE EXACT LETTER MATCHES, YOU KNOW.....FIRST
YOU HAVE GUESSED THE WORD.  IT TOOK 5 GUESSES!

WANT TO PLAY AGAIN? NO

#1 in Software and Applications

Sure, we could tell you we're the premier magazine of computer applications and software for both beginners and experts, but our readers say it even better.

Alvin Toffler, author of *Future Shock* and the *Third Wave* says, "I read **Creative Computing** not only for information about how to make the most of my own equipment but to keep an eye on how the whole field is emerging."

David Gerrold of Star Trek fame says, "**Creative Computing** with its unpretenotious down-to-earth lucidity encourages the computer user to have fun. **Creative Computing** makes it possible for me to learn basic programming skills and use the computer better than any other source."

Order today at no risk. We'll give you a complete refund if you're not satisfied. But we're sure you'll want to join over 95,000 subscribers like Ann Lewin, Director of the Capital Children's Museum who says, "**Creative Computing** helps demystify the computer. It's articles are helpful, humorous and humane. The world needs **Creative Computing**."
